Vegetation Clearing and Fauna Management Plan

Vegetation Clearing - Notes

INTRODUCTION

The *Environmental Management Division* of the **Saunders Havill Group** was engaged by **Teviot Downs Estate Pty Ltd** to prepare a *Vegetation Clearing and Fauna Management Plan (VCFMP)* for the Teviot Downs Estate on Pub Lane, Greenbank. Contextually, the site is located approximately 6 km west of Mount Lindesay Highway (Route 13).

The purpose of this plan is to manage the vegetation removal process and the protection of fauna species over the proposed development in accordance with **Economic Development Queensland (EDQ)** requirements for the *Greater Flagstone Priority Development Area*. The clearing works will follow the general principal for vegetation clearing documented on this sheet.

This *VCFMP* has been produced by overlaying existing site data with proposed works to determine impacts and disturbance:

1. GPS tree plot of native trees
2. Development Layout - the extent of development (roads/lots) (**RPS Group Pty Ltd**)

Numerous vegetation surveys were carried out during October 2015 over the entire development area to locate all trees.

This *VCFMP* provides the interim approval for removal of trees within the approved road and allotment extents for the Teviot Downs Project. Some additional clearing is likely to be required for aspects of the project not yet resolved such as detailed earthworks,

infrastructure, bush fire management and final internal parklands. In these locations which occur primarily around the periphery of the core development zone additional tree clearing will need to be clarified with detailed engineering approvals.

CLEARING PHASES AND PROCESS

The following stages are required for clearing to be undertaken on this property and a copy of this *VCFMP* must be present with the clearing contractor onsite:

PHASE 1 - Tree Protection Fencing to be installed prior to the commencement of any clearing works on the site. Tree protection fencing is to be located at or beyond 12 x diameter at breast height (DBH) unless approved by the appointed Arborist.

PHASE 2 - Pre-start Meeting (if required)

Fencing shall be in place at the time of the official pre-start meeting for inspection ~~and sign-off by EDQ Officers.~~ in accordance with this vegetation clearing and fauna management plan and the conditions of approval.

PHASE 3 - Fauna Inspections and Management

Undertake necessary fauna management requirements prior to clearing works - as a minimum this should include the specifications listed on this sheet and acknowledge specific **EDQ** approval requirements.

PHASE 4 - Undertake Bulk Clearing

Wholesale removal of vegetation once approved for removal by qualified fauna spotter. Clearing will occur in the direction outlined in sheet 12 of this *VCFMP* and managed by

the appointed fauna spotter to allow all fauna unimpeded movement off the site and towards the vegetated area of the eastern neighbouring allotment. All trees to be removed shall be mulched onsite for future use within the project area.

ACCESS AND STOCKPILING

A stockpiling location is to be designated in an easily accessible area. The location will adjoin the entry to the site allowing for material to be easily delivered and stored. Where possible, cleared native vegetation that is free of weeds will be chipped and stored for re-use on other parts of the site (e.g. rehabilitation / embankment stabilisation).

MAINTENANCE

After tree clearing works on site, follow up maintenance works should be carried out on all retained vegetation. An analysis of the vegetation's health and growth should be undertaken to determine specific maintenance needs.

Tree Protection Fencing Detail

DISCLAIMER:

THESE PLANS HAVE BEEN PREPARED FOR THE EXCLUSIVE USE OF THE CLIENT. SAUNDERS HAVILL GROUP CANNOT ACCEPT RESPONSIBILITY FOR ANY USE OF OR RELIANCE UPON THE CONTENTS OF THESE DRAWINGS BY ANY THIRD PARTY.

CONFIRM ALL DIMENSIONS ON SITE PRIOR TO CONSTRUCTION AND DO NOT SCALE FROM THE DRAWINGS. ALL DIMENSIONS ARE IN MILLIMETRES. ANY DISCREPANCIES SHOULD BE CLARIFIED IN WRITING WITH SAUNDERS HAVILL GROUP PRIOR TO THE COMMENCEMENT OF WORK.

PRIOR TO ANY DEMOLITION, EXCAVATION OR CONSTRUCTION ON SITE, THE RELEVANT AUTHORITY SHOULD BE CONTACTED FOR FURTHER UNDERGROUND SERVICES AND SITE INVESTIGATIONS OF ALL SERVICES.

Vegetation Clearing and Fauna Management Plan

Fauna Management - Notes

INTRODUCTION

The Fauna Management specification on this *VCFMP* is designed to protect native animals and control and manage impacts during clearing activities. The fauna management specifications and principles incorporated in this VCFMP Series applies generically to all native animals and focus on avoiding conflicts and incorporating measures to minimize disturbance. Compliance with this section of the VCFMP plan is compulsory and incorporates the use of expert consultants including a Fauna Spotter (holding a valid Wildlife Rehabilitation Permit issued by the **Department of Environment and Heritage Protection**).

FAUNA IMPACTS

Clearing of vegetation provides an obvious source of impact to existing habitat and animal safety. More specifically the existing vegetation provides habitat, movement and protection opportunities for some fauna through both regrowth and canopy trees. These opportunities are to be altered during and post site clearing works.

CLEARING IMPACTS (through road and allotment areas)

- Direct removal of site vegetation
- Loss of habitat
- Noise, vibration and dust
- Erosion and sedimentation
- Threats associated with open cuts etc. and fauna entrapment

Fauna Management Schedule

1.0 PRE CLEARING				
Ref:	Management Item	Responsibility	Timing	Reporting
1.1	TEMPORARY FENCING Prior to the commencement of works and to be inspected by Council or the site Environmental Coordinator temporary star picket and strand wire fencing shall be installed around the 'Environmental Protection Zone' designated for retention (as per approved plan <i>DA 1.02</i>). ▪ Fencing shall be fauna friendly ▪ No clearing, stockpiling, site access, earthworks, storage, etc. is to occur beyond the fencing. ▪ Only approved weed management, landscape and revegetation works to occur beyond the temporary protection fencing ▪ Fencing to be reinstated immediately if damaged or knocked down ▪ Fencing to remain until the completion of all site bulk earthworks and removed just prior to on -maintenance.	SITE SUPERVISOR	Prior to the commencement of construction	Inspected by Council or the Environmental Site Coordinator
1.2	CONTRACTOR EDUCATION & AWARENESS All site contractors and subcontractors will be made aware of their responsibilities to protect native fauna. The Fauna Management notes on this VCFMP is provided as a working document to assist on-site management and protection of native animals. This generally will form part of education and training on a broader work place health and safety but as a minimum will include: ▪ Copy of VCFMP kept on-site (Site Office). ▪ General education and awareness notification of contractors and sub-contractors involved in activities potentially impacting native animals as part of site induction – contractors must know the location of the VCFMP, key phone numbers and who to report to if they breach the VCFMP. ▪ A list of relevant contact phone numbers as listed on these drawings is kept in a visible and accessible location in the site office	SITE SUPERVISOR / THE PROPONENT	Prior to the commencement of construction and as part of the site induction for new staff and sub-contractors	SITE SUPERVISOR
2.0 VEGETATION CLEARING				
1.1	SPOTTER / RELOCATOR Immediately prior to the commencement of clearing of native vegetation a daily visual inspection of the area must be carried out by the fauna spotter-catcher. Furthermore, the fauna spotter-catcher is to be present on site during all clearing operations to supervise and direct clearing works, and to respond to any situations that may arise in relation to fauna. In the event of an animal being located, an area of 5m radius should be established around the tree excluding machinery from the area until the animal has relocated (usually overnight). If an animal requires relocating this must be undertaken by a suitable qualified fauna expert recognized by the Department of Environment & Heritage . For some fauna a permit will be required. If vegetation is left stockpiled overnight, the Fauna Spotter -Catcher must inspect the vegetation prior to chipping or removal from site. Any native fauna orphaned or injured by the development process must be reported to the Department of Environment & Heritage (1300 130 372) or RSPCA (1300 264 625). The Site Supervisor is responsible for the safe management of site fauna and implementation of these specific fauna requirements SPECIFIC KOALA MANAGEMENT NOTES A Koala Spotter is a person who holds a tertiary qualification in Biology or Zoology, or who is demonstrably experienced in the identification and location of Koalas in their natural habitat. For example, a koala keeper employed by a licensed Wildlife exhibitor (i.e. a zoo) may be capable of demonstrating competence in locating Koala's. Prior to the commencement and during felling operations, it is the responsibility of the Koala spotter to be present at the site of felling operations identify any tree at the site within which a Koala is present, as well as any tree that has a crown which is intermeshed or overlapping with such a tree; and advise the person who is authorised to conduct the felling operation, or that persons representative, of the precise location of each such tree Management Item. CLEARING PATTERN / FAUNA FLUSHING Clearing within each area is to occur as per the requirements and staging listed on <i>sheet 13</i> ensuring native animals are flushed towards the safe haven indicated on the sheet. Principles of the clearing plan include: • Clearing occurs once fauna spotter-catcher gives sign off the site is clear of significant native species. • Clearing commences in areas of least connectivity and significance and flushing towards retention areas • Clearing is sequenced in accordance with plans ensure adequate timing for fauna to relocate towards retention areas. • The staging and direction of clearing as proposed in the Individual Clearing Plans may alter if specified on-site by Spotter-catcher. At the completion of operational works, and prior to the sealing of survey plans for the relevant stage, the Fauna Spotter -Catcher must provide certification to Council's Ecologist that all works were undertaken in accordance with these fauna management requirements.	SITE SUPERVISOR	Prior to the commencement of construction	Inspected by Council or the Environmental Site Coordinator
