Vegetation Clearing and Fauna Management Plan - *Vegetation Clearing Notes*

INTRODUCTION

The *Environmental Management Division* of the **Saunders Havill Group** was engaged by **Pacifiq** to prepare a *Vegetation Clearing & Fauna Management Plan (VCFMP)* for the selective removal of vegetation from within designated UXO survey and remediation areas within the Wyatt Road Project on Lot 3 on S311896.

The site retains a high level MCU approval and an abundance of ecological surveys and reports have been completed over the broader development area inclusive of the UXO remediation zones. Preliminary UXO surveys and decommissioning has already occurred in accessible areas within the project site, however the accuracy of detection surveys and contaminant removal has been hindered in selected areas by native and weed vegetation. Clearing is limited to those locations within the proposed development extent where identified by the project UXO expert consultant as requiring remediation.

To assist in the spatial depiction of clearing extents Ecologists from the **Saunders Havill Group** completed a Stadia-metric tree survey using **Trimble** Antenna based GPS unit. The survey collected the following data on trees within and adjoining the UXO remediation extent as provided by the project UXO expert consultant:

- Reference Point and Location
- Botanical Name / Common Name
- Trunk DBH
- AS4970-2009 – Tree Protection Zone
- Height and Spread
- Canopy and Trunk Condition Comments
- Fauna and Habitat Values and Details

The purpose of this *VCFMP* is to manage the selective vegetation removal process and the protection of fauna species over the remaining vegetation within works and non-works

areas of the Flinders Project. This *VCFMP* has been produced by overlaying existing site data with proposed UXO areas to determine impacts and disturbance:

1. GPS surveyed tree plot of native trees over the application area
2. Identification and flagging of higher value natives (i.e. DBH>400mm, hollows or habitat features etc.) within UXO Areas
3. Site contours and cadastral boundaries
4. UXO remediation areas as provided in coordinates by the project UXO expert consultant.

CLEARING PHASES AND PROCESS

The following stages are required for clearing to be undertaken on this property and a copy of this *VCFMP* must be present with the clearing contractor onsite. Generally clearing occurs within open areas or amongst juvenile regrowth. Where UXO remediation is required in vegetated areas on site gully lines or drainage depressions clearing methods shall retain the grass layer and avoid exposing soil.

PHASE 1 - Tree Protection Fencing to be installed prior to the commencement of any clearing works on the site. Tree protection fencing is to be located at or beyond 12 x diameter at breast height (DBH) for trees adjacent to the remediation project if required. Not all locations within this clearing zone occur within heavily bushland areas and thus fencing is not always advocated within the documents.

PHASE 2 - Pre-start Meeting
Fencing and or other measures shall be in place at the time of the official pre-start meeting for inspection.

PHASE 3 - Fauna Inspections and Management
Undertake necessary fauna management requirements prior to clearing works – Refer Fauna Management specifications (*Sheet 3*) and the separate *Fauna Management Plan*.

PHASE 4 - Undertake Bulk Clearing

Undertake wholesale removal of vegetation once approved for removal by qualified fauna spotter. Clearing will occur in the direction outlined in this *VCFMP* and managed by the appointed fauna spotter to allow all fauna unimpeded movement out of the works areas.

The following procedures are necessary to mitigate the potential for bank instability, erosion and sedimentation as a result of clearing in and adjoining site drainage lines:

- No heavy machinery clearing within 5 m of the top of bank of drainage lines - refer State Code 16: AO 11.2(2)
- No heavy machinery utilised for clearing between the high banks of a drainage feature
- All clearing undertaken within the above areas is to retain tree stumps within bank profiles for stability purposes wherever possible
- Existing tracks and crossings utilised for heavy machinery access across drainage lines wherever possible

ACCESS AND STOCKPILING

A number of potential stockpiling locations are shown within the clearing zone. Additional stockpiling locations maybe required or on-site assessment may determine alternative locations to those shown on the *VCFMP*. Site vegetation is to be mulched and used un revegetation or stabilisation works as part of the ultimate development phases of the project.

Final stockpiling locations can occur at the discretion of the site clearing contractor provided revised locations do not result in any additional tree removal, are not within any drainage features or overland flow paths, are approved by the fauna spotter catcher and located to minimise nuisance on neighbouring land uses or existing access and to be designated in an easily accessible area outside of TPZs. Where possible, cleared native vegetation that is free of weeds will be chipped and stored for re-use on other parts of the

Vegetation Clearing and Fauna Management Plan - Fauna Management Notes

INTRODUCTION

The Fauna Management specification on this VCFMP is designed to protect native animals and control and manage impacts during clearing activities. The fauna management specifications and principles incorporated in this VCFMP Series applies generically to all native animals and focus on avoiding conflicts and incorporating measures to minimize disturbance. Compliance with this section of the VCFMP plan is compulsory and incorporates the use of expert consultants including a Fauna Spotter (holding a valid Wildlife Rehabilitation Permit issued by the Department of Environment and Heritage Protection).

FAUNA IMPACTS

Clearing of vegetation provides an obvious source of impact to existing habitat and animal safety. More specifically the existing vegetation provides habitat, movement and protection opportunities for some fauna through both regrowth and canopy trees. These opportunities are to be altered during and post site clearing works.

CLEARING IMPACTS (through road and allotment areas)

- Direct removal of site vegetation
- Loss of habitat
- Noise, vibration and dust
- Erosion and sedimentation
- Threats associated with open cuts etc. and fauna entrapment

Fauna Management Schedule

1.0 PRE CLEARING				
Ref:	Management Item	Responsibility	Timing	Reporting
1.1	TEMPORARY FENCING Prior to the commencement of works and to be inspected by EDQ or the site Environmental Coordinator AS 9470 Temporary Protection Fencing shall be installed around the 'Tree Protection Zone' designated for retention (as per detail sheets). ▪ Fencing shall be fauna friendly ▪ No clearing, stockpiling, site access, earthworks, storage, etc. is to occur within the temporary protection fencing. ▪ Only approved weed management works to occur within the temporary protection fencing ▪ Fencing to be reinstated immediately if damaged or knocked down, any damage to retained trees to be immediately reported to Project Arborist. ▪ Fencing to remain until the completion of all site bulk earthworks.	SITE SUPERVISOR	Prior to the commencement of construction	Inspected by Council or the Environmental Site Coordinator
1.2	CONTRACTOR EDUCATION & AWARENESS All site contractors and subcontractors will be made aware of their responsibilities to protect native fauna. The Fauna Management notes on this VCFMP is provided as a working document to assist on-site management and protection of native animals. This generally will form part of education and training on a broader work place health and safety but as a minimum will include: ▪ Copy of VCFMP kept on-site (Site Office). ▪ General education and awareness notification of contractors and sub-contractors involved in activities potentially impacting native animals as part of site induction – contractors must know the location of the VCFMP, key phone numbers and who to report to if they breach the VCFMP. ▪ A list of relevant contact phone numbers as listed on these drawings is kept in a visible and accessible location in the site office	SITE SUPERVISOR / THE PROPONENT	Prior to the commencement of construction and as part of the site induction for new staff and sub-contractors	SITE SUPERVISOR
2.0 VEGETATION CLEARING				
1.1	SPOTTER / RELOCATOR Immediately prior to the commencement of clearing of native vegetation a daily visual inspection of the area must be carried out by the fauna spotter-catcher. Furthermore, the fauna spotter-catcher is to be present on site during all clearing operations to supervise and direct clearing works, and to respond to any situations that may arise in relation to fauna. In the event of an animal being located, an area of 5m radius should be established around the tree excluding machinery from the area until the animal has relocated (usually overnight). If an animal requires relocating this must be undertaken by a suitable qualified fauna expert recognized by the Department of Environment & Heritage. For some fauna a permit will be required. If vegetation is left stockpiled overnight, the Fauna Spotter-Catcher must inspect the vegetation prior to chipping or removal from site. Any native fauna orphaned or injured by the development process must be reported to the Department of Environment & Heritage (1300 130 372) or RSPCA (1300 264 625). The Site Supervisor is responsible for the safe management of site fauna and implementation of these specific fauna requirements SPECIFIC KOALA MANAGEMENT NOTES A Koala Spotter is a person who holds a tertiary qualification in Biology or Zoology, or who is demonstrably experienced in the identification and location of Koalas in their natural habitat. For example, a koala keeper employed by a licensed Wildlife exhibitor (i.e. a zoo) may be capable of demonstrating competence in locating Koala's. Prior to the commencement and during felling operations, it is the responsibility of the Koala spotter to be present at the site of felling operations identify any tree at the site within which a Koala is present, as well as any tree that has a crown which is intermeshed or overlapping with such a tree; and advise the person who is authorised to conduct the felling operation, or that persons' representative, of the precise location of each such tree Management Item. CLEARING PATTERN / FAUNA FLUSHING Clearing within each individual area is to occur as per the direction indicated on sheet 31 ensuring native animals are flushed safely towards adjacent vegetated area. Principles of the clearing plan include: • Clearing occurs once fauna spotter-catcher gives sign off the section to be cleared that day is clear of significant native species. • Clearing commences within the proposed UXO works area and flushed towards adjacent vegetated areas. • The direction of clearing as proposed may alter if specified on-site by Spotter-catcher. At the completion of operational works, and prior to the sealing of survey plans for the relevant stage, the Fauna Spotter-Catcher must provide certification to EDQ that all works were undertaken in accordance with these fauna management requirements.	SITE SUPERVISOR	Prior to the commencement of construction	Inspected by Council or the Environmental Site Coordinator

Vegetation Clearing & Fauna Management Plan	
DATE: 16/10/2017	CHECKED: MS
CLIENT REF: 8020	DRAWN: TC
DRAWING No: 8020 E 17 UXO VCFMP B	

Legend

-  Tree to retain outside UXO remediation areas
 Tree to remove from within UXO remediation area
 Stockpile location (indicative)
 Weed & Juvenile regrowth areas to remove for UXO remediation
 Gully lines and/or drainage depressions - No heavy machinery to be used in these areas. Remediation to avoid soil exposure
 Contours (Lidar)
 UXO remediation works boundary
 Cadastre Boundaries

Vegetation Clearing & Fauna Management Plan - *Details (sheet 23)*
