Vegetation Management Plan

Vegetation Clearing - Notes

INTRODUCTION

The *Environmental Management Division* of the **Saunders Havill Group** was engaged by **Pacifiq** to prepare a *Vegetation Management Plan (VMP)* for the removal of vegetation to facilitate a master planned residential development at Bushman Drive, Jimboomba.

The purpose of this *VMP* is to manage the vegetation removal process as required for an Operation Works application to **Economic Development Queensland** under the *Greater Flagstone Urban Development Area Development Scheme*. These works require the approval for clearing of vegetation to facilitate civil earthworks for this project. The clearing works will follow the general principal for vegetation clearing documented on this sheet.

To better assign a tree retention or tree removal status, Ecologists from the **Saunders Havill Group** completed a detailed tree plot survey using Trimble GNSS receiver GPS units. The survey collected the following data on trees within and adjoining the earthworks extent as provided by the project engineers (**Mortons Urban Solutions**):

- Reference Point – Eastings/Northings Location
- Botanical Name / Common Name
- Trunk DBH

- AS4970-2009 – Tree Protection Zone
- Height and Spread
- Canopy and Trunk Condition Comments
- Fauna and Habitat Values and Details

CLEARING PHASES AND PROCESS

The following stages are required for clearing to be undertaken on this property and a copy of this *VCMP* must be present with the clearing contractor on-site:

PHASE 1 – Confirm that trees identified in the retention area are suitable for installation of Nest boxes. All nest boxes to be installed and all reporting requirements completed prior to commencement of clearing works.

PHASE 2 - Tree Protection Fencing to be installed prior to the commencement of any clearing works on the site. Tree protection fencing is to be located at or beyond 12 x diameter at breast height (DBH) unless approved by an appointed Arborist around trees designated for retention or as per the locations shown in this drawing package (refer Fencing Note).

PHASE 3 - Pre-start Meeting

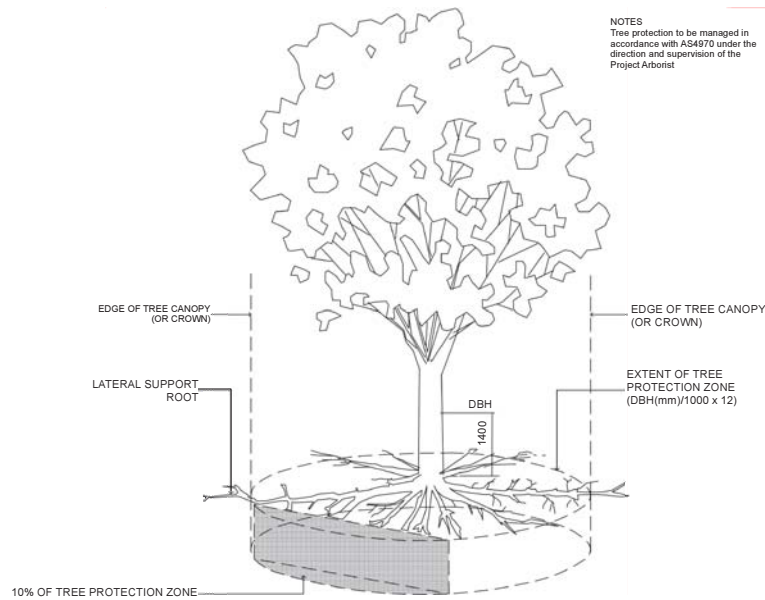

Fencing shall be inspected at the time of the official pre-start meeting by the environmental coordinator for sign-off that clearing works can proceed.

PHASE 4 - Fauna Inspections and Management

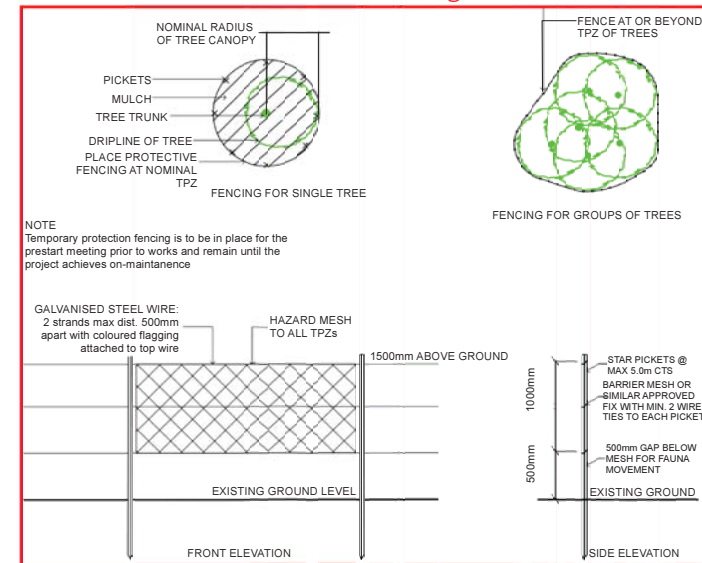

Undertake necessary fauna management requirements prior to clearing works – Refer to the *Fauna Management Plan* for details.

PHASE 5 - Undertake Clearing

Undertake removal of vegetation once approved for removal by a qualified fauna spotter. Clearing will occur in a direction outlined in *Sheet 28* of the *VMP* and managed by the appointed fauna spotter to allow all fauna unimpeded movement towards the central waterway retention area. The contractor is to follow tree felling directions of any third party (i.e. fauna spotter/project Arborist) on site and stockpile selected material for re-use following completion of the contract.

Tree Protection Fencing Detail

Vegetation Management Plan

Nest Box Strategy - Notes

INTRODUCTION

This Nest Box Strategy has been prepared by **Saunders Havill Group** (SHG) for **Pacifiq** to meet Section 5.4 of the Fauna Management Plan (FMP) and Item 11c of the Further Issues Letter issued by **Economic Development Queensland** (EDQ) on 7th December 2018 (Ref: DEV2018/988).

This strategy is designed to provide a functional alternative to natural hollows occurring in the development area at Wyatt Road/Bushman Drive, Jimboomba, and to enhance wildlife habitat along the waterway corridor that occurs within the property (the receiving area).

To meet environmental strategies outlined in the PDA Guideline 14—The proponent is required to install one (1) nest box for each natural hollow that is removed. A total of fifty-eight (58) natural hollows were identified within the works area during field surveys conducted by SHG in 2018, therefore a total of 58 nest boxes will be installed at the receiving area in accordance with this strategy and Section 11c of the Further Issues Letter.

Natural tree hollows form an important part of many South East Queensland (SEQ) ecosystems. There are at least 134 fauna species in SEQ that are dependent on hollows for survival—including protection from weather and predators and a safe place to eat, sleep and raise young. Many more fauna species are likely to use hollows opportunistically. Natural hollows can take between 80 to 350+ years to develop and form a range of sizes and shapes over time that suit the requirements of different fauna species. Removal of hollow-bearing trees should therefore be considered only as a last option.

In circumstances where clearing of hollow-bearing trees cannot be avoided, nest boxes can provide a functional alternative to natural tree hollows. The lifespan of a nest box is relatively short (usually up to 15 years) compared to natural hollows, and should be complimented by bushland regeneration, to ensure long-term provision of hollow habitat.

Nest boxes design and installation is highly specialised to suit individual fauna species requirements, and requires: prior knowledge of hollow-dependent fauna at the development and receiving areas; and nest box specifications for target fauna species. Ongoing monitoring and maintenance is also essential to ensure nest boxes are achieving beneficial outcomes for fauna, particularly threatened species.

There are currently no regulatory guidelines in Queensland for the implementation, monitoring and maintenance of nest boxes. The Information in this strategy is based on best knowledge and practices provided on Moreton Bay Regional Council, Redlands City Council and Ipswich City Council online services, and “Nest boxes for wildlife, a practical guide” by Alan and Stacey Franks (2015). The information is intended as a guide and is subject to alteration by the qualified nest box ecologist working on site.

FAUNA HABITAT ASSESSMENT - DESKTOP

Desktop assessments were undertaken in 2018 prior to field assessments at the Bushman Drive property, and identified the following hollow-using (obligate and opportunistic) fauna species as having occurred within 2km:

Scientific Name	Common Name	Status
<i>Litoria spp.</i>	Tree Frogs	Common
<i>Acanthiza reguloides</i>	Buff-rumped Thornbill	Common
<i>Anas gracilis</i>	Grey Teal	Common
<i>Anas superciliosa</i>	Pacific Black Duck	Common
<i>Cacatua galerita</i>	Sulphur-crested Cockatoo	Common
<i>Laughing Kookaburra</i>	Laughing Kookaburra	Common
<i>Eolophus roseicapillus</i>	Galah	Common
<i>Eurystomus orientalis</i>	Dollarbird	Common
<i>Pardalotus striatus</i>	Striated Pardalote	Common
<i>Taeniopygia bichenovii</i>	Double-barred Finch	
<i>Todiramphus spp.</i>	Kingfisher spp.	Common
<i>Trichoglossus spp.</i>	Lorikeet spp.	Common

<i>Ninox boobook</i>	Southern Boobook	Common
<i>Chalinolobus gouldii</i>	Gould’s Wattleed Bat	Common
<i>Petaurus breviceps</i>	Sugar Glider	Common
<i>Phascogale tapatata</i>	Brush-tailed Phascogale	Common
<i>Pseudocheirus peregrinus</i>	Common Ringtail Possum	Common
<i>Trichosurus vulpecula</i>	Common Brushtail Possum	Common

Incidental diurnal fauna surveys undertaken by SHG ecologists between June and July 2018, and a targeting nocturnal survey undertaken in January 2019, detected presence of the following hollow-using fauna at the Bushman Road property:

Scientific name	Common name
<i>Anas superciliosa</i>	Pacific Black Duck
<i>Cacatua galerita</i>	Sulphur-crested Cockatoo
<i>Dacelo novaeguineae</i>	Laughing Kookaburra
<i>Glossopsitta pusilla</i>	Little Lorikeet
<i>Ninox boobook</i>	Southern Boobook
<i>Trichoglossus chlorolepidotus</i>	Scaly-breasted Lorikeet
<i>Trichoglossus haematodus</i>	Rainbow Lorikeet
<i>Tyto alba</i>	Barn owl
<i>Chalinolobus gouldii</i>	Gould’s Wattleed Bat
<i>Petaurus breviceps</i>	Sugar Glider
<i>Pseudocheirus peregrinus</i>	Common Ringtail Possum
<i>Scotorepens greyii</i>	Little Broad-nosed Bat
<i>Taeniopygia bichenovii</i>	Double-barred Finch
<i>Trichosurus vulpecula</i>	Common Brushtail Possum
<i>Vespadelus darlingtoni</i>	Large Forest Bat

NEST BOX SPECIFICATIONS

Nest box design determines the type of fauna that can/will use a nest box. Factors such as entrance size and shape, depth, degree of insulation, and location greatly affect the nest box occupancy. For example, nest boxes with small entrance holes (20-30mm diameter) are used by Micro-bats and small Gliders, whereas larger entrance holes (100-200mm diameter) are required by Brushtail Possums, larger Parrots and Owls.

A range of nest box types should be installed within the nest box receiving area, keeping in mind that most species utilise more than one hollow across their home range. For example, Squirrel Gliders require a minimum of five (5) hollows per colony (2-9 individuals). Many species will also change residence according to season therefore it is important to provide boxes for winter and summer.

Nest box specifications should reflect hollow-using fauna observed at the works area, or hollow-using fauna known, or expected to occur at the receiving area, particularly less common and threatened native fauna species.

A total of fifty-eight nest boxes are required to be installed within the 8.4 hectare water corridor (approximately 7 per hectare), and should comprise the following nest box designs:

- Microbat roost box x 10
- Small owl box for Barn Owl & Southern Boobook x 6
- Brushed-tail Phascogale x 6
- Sugar Glider box x 6
- Scaly-breasted Lorikeet x 6
- Kingfisher x 5
- Brush-tailed Possum box x 3
- Ring-tailed Possum box x 2
- Little Lorikeet x 3
- Laughing Kookaburra x 3
- Sulphur-crested Cockatoo x 3
- Pacific Black Duck x 2
- Rainbow Lorikeet x 2

Note: Nest box design may be supplemented by another design from list where the site is considered unsuitable for a particular fauna species by the qualified nest box installer.

Further information on nest box specifications is available from ‘Nest boxes for wildlife: A practical guide’ by Alan and Stacey Franks and ‘The nest box book’ by the Gould League. Final design is subject to latest information and construction from local contractors / suppliers.

CONSTRUCTION

Materials used for nest box construction should meet the following criteria:

- 100% recycled HDPE (High density polyethylene), or
- durable timber, such as 30mm thick plantation pine, Cypress, or structural / external pine plywood.
- sustainably sourced and have a Forest Stewardship Certificate (FSC), Chain of Custodianship Certificate or equivalent.
- Internal surfaces should not be painted. Any finishes used be free of Volatile organic compounds (VOCs).
- Second-hand timber should be free of nails and paint.
- Should have a lifespan of at least 10-15 years

Note: Less durable nest box materials such as plywood, are more susceptible to being chewed by non-target species. For example, Galahs have been known to chew smaller entrance holes to gain access to a nest box.

INSTALLATION

Nest boxes should be installed in suitable nest box trees, which are defined as Eucalypts possessing the following attributes:

- a) greater than 200mm in diameter at breast height (1.3m) and
- b) in a healthy condition;
- c) do not possess existing hollows, or
- d) are unlikely to develop hollows in the near future (ie MBRC ‘habitat trees’) (Franks, A 2017, pers.comm. 24 October).

The following guidelines should be followed in relation to installation of nest boxes:

- Boxes to be installed by qualified nest box installers.
- Boxes should be installed prior to the removal of habitat trees on the development site to provide habitat opportunities for displaced hollow-using fauna.
- In urban parklands and residential areas, nest boxes should target fauna species that are adaptable to disturbed environments such as Kookaburras, possums, parrots and Cockatoos rather than less-dominant species such as Tree Creepers, Kingfishers, Micro-bats and Gliders.
- When deciding on the number of nest boxes to install, it is important to factor in available food resources for target fauna. As a rule, Hollow Log Homes (pers.comm. Feb 2018) recommend a maximum of ten (10) boxes per hectare initially. If nest box use is evident during monitoring (indicating that food resources are available), additional boxes may be installed.
- Boxes are to contain small drainage holes at the base with 20-30mm of hardwood sawdust placed in the box (Nesting material is not required as this will be brought in by the fauna).
- Boxes are to be installed at a location in the tree to meet the target species requirements. It should be placed high enough in the tree to reduce the chances of predation by introduced fauna species, and out of reach of humans. Greater than 4 metres (12 feet) above ground level is recommended to minimise predation from cats. Placement of nest boxes away from potential edge effects will further mitigate feral uptake.
- Boxes are to be positioned where they can be easily inspected/maintained.
- Boxes should not be positioned due west, or in a direction where severe storms and / or prevailing winds commonly come from. A north-east to south-east aspect is preferred by many species. Boxes should also be installed in a location that is shaded from the hottest parts of the day.
- If possible, place boxes in locations that are least vulnerable to branch fall
- If possible, place the box level with a tree branch to provide easy access for fauna

- Boxes should be firmly mounted with least impact to the tree and according to Council specifications. For instance, MBRC and Franks (2006) only recommend using the Habisure system to mount boxes (refer to **SHEET 3**). For least impact, choose trees with a limb on the opposite side to where the nest box is intended.
- Boxes should be installed on tree species preferred by the target fauna species. For example, Phascogales prefer rough-barked trees whereas Scaly-breasted Lorikeets prefer smooth-barked or dead trees.
- All nest boxes should be individually numbered and nest box positions recorded by GPS and mapped to assist in future monitoring. Installation details, including height and aspect, and nest box particulars should be catalogued.

MONITORING AND REPORTING

Following nest box installation, a single page memo or email outlining installed nest box types, host tree particulars and location coordinates with supporting map is to be provided to EPP and SHG. This information will be forwarded to MBRC. Monitoring is to be undertaken by a qualified nest box ecologist annually for 3 years and issued to EPP and SHG. Inspections will identify the following:

- fauna use including target and/or non-target species
- rectification procedures for introduced species. NB. Native predators should not be removed from boxes unless they are endangering a threatened fauna species
- any damage or dieback, or risk to the nest box
- maintenance required.

The monitoring template provided on Sheet 4, or a similar checklist, should be completed during each inspection. Following each quarterly inspection, a report is to be prepared within 14 days by the nest box ecologist and issued to EPP. This brief report will detail the results of the inspection and outline any further measures to improve beneficial outcomes of the strategy for fauna (e.g. removal of pest species, minor repairs or replacement).

MAINTENANCE

Damaged boxes are to be repaired or replaced within three weeks of monitoring activities and details of all maintenance work should be submitted to EPP and SHG following works. Installed nest boxes will be maintained for 12 months.

Note: Natural hollows have microorganisms which assist in decomposing leaf and waste matter. Nest boxes do not have naturally occurring microorganisms that makes them prone to rotting at their base. Nest boxes will on average, require replacement every 5-15 yrs.

DEFINITIONS

EPBC: Environment Protection and Biodiversity Conservation Act 1999

Habitat Tree (MBRC Planning Scheme): A native tree with a diameter greater than 0.8m at 1.3m above the ground. It should be noted that trees not meeting this size may still contain multiple conspicuous hollows and provide critical habitat for wildlife.

ICC: Ipswich City Council

NCA: Nature Conservation Act 1992

MBRC: Moreton Bay Regional Council

Vegetation Management Plan

Nest Box Strategy - Plan

NEST BOXES TO BE INSTALLED PRIOR TO CLEARING WORKS.

BOXES TO BE INSTALLED AT LOCATIONS ABOVE GROUND THAT DETER PREDATORS BUT ARE SUITABLE FOR MAINTENANCE AND MONITORING.

WHERE POSSIBLE, INSTALL BOXES IN ALTERNATIVE LOCATIONS FOR WINTER AND SUMMER ROOSTING

BOXES FOR SHY SPECIES TO BE INSTALLED AT INTERNAL AREAS WHEREAS SPECIES ADAPTED TO URBAN ENVIRONMENTS MAY BE INSTALLED CLOSER TO EDGES

SCALY BREASTED LORIKEET BOX

SPECIES IN DECLINE; BOXES INSTALLED ON SMOOTH BARKED TREES; IN NORTH EASTERLY DIRECTION; AWAY FROM PREVAILING WINDS AND WEATHER

KINGFISHER BOX

SHY SPECIES; INSTALL BOXES IN QUIET LOCATION; NORTH EASTERLY DIRECTION; OPEN AREA FOR FLIGHT PATH;

LITTLE / RAINBOW LORIKEET BOX

TO BE INSTALLED IN NORTH EASTERLY DIRECTION; AWAY FROM PREVAILING WINDS AND WEATHER; OPEN AREA FOR FLIGHT PATH

PACIFIC BLACK DUCK

BOXES TO BE INSTALLED ABOVE WATER. INSTALL ALTERNATIVE NEST BOX FROM LIST IF NO SUITABLE LOCATIONS

SULPHUR CRESTED COCKATOO BOX

NORTH EASTERLY DIRECTION AWAY FROM PREVAILING WINDS AND WEATHER; OPEN AREA FOR FLIGHT PATH

LAUGHING KOOKABURRA BOX

NORTH EASTERLY DIRECTION AWAY FROM PREVAILING WINDS AND WEATHER; OPEN AREA FOR FLIGHT PATH

SMALL OWL BOX

BARN OWL AND SOUTHERN BOOBOOK OWL BOXES TO BE INSTALLED ON LGE MATURE TREE; 5-10M ABOVE GROUND; NORTHEASTERLY DIRECTION; AWAY FROM PREVAILING WINDS AND WEATHER OPEN AREA FOR FLIGHT PATH; GOOD CANOPY COVER; AWAY FROM NIGHT LIGHTS

SUGAR GLIDER BOX

TO BE INSTALLED IN NORTH EASTERLY DIRECTION AWAY FROM PREVAILING WINDS; SUGAR GLIDES KNOWN TO INHABITAT OTHER NEST BOX DESIGNS.

BRUSH-TAILED PHASCOGALE BOX

TO BE INSTALLED IN EASTERLY DIRECTION AWAY FROM PREVAILING WINDS; INSTALL IN GROUPS OF THREE TO ENSURE SUGAR GLIDERS DONT USE ALL BOXES IN LOCATION; 4m ABOVE GROUND; LARGER (>300mm DBH), ROUGH BARKED TREES WHERE POSSIBLE; OVERLAPPING CANOPY FOR SPECIES TO JUMP ACROSS

BAT ROOST BOX

TO BE INSTALLED ALONG CREEK BANK > 4m ABOVE GROUND; IN SUNNY POSITION WITH ENTRANCE FACING AWAY FROM PREVAILING WINDS; OPEN AREA FOR FLIGHT PATH; NO OVERHANGING BRANCHES WITHIN 3m (HORIZONTAL DISTANCE) FROM BOX BASE; 1-3 BOXES MAY BE INSTALLED ON SUITABLE TREES.

POSSUM BOXES

BOXES INSTALLED IN NORTH EASTERLY DIRECTION AWAY FROM PREVAILING WINDS. INSTALL IN LOCATIONS WHERE PREVIOUS EVIDENCE OBSERVED.

Legend

- Qld DCDB
- Layout design
- Earthworks contour design
- Proposed Development/ works area
- Vegetation retention area
- Approved trunk/haul road clearing extent
- Hollow-bearing trees (contain up to 9 natural hollows) to be removed
- Hollow-bearing trees to be retained
- Nest box locations (indicative)

NOTES:

Engineers and/or clearing contractors to prepare sediment and erosion control measures to ensure no movement off materials off site and minimal movement on site.

Refer to tree schedule for detailed list of trees including number, Botanical name, DBH, spread, height and habitat values.

Tree extents shown on this plan series are the Tree Protection Zone (TPZ) as specified in AS4970-2009.

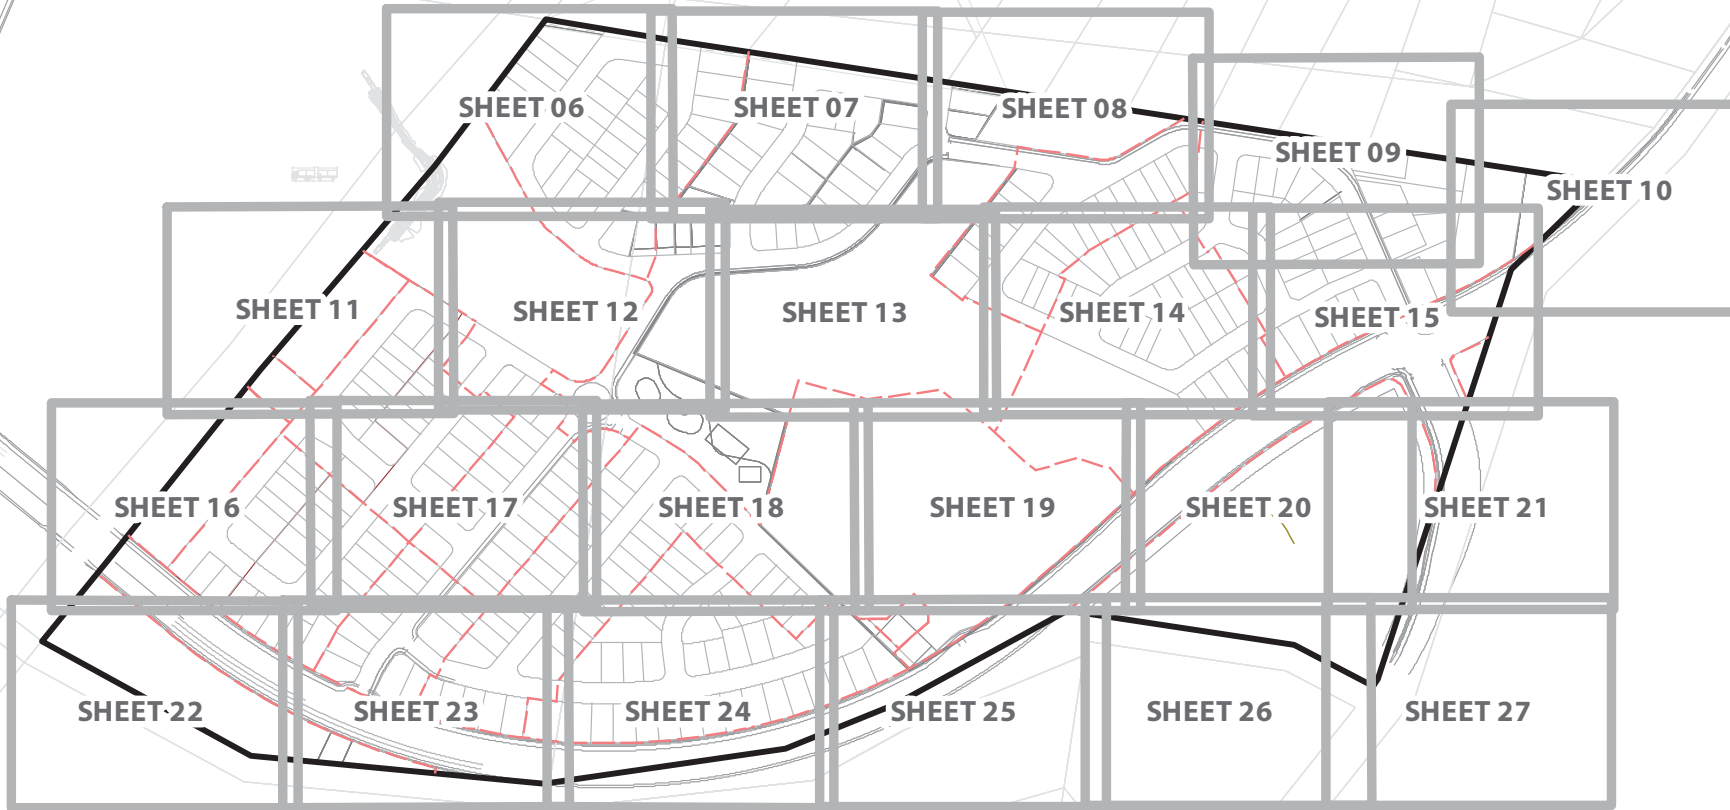

Where minor encroachment of a TPZ occurs as part of a temporary construction zone (e.g. access to drainage structures) trees on the waterway or bushland side of the works are proposed on this VMP plan for retention. While it may be possible that minor works result in the die-back or even loss of the tree its bushland context does not result in increased risk to open space users.

NOTES:

Engineers and/or clearing contractors to prepare sediment and erosion control measures to ensure no movement of materials off site and minimal movement on site.

Refer to tree schedule for detailed list of trees including number, Botanical name, DBH, spread, height and habitat values.

Tree extents shown on this plan series are the Tree Protection Zone (TPZ) as specified in AS4970-2009.

Where minor encroachment of a TPZ occurs as part of a temporary construction zone (e.g. access to drainage structures) trees on the waterway or bushland side of the works are proposed on this VMP plan for retention. While it may be possible that minor works result in the die-back or even loss of the tree its bushland context does not result in increased risk to open space users.

retain

Tree protection fencing

Proposed Development/ works area

Vegetation retention area

Approved trunk/haul road clearing extent

NOTES:

Engineers and/or clearing contractors to prepare sediment and erosion control measures to ensure no movement of materials off site and minimal movement on site.

Refer to tree schedule for detailed list of trees including number, Botanical name, DBH, spread, height and habitat values.

Tree extents shown on this plan series are the Tree Protection Zone (TPZ) as specified in AS4970-2009.

Where minor encroachment of a TPZ occurs as part of a temporary construction zone (e.g. access to drainage structures) trees on the waterway or bushland side of the works are proposed on this VMP plan for retention. While it may be possible that minor works result in the die-back or even loss of the tree its bushland context does not result in increased risk to open space users.
