Vegetation Management Plan - *Notes*

INTRODUCTION

The Environmental Management Division of the **Saunders Havill Group (SHG)** was engaged by **MIRVAC Ltd** to prepare a *Vegetation Management Plan* (VMP) for Precinct 2 of the Greater Flagstone Project on Greenbank Road, Greenbank. The Project is situated in **Economic Development Queensland (EDQ)**'s *Greater Flagstone Priority Development Area* within Logan City Council.

The Project retains a number of existing approvals including an MCU approval DEV2016/768 (**EDQ**). This VMP is compiled as a self-certified plan for EDQ issue only for clearing outside of significant biodiversity areas as per the endorsed Natural Environment Site Strategy. The *VMP* will provide management details for the removal of vegetation within Precinct 2 for the creation of new lots and bushfire management purposes. The clearing works will follow general principles for vegetation clearing documented on this sheet, and all **EDQ** specific requirements.
This plan has been produced by overlaying the following site datasets to determine impacts and disturbance on existing vegetation:

1. GPS/survey accurate tree data including specimen details & features (SHG)
2. Site Inspection of Existing Vegetation (SHG)
3. Site Layout Plans (Premise)
4. Bushfire management area (Rob Friend & Associates Pty Ltd)

PROJECT MANAGEMENT

Vegetation management and its processes is an integral part of the construction and operational phase. The site supervisor is responsible for all onsite works including overseeing vegetation clearing, health and safety of fauna and adhering to both council's conditions and guidelines and Australian Standards - Protection of Trees on Development Sites AS4970-2009.

The site arborist's responsibilities include: prior to the commencement of any earthworks on the site, undertake all appropriate arboricultural measures to ensure the survival and long term health of the existing trees to be retained. These measures may include soil decompaction, soil aeration, fertilising, mulching, watering, root or crown reduction and hazard reduction or as otherwise determined by the arborist. Supervise all works within TPZs and perform any required arboricultural care required to retain trees identified for retention and provide advice and direction on undertaking works within TPZs.

Site and consulting contacts for queries relating to vegetation clearing include:

CLIENT CONTACT: MIVRAC Ltd
Jason Augustine Ph (07) 3859 5355

ENVIRONMENTAL CONTACT: SAUNDERS HAVILL GROUP
Dr. Andrew Davies Ph (07) 3251 9425

SITE CONTRACTOR: TBA

SITE FAUNA SPOTTER-CATCHER: TBA

SITE ARBORIST: TBA

SITE BUSHFIRE CONSULTANT: TBA

CLEARING PHASES AND PROCESS

PHASE 1 - Tree Protection Fencing to be installed
Fencing to be installed prior to the commencement of any clearing works on the site. Tree protection fencing to be located at or beyond 12 x diameter at breast height (DBH) (AS4970-2009 Protection of trees on development sites)—unless approved by the appointed arborist.

PHASE 2 – Environmental Pre-start
Fencing shall be in place at the time of the official pre-start for inspection and sign off by **SHG** environmental coordinators.

PHASE 3 - Fauna Inspections and Management
Undertake necessary fauna management requirements prior to clearing works.

PHASE 4 - Undertake Bulk Clearing

Undertake wholesale removal of vegetation once approved for removal by a qualified fauna spotter. Clearing will occur in the direction outlined in *sheet 46* of this VMP, and managed by the appointed fauna spotter to allow all fauna unimpeded movement south-east towards vegetated areas.

i. By utilising the most appropriate machinery and equipment during vegetation clearing, the probability of injury or death of wildlife during clearing can be significantly reduced or eliminated while still maintaining an efficient vegetation removal process.
ii. Suggested techniques are as follows: (a) a vertical tree grab attachment on an excavator (30 tonne) can be used to pull entire trees in size up to 30-40cm diameter at a height measured at 1.3 metres above ground level and lay them down in a steady controlled fashion, allowing inspection by a wildlife spotter-catcher; (b) where large trees are too large for a vertical tree grab and have been identified, an elevated work platform or cherry picker should be used in conjunction with a chainsaw operator and wildlife spotter/catcher; (c) the use of bulldozers to clear vegetation is limited to low or regrowth vegetation that has been thoroughly inspected by a wildlife spotter/catcher and is found to contain no fauna or potential habitat. Bulldozers are not to be used to push over large trees that contain hollows or other habitat features.

NOTE: Dogs are not permitted onsite at all times during construction. Construction works including clearing must occur between the hours of 6.30am and 6.30pm.

ACCESS AND STOCKPILING

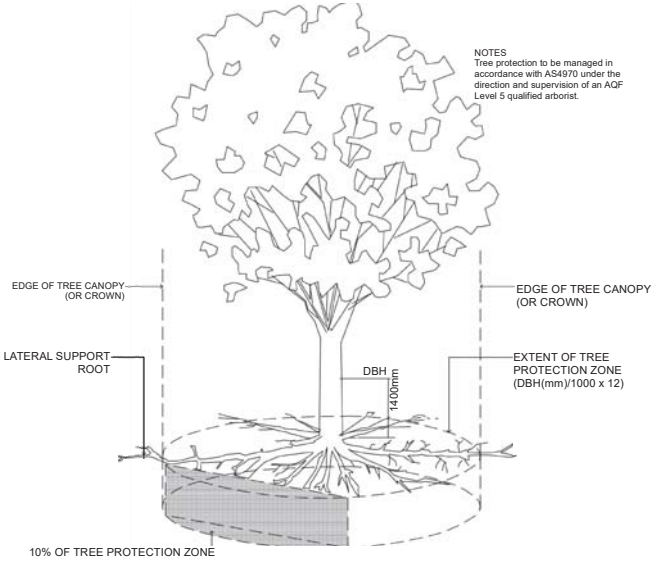

A stockpiling location is to be designated in an easily accessible area outside of TPZs.
An indicative stockpiling location has been allocated at an access point to Greenbank Road, allowing for material to be easily delivered and stored. This location is subject to minor change according to cut/fill activities.

Cleared vegetation free of weeds is to be reused on or off the project site. Recycling techniques include mulching, tub-grinding, wood chipping and salvage (e.g. custom milling). Trees with identified hollows should have the hollow section preserved and should be suitably mounted on nearby or adjacent suitable trees.

MAINTENANCE

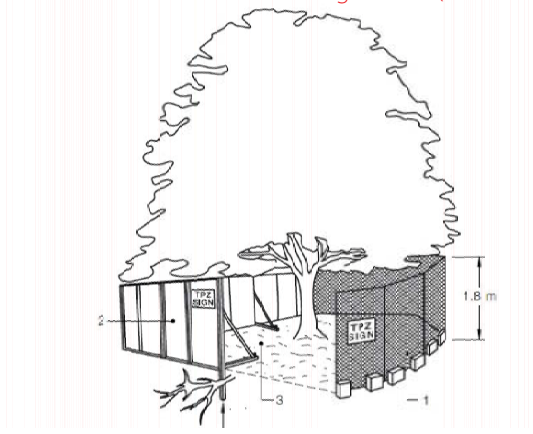

After tree clearing works on site, an analysis of the vegetation's health and growth should be undertaken by the project arborist to determine specific maintenance needs. Follow up maintenance works should be carried out on retained vegetation where required.

Tree Protection Zone - Detail (not to scale)

AMENDED IN RED
By: Brandon Bouda
Date: 21 November 2019
Queensland Government

AS 4970 Tree Protection Fencing - Detail (not to scale)

LEGEND
1. Chain wire mesh panels with shade cloth (if required) attached, held in place with concrete feet.
2. Alternative plywood or wooden paling fence. This fencing option also prevents building materials or soil entering the TPZ.
3. Mulch installation across surface of TPZ (at the discretion of the Project Arborist). No Excavation, construction activity, grade changes, surface treatment or storage of materials of any kind is permitted with the TPZ.
4. Bracing is permissible within the TPZ. Installation of supports should avoid damaging roots.
