# Vegetation Clearing and Fauna Management Plan - Fauna Management Notes

## INTRODUCTION

The Fauna Management specification on this *VCFMP* is designed to protect native animals and control/manage impacts during the vegetation clearing works. The clearing area within designated remediation areas located at central and southern portions of the site. Thirty-eight fauna species were recorded during diurnal and nocturnal fauna surveys, comprising amphibian, bird, reptile and mammal species. The Vulnerable *Pteropus poliocephalus* (Grey-headed Flying-fox) were observed foraging onsite however no evidence of Koala or Powerful Owl was observed despite habitat mapping over the site / historic records in the vicinity of the site (refer to Ecological Assessment Report prepared by SHG 2020). The fauna management specifications and principles incorporated in this *VCFMP* applies generically to all native animals and focuses on avoiding conflicts and incorporating measures to minimize disturbance. Compliance with this section of the *VCFMP* is compulsory and incorporates the use of expert consultants including a Fauna Spotter (holding a valid Wildlife Rehabilitation Permit issued by the **Department of Environment and Science**).

## FAUNA IMPACTS

Clearing of vegetation provides an obvious source of impact to existing habitat and animal safety. More specifically the existing vegetation provides habitat, movement and protection opportunities for some fauna through both regrowth and canopy trees. These opportunities are to be altered during and post vegetation clearing works.

## CONSTRUCTION IMPACTS

- Direct removal of site vegetation
- Loss of habitat
- Noise, vibration and dust
- Erosion and sedimentation
- Threats associated with open cuts etc. and fauna entrapment
- Loss of food sources
- Excavation/compaction/changes in ground levels
- Altering hydrological flows
- Fragmentation of habitat

## OPERATIONAL IMPACTS

- Weed introduction (garden escapees)
- Increased hydrology with increased hardstand
- Altering of run-off chemical and nutrient components (quality)
- Barriers to fauna movement
- Vehicles and pedestrian movement and trespass
- Introduction of domestic and predatory species

## Fauna Management Schedule

| 1.0 PRE CLEARING        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                 |                                                                                                           |                                                        |

| 1.1                     | <b>TEMPORARY FENCING</b><br>Prior to the commencement of works and to be inspected by the site Environmental Coordinator—Delineate areas where vegetation is proposed to be retained with exclusion fencing to prevent accidental felling. Clearing is to be undertaken in accordance with AS 4970-2009 Protection of Trees on Development Sites. <ul style="list-style-type: none"><li>▪ Fencing shall be fauna friendly</li><li>▪ No clearing, stockpiling, site access, earthworks, storage, etc. is to occur within the temporary protection fencing.</li><li>▪ Only approved weed management works to occur within the temporary protection fencing</li><li>▪ Fencing to be reinstated immediately if damaged or knocked down, any damage to retained trees to be immediately reported to Project Arborist.</li><li>▪ Fencing to remain until the completion of all site works.</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                             | SITE SUPERVISOR                 | Prior to the commencement of clearing                                                                     | Inspected by EDQ or the Environmental Site Coordinator |
| 1.2                     | <b>CONTRACTOR EDUCATION &amp; AWARENESS</b><br>All site contractors and subcontractors will be made aware of their responsibilities to protect native fauna. The Fauna Management notes on this VCFMP is provided as a working document to assist on-site management and protection of native animals. This generally will form part of education and training on a broader work place health and safety but as a minimum will include: <ul style="list-style-type: none"><li>▪ Copy of VCFMP kept on-site (Site Office).</li><li>▪ General education and awareness notification of contractors and sub-contractors involved in activities potentially impacting native animals as part of site induction – contractors must know the location of the VCFMP, key phone numbers and who to report to if they breach the VCFMP.</li></ul> A list of relevant contact phone numbers as listed on these drawings is kept in a visible and accessible location in the site office.                                                                                                                                                                                                                                                                                                                                                                              | SITE SUPERVISOR / THE PROPONENT | Prior to the commencement of clearing and as part of the site induction for new staff and sub-contractors | SITE SUPERVISOR                                        |
| 2.0 VEGETATION CLEARING |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                 |                                                                                                           |                                                        |
| 2.1                     | <b>SPOTTER / RELOCATOR</b><br>Immediately prior to the commencement of clearing of native vegetation a daily visual inspection of the area must be carried out by the fauna spotter-catcher. Furthermore, the fauna spotter-catcher is to be present on site during all clearing operations to supervise and direct clearing works, and to respond to any situations that may arise in relation to fauna. In the event of an animal being located, a suitable buffer area (as determined by the fauna spotter-catcher) should be established around the animal's location that excludes machinery until it has relocated at its own accord (usually overnight). If an animal requires relocating this must be undertaken by a suitable qualified fauna expert recognized by the <b>Department of Environment &amp; Science</b> . For some fauna, specific permit requirements may apply. If vegetation is left stockpiled overnight, the fauna spotter-catcher must inspect the vegetation prior to chipping or removal from site. Any native fauna orphaned or injured by the development process must be reported to the <b>Department of Environment &amp; Science</b> (1300 130 372) or <b>RSPCA</b> (1300 264 625). The Site Supervisor is responsible for the safe management of site fauna and implementation of these specific fauna requirements. | SITE SUPERVISOR                 | Prior to the commencement, and during clearing                                                            | Inspected by EDQ or the Environmental Site Coordinator |
| 2.2                     | <b>SPECIFIC KOALA MANAGEMENT NOTES</b><br>A Koala Spotter is a person who holds a tertiary qualification in Biology or Zoology, or who is demonstrably experienced in the identification and location of Koalas in their natural habitat. For example, a koala keeper employed by a licensed Wildlife exhibitor (i.e. a zoo) may be capable of demonstrating competence in locating Koala's. Prior to the commencement and during felling operations, it is the responsibility of the Koala spotter to be present at the site of felling operations identify any tree at the site within which a Koala is present, as well as any tree that has a crown which is intermeshed or overlapping with such a tree; and advise the person who is authorised to conduct the felling operation, or that persons' representative, of the precise location of each such tree Management Item.                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | SITE SUPERVISOR                 | Prior to the commencement, and during clearing                                                            | Inspected by EDQ or the Environmental Site Coordinator |
| 2.3                     | <b>CLEARING PATTERN / FAUNA FLUSHING</b><br>Clearing occurs once the fauna spotter-catcher gives sign off the site is clear of significant native species. The intended clearing directions is towards the proposed Conservation Open Space Area at northwest portion of site. Clearing direction is subject to amendment by the fauna spotter-catcher. At the completion of operational works, and prior to the sealing of survey plans for the relevant stage, the fauna spotter-catcher must provide certification to EDQ officers that all works were undertaken in accordance with these fauna management requirements and specific EDQ requirements.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | SITE SUPERVISOR                 | Prior to the commencement, and during clearing                                                            | Inspected by EDQ or the Environmental Site Coordinator |

**Legend**

- Native tree to retain during remediation works
- Weed tree to retain during remediation works
- Significant tree to be retained during remediation works
- Native tree status subject to remediation works extent / requirements
- Native tree to remove as part of remediation works
- Weed tree to remove as part of remediation works
- Native tree - not part of this application
- Weed tree - not part of this application
- Site boundary
- Proposed remediation area
- Potential remediation buffer (removal subject to extent of site contamination & guidance and recommendations of Environmental Engineer, Arborist & Environmental Superintendant)
- Tree protection fencing
- Vegetation stockpile location (indicative)

# Vegetation Clearing & Fauna Management Plan - Clearing Direction
