# Vegetation Management Plan - *Notes*

## INTRODUCTION

The Environmental Management Division of the **Saunders Havill Group (SHG)** was engaged by **Pioneer Fortune Pty Ltd** to prepare a Vegetation Management Plan (VMP) for Tranche 1B and 1C interface zones between development areas and open-space areas.

This VMP is a requirement of the EDQ endorsed Natural Environment Site Strategy for the Undullah project. The purpose of this VMP is to manage the vegetation removal process and the protection of fauna species within the clearing area. The plan is required to be approved prior to clearing works commencing. The clearing works will follow general principles for vegetation clearing documented on this sheet and the *Fauna Management Plan* document, and all EDQ specific requirements.

This VMP has been produced by overlaying the following site datasets to determine impacts and disturbance on existing vegetation in the interface zone between development and Open-space areas:

1. GPS accurate tree data including specimen details & features and site inspection of existing vegetation (SHG, 2020)
2. Site Layout Plans (URBIS, 2020)

## PROJECT MANAGEMENT

Vegetation management and its processes are an integral part of the construction and operational works phases. The site supervisor is responsible for all onsite works including overseeing vegetation clearing, health and safety of fauna and adhering to both EDQ's conditions and guidelines and Australian Standards - Protection of Trees on Development Sites AS4970-2009 and Pruning of Amenity Trees AS4373-1996.

The site arborist's responsibilities include: prior to the commencement of any earthworks on the site, undertake all appropriate arboricultural measures to ensure the survival and long-term health of existing trees to be retained. These measures may include soil decompaction, soil aeration, fertilising, mulching, watering, root or crown reduction and hazard reduction or as otherwise determined by the arborist. The site arborist is also required to direct and supervise all works within TPZs of trees to be retained, and perform arboricultural care requirements where necessary.

## SITE CONTACTS

Site and consulting contacts for queries relating to vegetation clearing include:

Client Contact:
Pioneer Fortune Pty Ltd
*To be advised*

Site Contractor:
*To be advised*

Site Fauna spotter-catcher:
*To be advised*
(Refer to *Fauna Management Plan* document for responsibilities)

Environmental Contact:
Saunders Havill Group
Dr Andrew Ridley
Ph (07) 3251 9466

Site Arborist:
*To be advised*

Site Bushfire Consultant:
*To be advised*

## CLEARING PHASES AND PROCESS

PHASE 1 - Tree Protection Fencing to be installed
Fencing to be installed prior to the commencement of any clearing works on the site. Tree protection fencing to be located at or beyond 12 x diameter at breast height (DBH) (AS4970-2009 Protection of trees on development sites)—unless approved by the appointed arborist.

PHASE 2 - Pre-start Meeting
Fencing shall be in place prior to the official pre-start meeting for inspection and sign off by the Environmental Coordinator.

PHASE 3 - Fauna Inspections and Management
Undertake necessary fauna management requirements prior to clearing works - as a minimum, this should include the specifications listed in the *Fauna Management Plan* document, and acknowledge specific EDQ approval requirements.

PHASE 4 - Undertake Bulk Clearing
Undertake wholesale removal of vegetation once approved for removal by a qualified fauna spotter. Clearing will occur in the direction outlined in *sheet 11* of this VMP, and managed by the appointed fauna spotter to allow all fauna unimpeded movement north and west towards adjoining remaining bushland. Sequential clearing will occur on the site adhering to the limitations of clearing no more than 3 ha per day set out in Section 2, Part 3 of the Nature Conservation (Koala) Conservation Plan 2017.

Vegetation clearing techniques:

i. By utilising the most appropriate machinery and equipment during vegetation clearing, the probability of injury or death of wildlife during clearing can be significantly reduced or eliminated while still maintaining an efficient vegetation removal process.

ii. Bulldozers will be used to clear vegetation that has been thoroughly inspected by a fauna spotter-catcher and is found to contain no fauna or potential habitat. Bulldozers are not to be used to push over large trees that contain hollows or other habitat features. When a tree is suspected of containing fauna or potential habitat, other methods of clearing should be used such as (a) a vertical tree grab attachment on an excavator (30 tonne) can be used to pull entire trees in size up to 30-40cm diameter at a height measured at 1.3 metres above ground level and lay them down in a steady controlled fashion, allowing inspection by a fauna spotter-catcher (b) where large trees are too large for a vertical tree grab and have been identified, an elevated work platform or where practical, cherry picker should be used in conjunction with a chainsaw operator and fauna spotter-catcher. Alternatively, careful removal of hollow section from habitat tree and gentle lowering for inspection by fauna spotter-catcher.

NOTE: Dogs are not permitted onsite at all times during construction. Construction works including clearing must occur between the hours of 6.30am and 6.30pm.

## ACCESS AND STOCKPILING

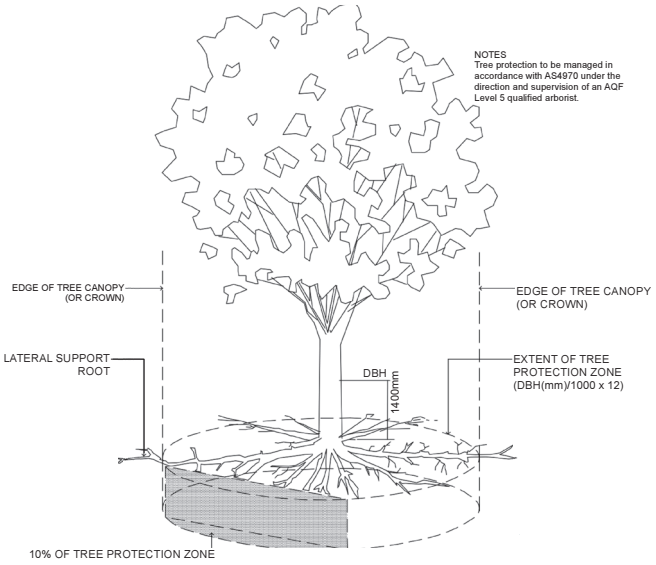
A tree and mulch stockpiling location is to be designated in an easily accessible area outside of TPZs. Indicative stockpiling locations have been allocated near existing access tracks, allowing for material to be easily delivered and stored. These locations are subject to minor change according to cut/fill activities.

Cleared vegetation free of weeds is to be reused on or off the project site. Recycling techniques include mulching, tub-grinding, wood chipping and salvage (e.g. custom milling). Trees with identified hollows should have the hollow section preserved and should be suitably mounted on nearby or adjacent suitable trees.

## MAINTENANCE

After tree clearing works on site, an analysis of the vegetation's health and growth should be undertaken by the project arborist to determine specific maintenance needs. Follow up maintenance works should be carried out on retained vegetation where required.

## Tree Protection Zone - Detail (not to scale)



## Tree Protection Fencing - Detail (not to scale)
