## precinct vision

The landscape intent recognises the need to blur the sites edges & connect, both visually & physically with the surrounding streetscape and future parkland. Pulling the landscape from outside to inside, the connection is further reinforced internally through an integrated landscape that unveils a series of courtyard garden spaces.

The concept aims to:

- Bind the site within its context through the continuation of the existing landscape character
- Create a series of seamlessly integrated gardens that are shaped by the different uses within the precinct
- Create connections and links with the adjacent park and the external residential community
- Manage the scale of the existing built form and extent of infrastructure by creating areas of respite and sanctuary

## precinct design drivers

### connection

Visual & physical connectivity of the public realm is a critical element in the design. The central spine connects the lobby north to south, integrates the central landscape terrace with the parkland and the street and is the hub of all external activity. Through pavement, seating, lighting, awning and walls, it unifies the site, defines public space, recreational use and pedestrian movement.

### the interface

The SNP development will blend into its surroundings through the integration of the structure into the existing landscape. The interface is crucial for informing arrival and way finding, with clearly identified access points allowing access from both the park and streetscape. The green trellis interface along the podium boundary of the site acts to bring the existing landscape up, onto & into the internal landscape.

### the core

A series of internal courtyard spaces are revealed throughout the site, displaying a unique character that is specific to its space and context. The gardens are a sanctuary, characterised by lush vegetation and vertical screening structures to provide respite to internal private spaces. The courtyards are of human scale for ultimate comfort and amenity.

Legend

- 1 feature paving
- 2 climber trellis to basement edge
- 3 entry stairs to Hurworth at
- 4 grand stairs to parkland
- 5 Landscape entry courtyard
- 6 recessed planter to basement edge
- 7 feature seating
- 8 ramp access to lobby
- 9 structure over courtyard entry
- 10 access to bicycle parking
- 11 1500mm concrete loop path
- 12 turf streetscape with planting areas & trees
- 13 turf bank to provide access from park - max grade 1:16. Barrier to edge to be provided if required
- 14 carpark
- 15 existing sewer easement
- 16 fence to separate public/private zones
- 17 raised turf areas
- 18 freestanding planters with shade trees
- 19 permanent podium planting
- 20 entry signage wall

GROUND FLOOR - Stage 1  
temporary landscape treatment to Stage 2 zone

legend

- 1 feature paving
- 2 landscape entry courtyard
- 3 climber trellis to basement edge
- 4 entry stairs to Hurworth st
- 5 entry stairs to parkland
- 6 ramp access to lobby
- 7 access to bicycle parking
- 8 1500mm concrete footpath
- 9 landscape entry courtyard
- 10 recessed planter to basement edge
- 11 feature seating
- 12 internal allium planter
- 13 turf streetscape with planting areas & trees
- 14 existing sewer easement
- 15 turf back to provide access from park - mix grade 1:16. Barrier to edge to be provided if required
- 16 carpark
