Vegetation Clearing and Fauna Management Plan - Notes

INTRODUCTION

The Environmental Management Division of the **Saunders Havill Group (SHG)** was engaged by **Economic Development Queensland (EDQ)** to prepare a Vegetation Clearing and Fauna Management Plan (VCFMP) for proposed clearing for proposed Stage 2 development at 53 Seventeen Mile Rocks Road, Oxley (600/SP236626 & 551/SP142916).

The purpose of this plan is to manage the vegetation removal process and the protection of fauna species within proposed remediation areas. The clearing works will follow general principles for vegetation clearing documented on this sheet and *Sheet 3*.

This VCFMP has been produced by overlaying the following site datasets to determine impacts and disturbance on existing vegetation:

1. GPS accurate tree data including specimen details & features (SHG 2018-2020)
2. Survey accurate tree data (Land Partners 2018)
3. Site Remediation Layout Plans (Butler Partners 2020)
4. Staging layout Plan (Place Design Group 2021)
5. Engineering drawings (KN Group 2021)

PROJECT MANAGEMENT

Vegetation management and its processes are an integral part of the construction and operational works phases. The site supervisor is responsible for all onsite works including overseeing vegetation clearing, health and safety of fauna and adhering to relevant conditions and guidelines and Australian Standards - Protection of Trees on Development Sites AS4970-2009 and Pruning of Amenity Trees AS4373-1996.

The project arborist (with minimum AQF Level 5 in Arboriculture and minimum 5 years' experience) is responsible for: undertaking all appropriate arboricultural measures prior to the commencement of any earthworks on site to ensure the survival and long-term health of existing trees to be retained. These measures may include soil decompaction, soil aeration, fertilising, mulching, watering, root or crown reduction and hazard reduction or as otherwise determined by the arborist. The site arborist is also required to direct and supervise all works within TPZs of trees to be retained, and perform arboricultural care requirements where necessary.

SITE CONTACTS

Site and consulting contacts for queries relating to vegetation clearing include:

Client Contact:	Environmental Contact:
Economic Development Queensland	Saunders Havill Group
Mr Kaush Singh	Mr James Gautrey
Ph (07) 3452 7076	Ph (07) 3251 9458

Site Contractor:	Site Arborist:
<i>To be advised</i>	<i>To be advised</i>

Site Fauna spotter-catcher:	Site Bushfire Consultant:
<i>To be advised</i>	Land and Environment Consultants
(Refer to <i>Sheet 3</i> for responsibilities)	Mr Rob Janssen
	Ph 0466 714 833

CLEARING PHASES AND PROCESS

PHASE 1 - Tree Protection Fencing to be installed

Fencing to be installed prior to the commencement of any clearing works on the site. Tree protection fencing to be located at or beyond 12 x diameter at breast height (DBH) (AS4970-2009 Protection of trees on development sites)—unless approved by the appointed arborist.

PHASE 2 - Pre-start Meeting

Fencing shall be in place at the time of the official pre-start meeting for inspection and sign off by EDQ Officers.

PHASE 3 - Fauna Inspections and Management

Undertake necessary fauna management requirements prior to clearing works - as a minimum, this should include the specifications listed on sheet 3, and acknowledge specific EDQ approval requirements.

PHASE 4 - Undertake Bulk Clearing

Undertake wholesale removal of vegetation once approved for removal by a qualified fauna spotter.

Clearing direction is to be managed by the appointed fauna spotter-catcher .

Vegetation clearing techniques:

- i. By utilising the most appropriate machinery and equipment during vegetation clearing, the probability of injury or death of wildlife during clearing can be significantly reduced or eliminated while still maintaining an efficient vegetation removal process.
- ii. Suggested techniques are as follows: (a) a vertical tree grab attachment on an excavator (30 tonne) can be used to pull entire trees in size up to 30-40cm diameter at a height measured at 1.3 metres above ground level and lay them down in a steady controlled fashion, allowing inspection by a fauna spotter-catcher (b) where large trees are too large for a vertical tree grab and have been identified, an elevated work platform or where practical, cherry picker should be used in conjunction with a chainsaw operator and fauna spotter-catcher. Alternatively, careful removal of hollow section from habitat tree and gentle lowering for inspection by fauna spotter-catcher (c) the use of bulldozers to clear vegetation is limited to vegetation that has been thoroughly inspected by a fauna spotter-catcher and is found to contain no fauna or potential habitat. Bulldozers are not to be used to push over large trees that contain hollows or other habitat features.

NOTE: Dogs are not permitted onsite at all times during construction. Construction works including clearing must occur between the hours of 6.30am and 6.30pm.

ACCESS AND STOCKPILING

A vegetation stockpiling location is to be designated in an easily accessible area outside of TPZs. Indicative vegetation stockpiling locations have been allocated at previously cleared locations near remediation areas, allowing for material to be easily delivered and stored. This location is subject to minor change according to cut/fill activities and intended location for reuse.

Cleared vegetation free of weeds is to be reused on or off the project site. Recycling techniques include mulching, tub-grinding, wood chipping and salvage (e.g. custom milling). Trees with identified hollows should have the hollow section preserved and should be suitably mounted on nearby or adjacent suitable trees.

MAINTENANCE

After tree clearing works on site, an analysis of the vegetation's health and growth should be undertaken by the project arborist to determine specific maintenance needs. Follow up maintenance works should be carried out on retained vegetation where required. If conditioned in the DA approval—the project arborist may be required to submit a report to EDQ detailing the measures undertaken during the construction period and any further work required post this period.

BUSHFIRE PROTECTION ZONE

Tree retention within the Bushfire Protection Zone is to be certified by the engaged Project Arborist (minimum AQF Level 5) and Bushfire Consultant prior to plan sealing. The certification by the Project Arborist is to include an individual tree assessment to identify specimens which may:

1. Contain limbs less than 2m above ground; or
2. Overhang or interfere with the building area; or
3. Contain dead/rotting limbs or be considered dangerous.

If trees are identified to meet any of the above criteria or contravene Section 6.1 of the Bushfire Management Plan, the retention or removal of these individual specimens is to be certified by the Project Arborist in consultation with the Bushfire Consultant. Evidence of the Project Arborist and Bushfire Consultant certification and final tree retention and removal status of all tree specimens within the Bushfire Protection Zone is to be provided to EDQ prior to plan sealing.

DYSCHORISTE DEPRESSA WEED CONTROL

24hrs prior to vegetation clearing commencing, *Dyschoriste depressa* is to be identified on-site by a suitably qualified professional and is to be treated via foliar spray. After vegetation clearing has been completed and prior to construction works commencing, an additional survey identifying *Dyschoriste depressa* is to be undertaken. If any additional locations of *Dyschoriste depressa* are identified, they are to be treated accordingly. Prior to plan sealing, certification of *Dyschoriste depressa* eradication within the development footprint is to be provided to EDQ.

Tree Protection Zone - Detail (not to scale)

AS 4970 Tree Protection Fencing - Detail (not to scale)

LEGEND

1. Chain wire mesh panels with shade cloth (if required) attached, held in place with concrete feet.
2. Alternative plywood or wooden paling fence. This fencing option also prevents building materials or soil entering the TPZ.
3. Mulch installation across surface of TPZ (at the discretion of the Project Arborist). No Excavation, construction activity, grade changes, surface treatment or storage of materials of any kind is permitted within the TPZ.
4. Bracing is permissible within the TPZ. Installation of supports should avoid damaging roots.

DRAWING No.: 9216 E 02 VCFMP Stage 2 A

Vegetation Clearing and Fauna Management Plan - *Fauna Management Notes*

INTRODUCTION

The Fauna Management specification on this VCFMP is designed to protect native animals and control/manage impacts during the vegetation clearing works. The clearing area is located within Stages 2A and 2B of the development footprint, in the eastern portion of the project site. Thirty-eight fauna species were recorded during diurnal and nocturnal fauna surveys, comprising amphibian, bird, reptile and mammal species. The vulnerable *Pteropus poliocephalus* (Grey-headed Flying-fox) were observed foraging onsite however no evidence of Koala or Powerful Owl was observed despite habitat mapping over the site / historic records in the vicinity of the site (refer to Ecological Assessment Report prepared by SHG 2020). The fauna management specifications and principles incorporated in this VCFMP applies generically to all native animals and focuses on avoiding conflicts and incorporating measures to minimize disturbance. Compliance with this section of the VCFMP is compulsory and incorporates the use of expert consultants including a Fauna Spotter (holding a valid Wildlife Rehabilitation Permit issued by the **Department of Environment and Science**).

FAUNA IMPACTS

Clearing of vegetation provides an obvious source of impact to existing habitat and animal safety. More specifically the existing vegetation provides habitat, movement and protection opportunities for some fauna through both regrowth and canopy trees. These opportunities are to be altered during and post vegetation clearing works.

CONSTRUCTION IMPACTS

- Direct removal of site vegetation
- Loss of habitat
- Noise, vibration and dust
- Erosion and sedimentation
- Threats associated with open cuts etc. and fauna entrapment
- Loss of food sources
- Excavation/compaction/changes in ground levels
- Altering hydrological flows
- Fragmentation of habitat

OPERATIONAL IMPACTS

- Weed introduction (garden escapees)
- Increased hydrology with increased hardstand
- Altering of run-off chemical and nutrient components (quality)
- Barriers to fauna movement
- Vehicles and pedestrian movement and trespass
- Introduction of domestic and predatory species

Fauna Management Schedule

1.0 PRE CLEARING				
Ref.	Management Item	Responsibility	Timing	Reporting
1.1	TEMPORARY FENCING Prior to the commencement of works and to be inspected by the site Environmental Coordinator—Delineate areas where vegetation is proposed to be retained with exclusion fencing to prevent accidental felling. Clearing is to be undertaken in accordance with AS 4970-2009 Protection of Trees on Development Sites. - Fencing shall be fauna friendly - No clearing, stockpiling, site access, earthworks, storage, etc. is to occur within the temporary protection fencing. - Only approved weed management works to occur within the temporary protection fencing - Fencing to be reinstated immediately if damaged or knocked down, any damage to retained trees to be immediately reported to Project Arborist. - Fencing to remain until the completion of all site works.	SITE SUPERVISOR	Prior to the commencement of clearing	Inspected by EDQ or the Environmental Site Coordinator
1.2	CONTRACTOR EDUCATION & AWARENESS All site contractors and subcontractors will be made aware of their responsibilities to protect native fauna. The Fauna Management notes on this VCFMP is provided as a working document to assist on-site management and protection of native animals. This generally will form part of education and training on a broader work place health and safety but as a minimum will include: - Copy of VCFMP kept on-site (Site Office). - General education and awareness notification of contractors and sub-contractors involved in activities potentially impacting native animals as part of site induction – contractors must know the location of the VCFMP, key phone numbers and who to report to if they breach the VCFMP. A list of relevant contact phone numbers as listed on these drawings is kept in a visible and accessible location in the site office.	SITE SUPERVISOR / THE PROPONENT	Prior to the commencement of clearing and as part of the site induction for new staff and sub-contractors	SITE SUPERVISOR
2.0 VEGETATION CLEARING				
2.1	SPOTTER / RELOCATOR Immediately prior to the commencement of clearing of native vegetation a daily visual inspection of the area must be carried out by the fauna spotter-catcher. Furthermore, the fauna spotter-catcher is to be present on site during all clearing operations to supervise and direct clearing works, and to respond to any situations that may arise in relation to fauna. In the event of an animal being located, a suitable buffer area (as determined by the fauna spotter-catcher) should be established around the animal's location that excludes machinery until it has relocated at its own accord (usually overnight). If an animal requires relocating this must be undertaken by a suitable qualified fauna expert recognized by the Department of Environment & Science . For some fauna, specific permit requirements may apply. If vegetation is left stockpiled overnight, the fauna spotter-catcher must inspect the vegetation prior to chipping or removal from site. Any native fauna orphaned or injured by the development process must be reported to the Department of Environment & Science (1300 130 372) or RSPCA (1300 264 625). The Site Supervisor is responsible for the safe management of site fauna and implementation of these specific fauna requirements.	SITE SUPERVISOR	Prior to the commencement, and during clearing	Inspected by EDQ or the Environmental Site Coordinator
2.2	SPECIFIC KOALA MANAGEMENT NOTES A Koala Spotter is a person who holds a tertiary qualification in Biology or Zoology, or who is demonstrably experienced in the identification and location of Koalas in their natural habitat. For example, a koala keeper employed by a licensed Wildlife exhibitor (i.e. a zoo) may be capable of demonstrating competence in locating Koala's. Prior to the commencement and during felling operations, it is the responsibility of the Koala spotter to be present at the site of felling operations identify any tree at the site within which a Koala is present, as well as any tree that has a crown which is intermeshed or overlapping with such a tree; and advise the person who is authorised to conduct the felling operation, or that persons' representative, of the precise location of each such tree Management Item.	SITE SUPERVISOR	Prior to the commencement, and during clearing	Inspected by EDQ or the Environmental Site Coordinator
2.3	CLEARING PATTERN / FAUNA FLUSHING Clearing occurs once the fauna spotter-catcher gives sign off the site is clear of significant native species. The intended clearing directions is towards the proposed Public Open Space Area along western portion of site. Clearing direction is subject to amendment by the fauna spotter-catcher. At the completion of operational works, and prior to the sealing of survey plans for the relevant stage, the fauna spotter-catcher must provide certification to EDQ officers that all works were undertaken in accordance with these fauna management requirements and specific EDQ requirements.	SITE SUPERVISOR	Prior to the commencement, and during clearing	Inspected by EDQ or the Environmental Site Coordinator

PROJECT:

STAGE 2 SEVENTEEN MILE ROCKS ROAD OXLEY (600SP236626 / 551SP142916)

environmental management

PLAN OF:

Vegetation Clearing & Fauna Management Plan

DATE

22/10/2021

CHECKED:

JG

CLIENT REF:

9216

DRAWN:

MP

DRAWING No.:

9216 E 10 VCFMP Stage 2 D

● Native tree not part of this application

▲ Exotic tree not part of this application

● Native tree removed

▲ Exotic tree removed

● Native tree to remove for Stage 2

● Significant tree subject to arborist assessment Stage 2

● Native tree subject to arborist assessment Stage 2

● External native tree to remove during tree clearing for Stage 2

● Native tree to retain during tree clearing for Stage 2

● External native tree subject to arborist assessment

● Native tree to remove during tree clearing for remediation works

● Weed tree to remove during tree clearing for remediation works

● Native tree to remove during tree clearing for Stage 2 stockpiling

▲ Weed tree to remove during tree clearing for Stage 2 stockpiling

● Native tree to retain

● Significant tree to be retained

● Retention during clearing for remediations works subject to works extent / requirements

— Project Site

— Tree Protection Fence

■ Extent of Cut

■ Extent of Fill

■ External works

● Vegetation stockpile location (indicative)

→ Vegetation clearing direction

Vegetation Clearing & Fauna Management Plan - Clearing Direction

Tree Schedule - Job 9216																															
53 Seventeen Mile Rocks Road, Oxley (The Minister for Economic Development Queensland)																															
10/12/2020																															
Specimen Details											Canopy Condition Details							Trunk Condition Details					Fauna Details and Habitat Value								
Tree ID	Botanical Name	Common Name	Trunk DBH (mm)	Additional Trunks DBH (mm)	Total DBH (mm) [AS 4970-2009]	Trunk Circumference (cm) [AS 4970-2009]	Height (m)	Spread (m)	Tree Protection Zone (m)	Structural Root Zone (m)	Canopy Form	Spreading	Thinning	Die-Back	Epicormic Growth	Lopped	Canopy Health	Leaning	Vines	Trunk Damage	Fire Damage	Trunk Health	Scats	Scratches	Hollows	Nest	Termite Nest	Habitat Value	Retention	Additional Notes	
1	<i>Ficus macrophylla</i>	Moreton Bay Fig	580	290, 260	699	219	12.0	14.0	8.4	2.8	Regular	-	-	-	-	-	Typical	-	-	-	-	Typical	-	-	-	-	-	-	-	Not part of this application	
2	<i>Eucalyptus siderophloia</i>	Grey Ironbark	730		730	229	25.0	14.0	8.8	2.9	Regular	-	-	-	-	-	Typical	-	-	-	-	Typical	-	-	-	-	-	-	-	Not part of this application
