LANDSCAPE INTENT

The focus of the proposed landscape design is to provide an outcome that requires minimal maintenance and can withstand the harsh local climate. This has been achieved through three main treatments:

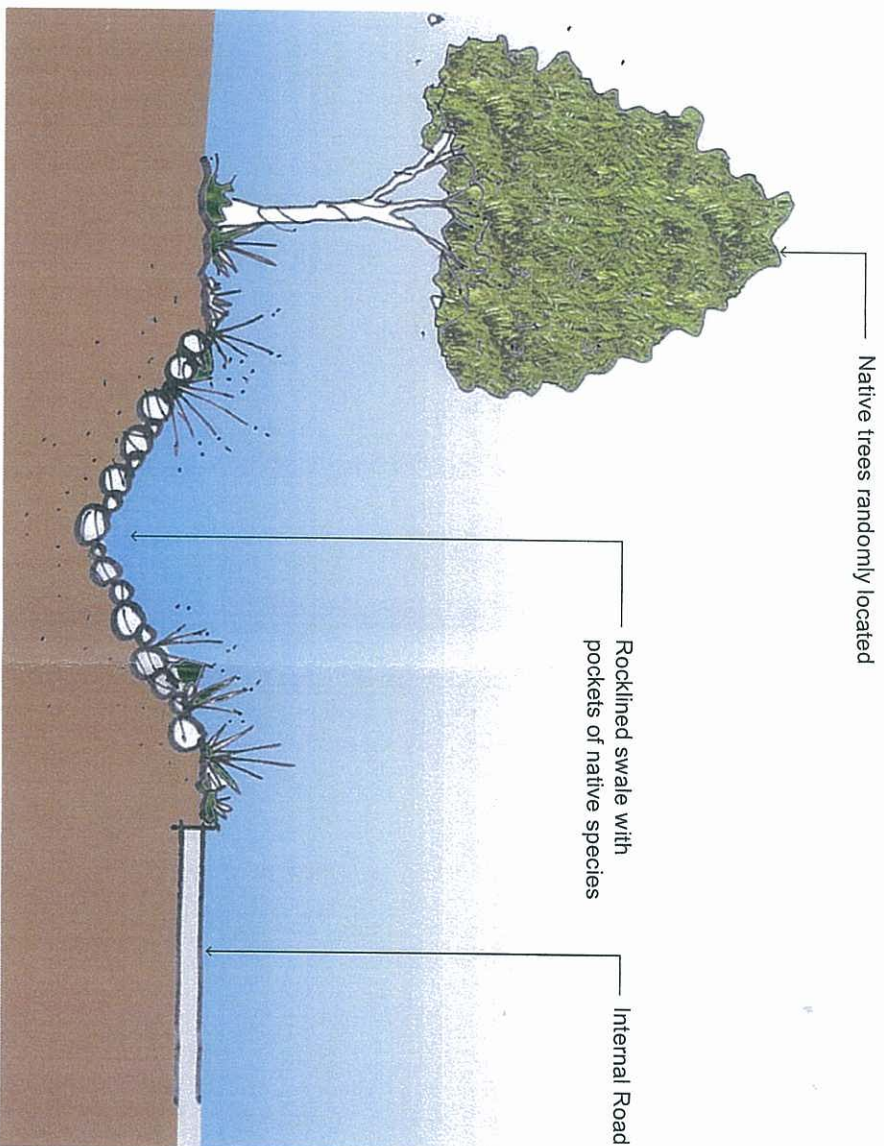

- 1. Artificial turf
Artificial turf will provide outdoor recreational opportunities similar to that of traditional lawns, without the need for ongoing maintenance. Visually, it will soften the harsh surrounding environment.
- 2. Hard paved surfaces
Surface treatments such as concrete provide practical and usable areas which require minimal maintenance. The range of product and colour options will enable the design to complement the local character, provide interest within the landscape and identify key user areas. The use of gravel within the external surrounds of the units will compliment the artificial turf.
- 3. Plant selection
Drought tolerant native plants that require minimal ongoing maintenance will be vital in achieving a long-term landscape solution. Plants are proposed to be procured on or near the site to enable a better success rate.
