Vegetation Clearing and Fauna Management Plan - *Notes*

INTRODUCTION

The Environmental Management Division of the Saunders Havill Group (**SHG**) was engaged by **MIRVAC Queensland Ltd** to prepare a Vegetation Clearing & Fauna Management Plan (VCFMP) for Precinct 8 and 10 of the Everleigh Project.

The purpose of this plan is to manage the vegetation removal and fauna management processes within the vegetation clearing area. This VCFMP was compiled to support the Precinct 8 and 10 development application to Economic Development Queensland (**EDQ**) prior to clearing works commencing. The clearing works will follow general principles for vegetation clearing documented on this sheet and all **EDQ** specific requirements. This VCFMP has been produced by overlaying the following site datasets to determine impacts and disturbance on existing vegetation:

1. GPS/survey accurate tree data including specimen details & features (**SHG**,2018-2022)
2. Site Inspection of Existing Habitat features (SHG, 2022)
3. Everleigh Master Plan (URBIS, 2022)
4. Precinct 8 & 10 civil design & earthwork plans (Premise, 2022)
5. Arborist inspection (TBC)

PROJECT MANAGEMENT

Vegetation management and its processes are an integral part of the construction and operational works phases. The site supervisor is responsible for all onsite works including overseeing vegetation clearing, health and safety of fauna and adhering to **EDQ**'s conditions and guidelines, as well as the Australian Standards - Protection of Trees on Development Sites AS4970-2009 and Pruning of Amenity Trees AS4373-1996.

The project arborist (with minimum AQF Level 5 in Arboriculture and minimum 5 years' experience) is responsible for: undertaking all appropriate arboricultural measures prior to the commencement of any earthworks on site to ensure the survival and long-term health of existing trees to be retained. These measures may include soil decompaction, soil aeration, fertilising, mulching, watering, root or crown reduction and hazard reduction or as otherwise determined by the arborist. The site arborist is also required to direct and supervise all works within TPZs of trees to be retained, and perform arboricultural care requirements where necessary.

The roles and responsibilities of the Fauna Spotter-catcher are provided on *Sheet 3*.

SITE CONTACTS

Site and consulting contacts for queries relating to vegetation clearing include:

Client Contact:
MIRVAC Ltd
Mr Jason Augustine
Ph (07) 3959 5960

Environmental Contact:
Saunders Havill Group
Laura Thorley
Ph (07) 3251 9444

Site Contractor:
To be advised

Site Arborist:
Site Contractor to advise

Site Fauna spotter-catcher:
To be advised

(Refer to Fauna Management Plan)

Site Bushfire Consultant:
Robert Friend & Associates
Robert Friend
(07) 3891 9131

CLEARING PHASES AND PROCESS

PHASE 1 - Tree Protection Fencing to be installed

Fencing to be installed prior to the commencement of any clearing works on the site. Tree protection fencing to be located at or beyond 12 x diameter at breast height (DBH) (AS4970-2009 Protection of trees on development sites)—unless approved by the appointed arborist.

PHASE 2 - Fauna Inspections and Management

Undertake necessary fauna management requirements prior to clearing works - as a minimum, this should include the specifications listed on sheet 3, and a pre-clearance report provided to the Environment Coordinator and Site Supervisor.

PHASE 3 - Pre-start Meeting

Fencing shall be in place at the time of the pre-start meeting for inspection and sign off by the Environment Coordinator and Site Supervisor. As per detail sheets of this VCFMP, protection fencing will be placed along the tree protection zones of trees within the EPBC conservation area. Proposed works within these areas will be reviewed by the project engineering and arborist to ensure safe retention of the tree/s.

PHASE 4 - Undertake Bulk Clearing

Undertake wholesale removal of vegetation once all necessary pre-works checks have been provided. Clearing will occur in the direction outlined in *sheet 31* of this VCFMP, and managed by the appointed fauna spotter-catcher to allow all fauna unimpeded movement east towards the currently retained vegetation over future stages.

Vegetation clearing techniques:

By utilising the most appropriate machinery and equipment during vegetation clearing, the probability of injury or death of wildlife during clearing can be significantly reduced or eliminated while still maintaining an efficient vegetation removal process.

Suggested techniques are as follows: (a) a vertical tree grab attachment on an excavator (30 tonne) can be used to pull entire trees in size up to 30-40cm diameter at a height measured at 1.3 metres above ground level and lay them down in a steady controlled fashion, allowing inspection by a fauna spotter-catcher (b) where large trees are too large for a vertical tree grab and have been identified, an elevated work platform or where practical, cherry picker should be used in conjunction with a chainsaw operator and fauna spotter-catcher. Alternatively, careful removal of hollow section from habitat tree and gentle lowering for inspection by fauna spotter-catcher (c) the use of bulldozers to clear vegetation is limited to vegetation that has been thoroughly inspected by a fauna spotter-catcher and is found to contain no fauna or potential habitat. Bulldozers are not to be used to push over large trees that contain hollows or other habitat features.

NOTE: Dogs are not permitted onsite at all times during construction. Construction works including clearing must occur between the hours of 6.30am and 6.30pm.

EPBC CONSERVATION AREA BOUNDARY CLEARING PROTOCOL

Precinct 8 and 10 vegetation clearing adjoins the EPBC Conservation Area boundary (EPBC 2016/7817). Trees located within the EPBC conservation area must be retained. To ensure the avoidance and minimisation of impacts to the EPBC Conservation Area, the following is to be implemented:

- Tree protection fencing to be positioned around the TPZ of EPBC Conservation Area trees
- Tree protection fencing to be inspected by environmental supervisor prior to the commencement of clearing
- Arborist must be present for all clearing activities along the EPBC conservation area boundary
- Record, if any, trees located within the EPBC Conservation Area have been removed or significantly impacted by works.
- Report removal or impacts to trees to the Environmental Coordinator.

ACCESS AND STOCKPILING

A vegetation stockpiling location is to be designated in an easily accessible area outside of TPZs. An indicative vegetation stockpiling location has been allocated adjacent to the waterway corridor, allowing for material to be easily utilised for future rehabilitation works. This location is subject to minor change according to cut/fill activities and intended location for reuse.

Cleared vegetation free of weeds is to be reused on or off the project site. Recycling techniques include mulching, tub-grinding, wood chipping and salvage (e.g. custom milling). Trees with identified hollows should have the hollow section preserved and should be suitably mounted on nearby or adjacent suitable trees.

MAINTENANCE

After tree clearing works on site, an analysis of the vegetation's health and growth should be undertaken by the project arborist to determine specific maintenance needs. Follow up maintenance works should be carried out on retained vegetation where required.

Tree Protection Fencing - Detail (not to scale)

Vegetation Clearing and Fauna Management Plan - *Fauna Management Notes*

INTRODUCTION

The Fauna Management specification on this *VCFMP* is designed to protect native animals and control/manage impacts during the vegetation clearing works. The vegetation clearing area occurs within the Precinct 8 and 10 works area. Common species associated with semi-urban/urban/bushland landscapes were spotted at the clearing area during the ecological survey. Koalas have been spotted in and around the Precinct 8 and 10 area in various ecological surveys. The fauna management specifications and principles incorporated in this *VCFMP* applies generically to all native animals and focuses on avoiding conflicts and incorporating measures to minimize disturbance. Compliance with this section of the *VCFMP* is compulsory and incorporates the use of expert consultants including a Fauna Spotter (holding a valid Wildlife Rehabilitation Permit issued by the **Department of Environment and Science**.)

FAUNA IMPACTS

Clearing of vegetation provides an obvious source of impact to existing habitat and animal safety. More specifically the existing vegetation provides habitat, movement and protection opportunities for some fauna through both regrowth and canopy trees. These opportunities are to be altered during and post vegetation clearing works.

CONSTRUCTION IMPACTS

- Direct removal of site vegetation
- Loss of habitat
- Noise, vibration and dust
- Erosion and sedimentation
- Threats associated with open cuts etc. and fauna entrapment
- Loss of food sources
- Excavation/compaction/changes in ground levels
- Altering hydrological flows
- Fragmentation of habitat

OPERATIONAL IMPACTS

- Weed introduction (garden escapees)
- Increased hydrology with increased hardstand
- Altering of run-off chemical and nutrient components (quality)
- Barriers to fauna movement
- Vehicles and pedestrian movement and trespass
- Introduction of domestic and predatory species

Fauna Management Schedule

Ref:	Management Item	Responsibility	Timing	Reporting
1.0 PRE CLEARING				
1.1	**TEMPORARY FENCING** Prior to the commencement of works and to be inspected by the site Environmental Coordinator—Delineate areas where vegetation is proposed to be retained with exclusion fencing to prevent accidental felling. Clearing is to be undertaken in accordance with AS 4970-2009 Protection of Trees on Development Sites. ▪ Fencing shall be fauna friendly ▪ No clearing, stockpiling, site access, earthworks, storage, etc. is to occur within the temporary protection fencing. ▪ Only approved weed management works to occur within the temporary protection fencing ▪ Fencing to be reinstated immediately if damaged or knocked down, any damage to retained trees to be immediately reported to Project Arborist. ▪ Fencing to remain until the completion of all site works.	SITE SUPERVISOR	Prior to the commencement of clearing	Inspected by Environmental Coordinator
1.2	**CONTRACTOR EDUCATION & AWARENESS** All site contractors and subcontractors will be made aware of their responsibilities to protect native fauna. The Fauna Management notes on this VCFMP are provided as a working document to assist on-site management and protection of native animals. This generally will form part of education and training for broader work place health and safety but as a minimum will include: ▪ Copy of VCFMP kept on-site (Site Office). ▪ General education and awareness notification of contractors and sub-contractors involved in activities potentially impacting native animals as part of site induction – contractors must know the location of the VCFMP, key phone numbers and who to report to if they breach the VCFMP. ▪ A list of relevant contact phone numbers as listed on these drawings is kept in a visible and accessible location in the site office.	SITE SUPERVISOR / THE PROPONENT	Prior to the commencement of clearing and as part of the site induction for new staff and sub-contractors	SITE SUPERVISOR
2.0 VEGETATION CLEARING				
2.1	**SPOTTER / RELOCATOR** Immediately prior to the commencement of clearing of native vegetation a daily visual inspection of the area must be carried out by the fauna spotter-catcher. Furthermore, the fauna spotter-catcher is to be present on site during all clearing operations to supervise and direct clearing works, and to respond to any situations that may arise in relation to fauna. In the event of an animal being located, a suitable buffer area (as determined by the fauna spotter-catcher) should be established around the animal's location that excludes machinery until it has relocated at its own accord (usually overnight). If an animal requires relocating this must be undertaken by a suitable qualified fauna expert recognized by the **Department of Environment & Science**. For some fauna, specific permit requirements may apply. If vegetation is left stockpiled for more than 24 hours or overnight, the fauna spotter-catcher must inspect the vegetation prior to chipping or removal from site. The Fauna Spotter-catcher will manage the care of any injured or orphaned wildlife (e.g. veterinary attention or delivery to a wildlife carer). Any native fauna listed as a threatened species under the Nature Conservation (Wildlife) Regulation 2006 that are injured or orphaned by the development process, must be reported to the **Department of Environment & Science** (1300 130 372). Any other injured or orphaned fauna must be reported through the Rehabilitation Permit return process by the Fauna Spotter-catcher. The Site Supervisor is responsible for the safe management of site fauna and implementation of these specific fauna requirements.	SITE SUPERVISOR	Prior to the commencement, and during clearing	Inspected by the Fauna Spotter-catcher
2.2	**SPECIFIC KOALA MANAGEMENT NOTES** A Koala Spotter is a person who holds a tertiary qualification in Biology or Zoology, or who is demonstrably experienced in the identification and location of Koalas in their natural habitat. For example, a koala keeper employed by a licensed Wildlife exhibitor (i.e. a zoo) may be capable of demonstrating competence in locating Koala's. Prior to the commencement and during felling operations, it is the responsibility of the Koala spotter to be present at the site of felling operations identify any tree at the site within which a Koala is present, as well as any tree that has a crown which is intermeshed or overlapping with such a tree; and advise the person who is authorised to conduct the felling operation, or that persons' representative, of the precise location of each such tree Management Item.	SITE SUPERVISOR	Prior to the commencement, and during clearing	Inspected by the Fauna Spotter-catcher
2.3	**CLEARING PATTERN / FAUNA FLUSHING** Clearing occurs once the fauna spotter-catcher gives sign off the site is clear of all native species and all necessary permits are obtained. The intended clearing directions is out from existing cleared areas towards currently retained vegetation to the east/north of the proposed clearing. Clearing direction is subject to amendment by the fauna spotter-catcher. At the completion of operational works, the fauna spotter-catcher must provide certification to the environmental coordinator that all works were undertaken in accordance with these fauna management requirements.	SITE SUPERVISOR	Prior to the commencement, and during clearing	Inspected by the Fauna Spotter-catcher
