DESIGN CONTEXT ANALYSIS

@ A1

DA00.08

05-03-2024

rev. 2

DESIGN STATEMENT

ELEMENTAL CRITERIA

This section provides responses to each of the buildings that breathe elemental criteria.

1. ORIENTATE YOURSELF

1.1 Location & Orientation

The proposed development at 15 – 21 Wren Street, is situated on the corner of Campbell and Wren Street and is integrated with the Wren Street building competed in 2020 which is also a property owned by the applicant for this development.

Consistently with the intention of the Bowen Hills PDA, this development is compliant with the height, density and usage identified for this area. The proposed building includes the following uses and functions:

- medical tenancies including an extension to the existing Herston Private Hospital,
- build to rent apartments and communal areas,
- small commercial tenancies and car parking.

The site for this development is part of the RBWH precinct and continues the growth of medical and health facilities in this area while the build to rent apartments cater for a demand for accommodation in this precinct some of which will be affordable accommodation in accordance with the requirements of the Bowen Hills PDA.

1.2 Massing & internal layout

The form of the proposed buildings consists of three components: the base, the podium and the tower.

The base is a glass enclosed volume housing the commercial and retail tenancies which addresses both Wren and Campbell Streets.

The podium which contains the commercial tenancies and which aligns with the form of the stage 1 Wren Street building. The screen, which is integrated with the perimeter of the podium, steps up with the steepness of Wren Street until it meets the stage 1 building.

The tower. The tower steps back from the line of the podium and accommodates the 244 build to rent apartments.

At level 10, which is the top of the stage 1 building, social and common areas for the BTR apartments which consist of both internal and external forms with the external areas are provided. This feature further provides a pleasant and verdant foreground view to the BTR residents who live in south facing apartments.

1.3 Views

Residents of the BTR apartments are afforded uninterrupted views to the city skyline, views to the bay, views over Brisbane's eastern inner northern suburbs & views to Mt Coot-tha & the hills of Brisbane Forest Park.

1.4 Street Activation

The building has two street frontages on both Campbell St & Wren Street. The main entry to the building comes off Wren Street where access to the lift core is provided. The Campbell Street frontage is restricted by being within a flood zone however an active edge along this street frontage is provided via a small commercial tenancy suitable for a café or food outlet. Campbell Street also provides access to the secure bicycle parking area at the lower ground level of the building.

Vehicle access to the building is maintained by the Stage 1 building access points. All vehicles parked on site enter via the existing multi storey car park access ramp. Deliveries, service vehicle and emergency vehicles are provided off street parking via the re-entrant bays which come off Wren Street.

2. OCCUPY OUTDOOR SPACES

A fundamental part of BTR accommodation is to provide both internal and external communal and shared spaces for the residents. Space for work, leisure and social function. All of these functions are provided on Level 10 and include:

- Gymnasium
- Cinema
- Co-working area
- Meeting Room
- BBQ Area
- Swimming Pool
- Hard and soft landscaped external areas
- Seating booths to the perimeter of this space which are surrounded by the landscaped areas

2.2 Sky Terrace

The building includes two prominent areas which are accessible to residents and staff of the building. At Level 10, the common and communal spaces for the BTR apartments are provided. These areas include spaces for both active and passive recreation and they are integrated with landscaping of these spaces. At the roof top of the tower, an additional sky terrace is provided. This extends the functionality of the area roof top common areas for the users of the building.

2.3 Balconies

The BTR apartments each have at least one balcony which provides private open space for each resident. These deep-set balconies furthermore provide an all-weather external space for the residents.

2.4 Laneways & Cross block links

Access for residents and visitors to tenancies. Ample landscaping and public zone to front of the entry with shade above. Permeability of the ground floor plane for residents and visitors of the building, along with access for Campbell Street for users of the Café tenancy.

3. ILLUMINATE WITH DAYLIGHT

Each component of the building, the base, the podium and the tower has been designed to incorporate an appropriate amount of glass specific to the function of each area. At the ground level, which is set back from the podium perimeter, large areas of glass are provided to provide the feeling of lightness and transparency. At the podium level, the tenancy spaces have floor to ceiling glass which while being high performance glass is also protected by awnings which extend from the building. Large glass in the perimeter of the tenancy areas provides an improved experience for the users of those spaces. For the BTR apartments, the glazing components consist of aluminium framed windows and doors which are domestic in their sizing and scale thus reinforcing the domestic scale of the apartments.

4. NATURAL AIR AND VENTILATION

The residents and workers in this building will be provided a greater control over their indoor environment with the ability to open windows and sliding doors in the perimeter walls of the building. Opening windows in the building façade will also allow passive cooling to spaces in the building by allowing breezes to flow deep into the BTR apartments as well as the BTR communal areas.

The screening which envelopes part of the building further permits natural air and ventilation to circulate and pass through the building. For the car park levels of the building this approach reduces the reliance on mechanical ventilation which has the embodied issues cost, noise and concentration of car park exhaust around the building.

5. SHADE AND PROTECTION

The abstracted hexagonal form of this building extends from the ground level through to each of the facades of the tower. As well as being a strong visual element in the building design, this form also becomes an integrated shading device to the building.

In addition to the abstracted hexagonal form, the balconies to the BTR apartments have deep setbacks which provide shading to rooms they access.

At the level 10 external common areas, canopies and shade structures are integrated into the landscaping of these spaces. This measure increases the use of these spaces in all of the extremes of climate which Brisbane experiences.

6. LIVING GREENERY

Laud Ink are the landscape architects who are part of the design team and they have worked closely with the architectural team to design planting areas at prominent locations of the building and in a manner which will enhance the experience of the people who live, work and pass by this building.

Greenery is integrated into the ground plane on both Campbell Street and Wren Street as well as along the verge of the bike path. At Level 10 in the external common areas for the BTR residents, greenery provides a sense of natural enclosure as well as privacy and shade to users of this space and at the rooftop of the tower greenery provides a trim which softens what would otherwise be a hard and open space for the people who use this level.

The elevated gardens which are incorporated into the building, capture rainwater and as well they mitigate the effects of the urban heat-island effect.

6.5 Maintain the Greenery

A building maintenance regime will be established to ensure lush landscape is adequately maintained and regularly irrigated in accordance with the landscape architects' specifications.

DESIGN STATEMENT

ELEMENTAL CRITERIA

7. IDENTITY MATTER

The Wren Street building is integrated with the stage 1 building which was completed in 2020. The car park façade on both the eastern and western facades of the stage 1 building includes a dominant hexagonal form. The stage 2 building continues the hexagonal motif in the base, the podium and the tower component of this development. The hexagonal form in this building is developed and abstracted to become an integral part of the building on all facades.

7.1 Choice of Materials

The materials used in this development will continue the palette of materials from Stage 1. Concrete, Glass and aluminium trims and screen form the dominant components of the building.

7.2 Longevity

These materials have been selected for their robustness which will maintain the original look of the building for the life of the building. The material palette has also been selected as they require minimal maintenance.

7.3 Public Art

The stage 1 building contains a component of public art work adjacent the main entry to the building and a component of public artwork will be included in this next stage of development.

7.4 Creative Lighting

The stage 1 building contains lighting which expresses the hexagonal form on the building. Similar to the stage 1 building, lighting will be included in the design of the ground plane, the podium and the tower component which will reference the stage 1 hexagonal feature and as well express the identity of the key parts of this building.

8. REDUCE ENERGY AND WASTE

8.1 Energy and Technology

The Build to Rent component of this development will be wholly owned by one entity with the apartments rented to both short and long term tenants. This structure provides the opportunity to establish an overall efficient system for each of the building services. Further investigation of this approach will be undertaken at the design development phase of the project to determine the best systems to implement this approach.

A consolidated approach to the building services is also a means of reducing operational costs through bulk supply and servicing efficiencies for the residents and tenants of the building.

The fabric of the building will be designed to surpass the minimum requirements of the NCC part J for Energy Efficiency and at this stage a number of the rating systems for the building designed are being considered in terms of appropriateness and best offering for the overall energy efficiency rating of the building.

8.2 Water and Waste

Water efficiency has been considered in the design of the Wren Street development. Efficient fittings will be selected for both residential and commercial uses to reduce water consumption and rainwater harvesting for the irrigation of the landscaping on site at both ground level and the level 10 podium top will be provided.

Waste management plan has been prepared to encourage convenient recycling access for the residents. TTM consultants have prepared a report which quantifies and proposes a management solution for the collection and removal of waste, medical waste and recycling from this site.

8.3 Active Transport

The development site is well positioned to provide active and public means of transport for all people living, working and using the medical and health facilities provided on site. Alternative modes of transport to car transport are encouraged as part of this development due to the site's proximity to bus, train and bicycle networks.

Brisbane has an extensive network of dedicated bike paths and the building is adjacent the bike path which extends connects Fortitude Valley and Victoria Park to Brisbane's inner northern suburbs. The bike path which runs along the eastern boundary of the site and is parallel to Wren Streets reaches a natural stopping point when it reaches its intersection with Campbell Street. The building takes advantage of this slowing down of bike traffic by providing dedicated bike parking area as well as retail tenancies and end of trip facilities provided as part of the tenants of the site.

The site is in close proximity of the RBWH bus station which is being upgraded as part of the Brisbane Metro.

The is also in close proximity to the fortitude valley station as well as the newly planned permanent exhibition station as part of the Cross River Rail.
