Guideline 14	*Guideline No. 14 – Environmental values and sustainable resources*
Guideline 17	*Guideline No. 17 – Remnant vegetation and Koala habitat obligations in Greater Flagstone and Yarrabilba PDAs*

1. Introduction

Saunders Havill Group (SHG) was engaged by Mirvac Queensland Pty Ltd to prepare an Ecological Technical Memo in response to Economic Development Queensland's (EDQ) *PDA Guideline No. 14 – Environmental values and sustainable resources* (Guideline 14) to support an Operational Works (OPW) application to EDQ. The study area for this report is residential – Balance Impact area within the Everleigh master planned development (refer **Figure 1** for Site Context and **Figure 2** for Site Aerial).

The broader project site is located within the Greater Flagstone Priority Development Area (GFPDA) and as such is governed by EDQ. Although being entirely included within the Logan City Council (LCC) Local Government Area, EDQ have jurisdiction for the implementation and enforcement of development applications in relation to the project as a key regulator of development within Priority Development Areas (PDA) for the Department of State Development and Infrastructure (DSDI). Despite this legislative position on assessment, the majority of infrastructure assets, inclusive of open space and the proposed Conservation Area, ultimately transition to the ownership of LCC.

Contextually, the subject area is located approximately 10 kilometers (km) west of Logan Village and 25 km south-east of Ipswich. The broader site is currently undergoing earthworks and construction for earlier stages of the masterplan development (refer **Appendix A**).

2. Ecological assessment methodology and process

2.1. Desktop review

Prior to the commencement of field surveys, a desktop analysis was conducted of Commonwealth, State and Local environmental databases and overlay mapping, and included the following:

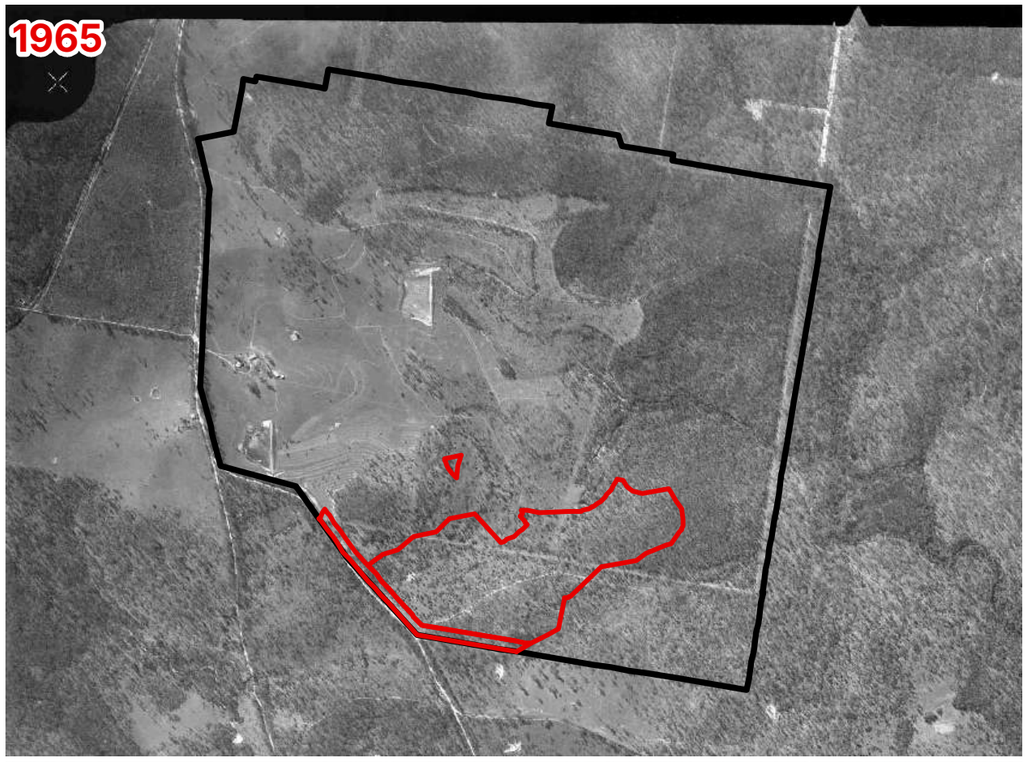
- Commonwealth Matters of National Environmental Significance (MNES) protected under the EPBC Act on and around the site using the protected matters search tool with a 5 km radius (refer **Appendix B**);
- *Nature Conservation Act 1992* (NCA) listed threatened species on and around the site using the wildlife online database search tool with a 5 km radius (refer **Appendix C**);
- public environmental databases including Atlas of Living Australia, BioMaps and the Australian Koala Foundation (AKF); and
- regulated vegetation management and vegetation supporting maps under the *Vegetation Management Act 1999* (VMA).

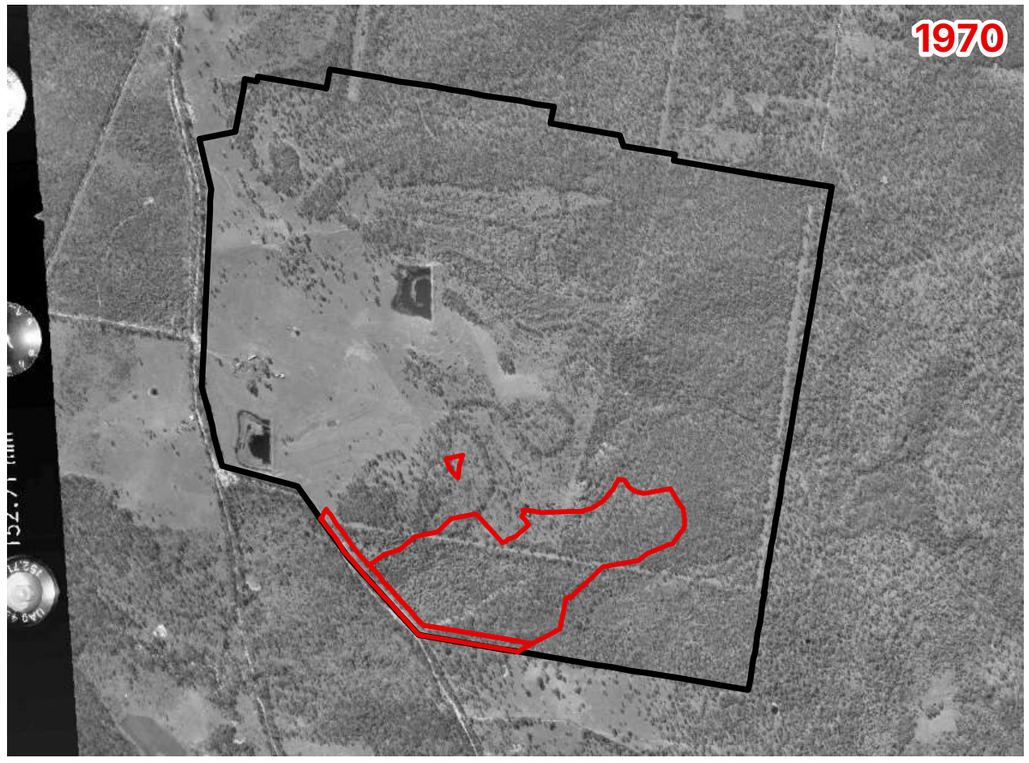
2.2. Aerial history analysis

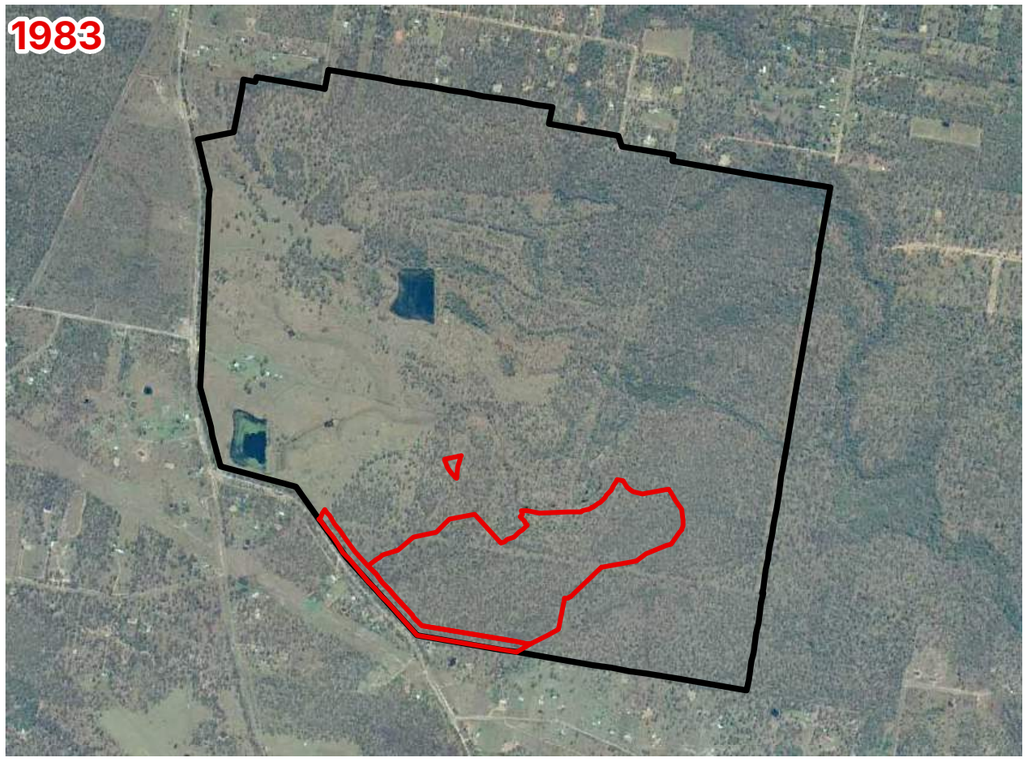
A review of historical aerial imagery over the balance impact area dating from 1965 to 2003 identifies the periodical changes which have occurred in the local landscape (refer **Plan 1**). General observations include:

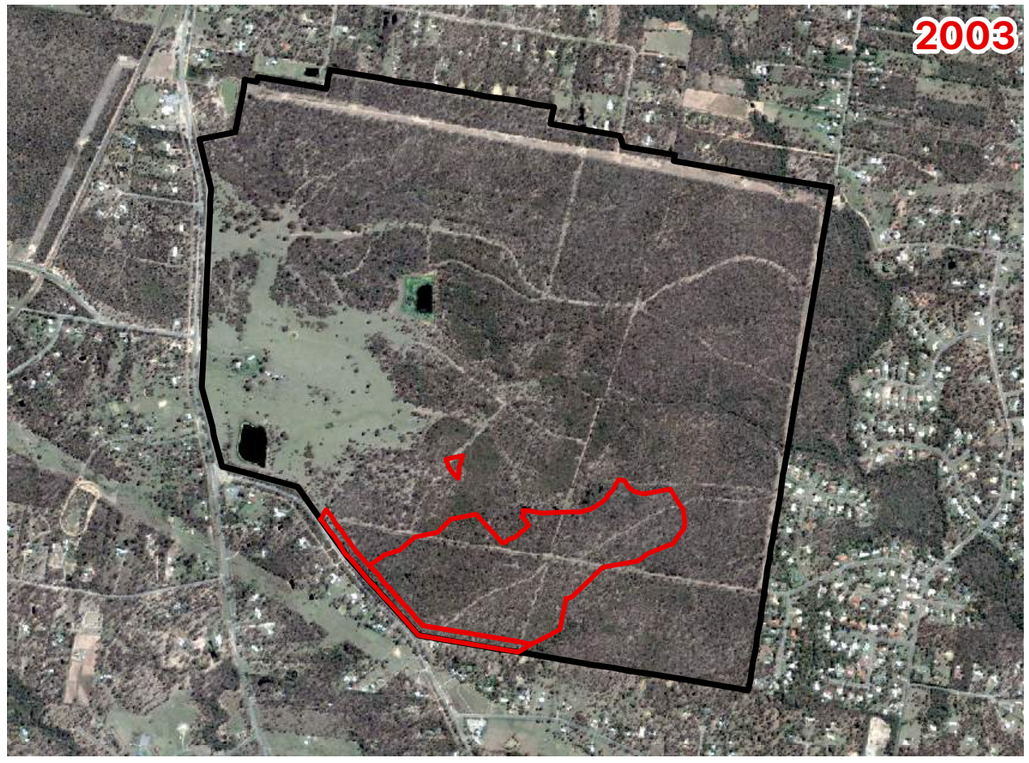
- Aerial photography from 1965 shows the balance impact area was predominately composed of scattered trees, with access tracks and fire trails visible within central areas of vegetation. Of the historically cleared sections, only sparse vegetation and what appears to be regrowth was present in 1965.
- Imagery from 1970 shows some areas have decreased from the scattered nature of 1965. This is presumably due to tree growth over the five years. Access tracks and fire trails continue to be visible through central potions of the balance impact area.
- Aerial imagery from 1983 displays the continued growth of the vegetation within the balance impact area since the 1970s. Rural-residential development has commenced over adjoining properties to the north, south and south-west of the balance impact area.
- Imagery from 2003 shows areas of continued vegetation regrowth across the balance impact area. Residential development has also commenced within much of the surrounding landscape since the early 1980's. The northern extent of the broader project site, abutting the site has been cleared for an infrastructure easement.

01. REVIEW OF AERIAL HISTORY









Notes:
The information on this plan is not suitable for any purpose other than the expressed use of the Client. Property dimensions, areas, numbers of lots and contours and other physical features may need verification if the development application is approved and development proceeds, and may change when a full survey is undertaken or in order to comply with development approval conditions. No reliance should be placed on the information on this plan for detailed design or for any financial dealings involving the land. Saunders Havill therefore disclaims any liability for any loss or damage whatsoever or howsoever incurred, arising from any party using or relying upon this plan for any purpose other than as a document prepared for the sole purpose of accompanying a development application and which may be subject to alteration beyond the control of Saunders Havill.Unless a development approval states otherwise, this is not an approved plan.

2.3. Field survey methodology

Extensive ecological field surveys have been conducted across the development site utilising methods outlined below to describe ecological value.

2.3.1 PMAV surveys

Each Regional Ecosystem community had been previously accurately surveyed, including producing detailed floristic lists, and checks for any threatened species, or habitat that may support these species. The PMAV process produced accurate data on projected foliage cover and age structure of each vegetation community. Detailed data sheets and GPS markings were recorded within each site using the Queensland Herbarium Map Assessment Request forms.

2.3.2 Observational Survey for Significant Flora and Fauna, Habitat Trees and Biodiversity Values

The site was walked several times where possible to ensure all species (flora and fauna) were recorded and identified. Particular attention was paid to any threatened species that were listed as possibly occurring on or within the vicinity of the site and specific micro-assemblages that may support these threatened species. This included observations for vertebrate fauna present on or that may utilise the site, including faunal lists and significance status of species under the Commonwealth's EPBC Act including the JAMBA, CAMBA, ROKAMBA and the Bonn Convention, and Queensland's NCA.

The observational survey included identification of ecological features and values such as broad vegetation communities, fauna habitats, and connectivity. Specific attention was paid to threatened flora and fauna species.

For the purposes of this report, a significant flora and fauna species has been defined as a species that is scheduled as 'critically endangered', 'endangered', 'vulnerable' or conservation dependent under the Commonwealth EPBC Act of Nature Conservation Act.

2.3.3 Scats, tracks, and other traces search

Surveys for scats, tracks and other fauna traces were conducted throughout field surveys as part of the observational surveys. Both predator and non-predator scats were sought during all searches. Specific search efforts were made to locate the presence of Koalas or evidence of their occurrence on the subject lands and the local area. In addition, particular attention was paid to the identification of potential dens, scats and tracks for invasive species, such as wild dogs, European red foxes and domestic cats, to identify predator-prey interactions and understand existing impacts within the site.

2.3.4 GPS tree plot

A tree plot survey was conducted across the site to locate and describe the vegetation values, namely the native mature tree specimens (≥ 100mm DBH) and those considered to contain habitat features. A handheld GPS device (Trimble) was used to record locations (accuracy ±1 m), and the following parameters of each tree specimen were recorded: tree species, via a combination of observations of the gum nuts, buds, leaves, bark and growth form;

- diameter of the trunk of the tree measured using the standard method of Diameter at Breast Height (DBH);
- height of the tree measured using a laser rangefinder with three-point measurement capability (inclinometer);
- canopy spread;
- health assessment (canopy, trunk); and
- habitat values (for example, presence and/or number of hollows, nests, termites, scratches and scats).

2.3.5 Koala habitat and Spot Assessment Technique surveys and meanders

Spot Assessment Technique (SAT) surveys were conducted across the site with the aim to assess Koala usage. SAT surveys follow the methodology designed by Phillips and Callaghan (2011). It involves a single Ecologist combing the ground under Koala food plant trees (or non-food plant trees if necessary) for a 1-metre radius around the trunk searching for scats. Each tree searched must be greater or equal to 100 mm diameter at breast height (DBH) and search of each tree continues for up to 2 minutes. The search can cease prior to the 2-minute limit if scats are detected. Thirty trees meeting the specifications are analysed during each SAT survey.

2.3.6 Nocturnal active searches and spotlighting

A combination of high-powered spotlights and head torches were used to detect nocturnal mammals, birds, reptiles within the site. This non-intrusive technique is the most effective method to obtain estimates of nocturnal arboreal mammal incidence and abundance in wooded habitats. Spotlighting also targets medium to large terrestrial nocturnal mammals, and can detect other nocturnal taxon groups (e.g., frogs, geckoes, nocturnal snakes, nocturnal birds, spiders).

A combination of high-powered spotlights and head torches were used to sample for nocturnal mammals, birds, reptiles and frogs across the proposed action area. This technique involved detecting eye shine, and a record of vegetation density was taken. Additional information recorded included the prevailing conditions and search effort.

2.3.7 Motion sensor camera detection

Camera trapping involves setting up a fixed digital camera to capture images or video of animals that pass in front of a camera with an infrared trigger. It is a non-invasive technique designed to detect medium to large sized animals as they pass, although it is possible to detect smaller animals depending on the set-up. This method identifies fauna activity beyond the scope of direct observational studies and with the absence of potential observer impacts.

2.3.8 Incidental bird observations

This technique is a non-intrusive active area search that provides an estimate of diurnal bird species occurrence and abundance. Inclement weather was avoided as this greatly reduces the detection of bird species. The abundance of flowering trees at the survey site was observed, as this can influence the abundance and composition of nectar feeding diurnal birds. Further observations were recorded over several hours during other survey activities. Birds were identified from either direct observation or by their calls.

3. Legislation, policy and planning instruments

Table 2 below provides a review of contemporary legislative provisions potentially constraining the balance impact area of the Everleigh development as of the reporting date. Maps are provided in **Appendix A**.

Table 2: State and Local governmental legislation and mapping constraints relative to the site.

Legislation	Mapping	Purpose	Contemporary Site Relevance
Environmental Protection & Biodiversity Conservation Act 1999 (EPBC Act)	**N/A**	The Australian Government's key piece of environmental legislation is the EPBC Act. The EPBC Act aims to protect and manage matters of environmental significance which include nationally and internationally important flora, fauna, ecological communities and heritage places.	The Protected Matters Search Tool (PMST) identified thirty-six (36) protected fauna species, eighteen (18) flora species, and eight (8) Threatened Ecological Communities (TECs) as potentially occurring within a 5 km radius of the site (refer **Appendix B**). In 2016, the broader project site was referred and assessed under the EPBC Act (ref: 2016/7817) as the development was determined to have a significant impact on EPBC Act listed species. The action was approved in 2019 and commenced on the 18 November 2019 with the clearing of Stage 1. Impacts on Koala Habitat and Grey-headed Flying-fox foraging habitat are being offset under the conditions of the EPBC Act approval.
Nature Conservation Act 1992 (NCA)	**Appendix A - Map 10**: Protected Plants Trigger Map	The NCA classifies and protects significant areas (Protected Areas) and protects Threatened plant and animal species. The *Nature Conservation (Animal) Regulation 2020* and *Nature Conservation (Plant) Regulation 2020* lists animal and plant species presumed extinct, critically endangered, endangered, vulnerable, near threatened, least concern, international or prohibited.	The Wildlife Online search tool identified ten (10) species listed under the NCA as potentially occurring within a 5 km radius of the site (refer **Appendix C**). Of these, *Phascolarctos cinereus* (Koala) and *Melaleuca irbyana* (Swamp Tea Tree) have been recorded across the broader property. The remaining balance of the approved impact area is mapped as being within the High-Risk Protected Plants Trigger Area. Since the development

Legislation	Mapping	Purpose	Contemporary Site Relevance
			commenced a series of NCA protected plants surveys have been conducted. During these surveys, several patches of *M. irbyana* individuals were identified. A permit to clear *M. irbyana* across the broader urban development extent for the Everleigh development project has been granted by the then Department of Environment and Science. This permit has been renewed as of July 2024 (refer WA0062493 - **Appendix D**). Several *M. irbyana* individuals are located within the balance impact area, namely within the south-western area of the site. Additionally, impacts to Koala have been addressed at the Federal level (refer EPBC 2016/7817).
Vegetation Management Act 1999 (VMA)	**Appendix A - Map 6**: Regulated Vegetation Management Map; **Appendix A - Map 7:** Property Maps Assessable Vegetation **Appendix A – Map 8:** Vegetation Management Regional Ecosystem Mapping	The VMA is the key mechanism by which the Queensland Government protects the state's environmental resources pertaining to vegetation. Under the VMA, a series of maps delineate vegetation features across the landscape which are each assigned a conservation value directly related to the remaining extent of these features in the landscape. The VMA also protects 'essential habitat' vegetation where listed threatened species have been known to occur.	Under the VMA, the balance impact area is mapped as containing predominately Category X (non-remnant) vegetation with polygons of Category B (remnant) 'Of Concern' Regional Ecosystems (RE) (refer **Figure 3**). The site was subject to a PMAV assessment throughout the property resulting in the on-ground vegetation values being mapped. While no changes to the extent of mapped remnant areas were proposed throughout the site, the only change was to the status of remnant areas. As a result, a PMAV has been applied over the majority of the Everleigh development site. This extensive mapping confirms the balance impact area is predominately mapped as Category X (non-remnant) with polygons of lower status Category B (remnant) vegetation. Also mapped within the balance impact area are two (2) Watercourses and Essential Habitat.

Legislation	Mapping	Purpose	Contemporary Site Relevance
			It is important to note that the provisions of the VMA do not apply in a PDA except where relevant to the Development Scheme. Further, the endorsed Natural Environment Site Strategy under DEV2016/768 does not identify any significant biodiversity values within the balance of the Everleigh development impact area (refer **Section 4**).
Koala priority areas and koala habitat areas (administered under the *Planning Regulation 2017* (PR))	**Appendix A - Map 11**: Koala Priority Areas and Koala Habitat Areas	The PR deals with development within mapped Koala habitat areas by regulating the clearing of mapped Koala habitat and stipulating how it must be cleared. The new mapping, implemented in February 2020 uses mapped Koala Priority Areas and Koala habitat areas to determine the response or referral pathway required for the site. Koala Habitat Areas are Matters of State Environmental Significance (MSES) and are reflected in the State Planning Policy. The LCC Planning Scheme mapping has not been updated to reflect these changes. Under Koala habitat mapping, Schedule 11, Part 2 of the PR is not applicable as the premises on which the development is carried out is within a PDA. As such, no State Code 25 response or referral is required for the site.	While the balance of the Everleigh development impact area is mapped outside of the Koala Priority Area (KPA), Koala Habitat Area (core) is present. However, as the site falls within the GFPDA, the Koala Habitat triggers do not apply. Impacts on Koala Habitat are being managed by an offset under the EPBC Act (refer EPBC 2016/7817).
Fish Habitat Areas *(Fisheries Act 1994)*	**Appendix A - Map 17**: DAMS – Fish Habitat Areas	The *Fisheries Act 1994* deals with the use, conservation and improvement of Queensland's fisheries resources and fish habitats. The legislation deals with the impact from coastal development on marine fish habitat, including protected marine plants and declared fish habitat areas.	The broader site contains multiple mapped waterways for waterway barrier works (WWBW) under the recently revised DAF mapping (refer **Figure 4**). Current *Fisheries Act* 1994 mapping includes one (1) *Moderate risk* which converts into two *Low risk* WWBW which is located adjoining the northern extent of the balance impact area. The feature was included within the ROL6 application area previously approved by

Legislation	Mapping	Purpose	Contemporary Site Relevance
			EDQ (2020/1131). At the time of application which predated the updated SARA mapping, three (3) *Low risk* WWBW features were present. A temporary weir for construction water and the culvert crossing have been installed under the Accepted Development Requirements for WWBW on the *Low risk* WWBW. An approved decision noticed from SARA for waterway barrier works has been granted for this waterway subject to conditions (2501-44085 SDA). One (1) *Low risk* WWBW is located adjacent to the south-eastern extent of the balance impact area within conservation land. The ROL design has been based on the approved NESS and Context Plan outcomes that reviewed waterway values and respective mapping triggers at that time (refer **Section 5**).
Coastal Hazards (*Coastal Protection and Management Act 1995*)	**Appendix A - Map 16**: Coastal Protection	The *Coastal Protection and Management Act 1995* seeks to protect the coastal resources of the coastal zone under State Code 8: Coastal development and tidal works. It establishes a framework for the protection, conservation, rehabilitation and management of the coastal zone with regard to the core objectives of the national strategy for ecologically sustainable development in the use of the Coastal Zone. It also ensures decisions about land use and development safeguard life and property from the threat of coastal hazards.	No areas subject to coastal hazards are mapped within the balance impact site, and the site is not located within a Coastal Management Area.
State Planning Policy 2014 (SPP)	**Appendix A - Map 12**: Matters of State Environmental	Provides interim development assessment requirements which ensures that state interests are considered by local government when assessing development applications where the local government planning scheme does	Portions of the balance impact area are mapped as containing several MSES; regulated vegetation (intersecting a watercourse, category B, essential habitat), wildlife habitat (koala habitat areas – core, endangered or vulnerable).

Legislation	Mapping	Purpose	Contemporary Site Relevance
	Significance (Biodiversity)	not yet integrate the State interests in the SPP. MSES include Biodiversity, Coastal Environment, and Water Quality.	Note, regulated vegetation and State Koala provisions do not apply in a PDA and impacts on Koala habitat are being managed by an offset under the EPBC Act.

3.1. Town Planning Instruments

The site is located within the jurisdiction of LCC but not subject to the provisions of the LCC Planning Scheme. Importantly, the site is located within the GFPDA and as such is governed by EDQ. Although being entirely included within the LCC Local Government Area, EDQ have jurisdiction for the implementation and enforcement of development applications in relation to the project as a key regulator of development within a PDA for the DSDI.

3.1.1 Greater Flagstone Priority Development Area

The development proposal occurs within the Greater Flagstone Urban Development Area, declared under the *Urban Land Development Authority Act 2007* (ULDA Act). This legislation superseded the requirements of local government planning provisions (in this case, LCCs *Logan Planning Scheme 2015*) and selective other state legislation (e.g. *Planning Act 2016*, VMA and others).

The Greater Flagstone Urban Development Area Development Scheme was approved in October 2011 and regulates development within the PDA. The Scheme identifies the site within the Urban Living Zone (refer **Figure 5**). The Urban Living Zone applies to a large portion of the area intended for urban development in the PDA and has been rectified under the endorsed Master Plan (refer **Figure 6**). The majority of the zone is intended to be developed as neighbourhoods focused on identifiable and accessible centres comprising a mix of residential including houses, multiple residential and other residential and live work opportunities through home-based business.

Development applications referred to EDQ for assessment against the *Greater Flagstone UDA Development Scheme* will be assessed against the EDQ's Implementation Guidelines, which occurred at the Context Plan stage. Applicable guidelines specifically include Guideline 14 – Environmental Values and Sustainable Resource Use, and Guideline 17 – Remnant Vegetation and Koala Habitat Obligations in Greater Flagstone and Yarrabilba PDAs. In this case, remnant Endangered vegetation will not be impacted, and Koala offsets have been approved under the Federal EPBC Act, therefore, the provisions of Guideline 17 do not apply.

The masterplan development which includes areas intended for residential allotments with associated road infrastructure is shown in **Appendix E.**

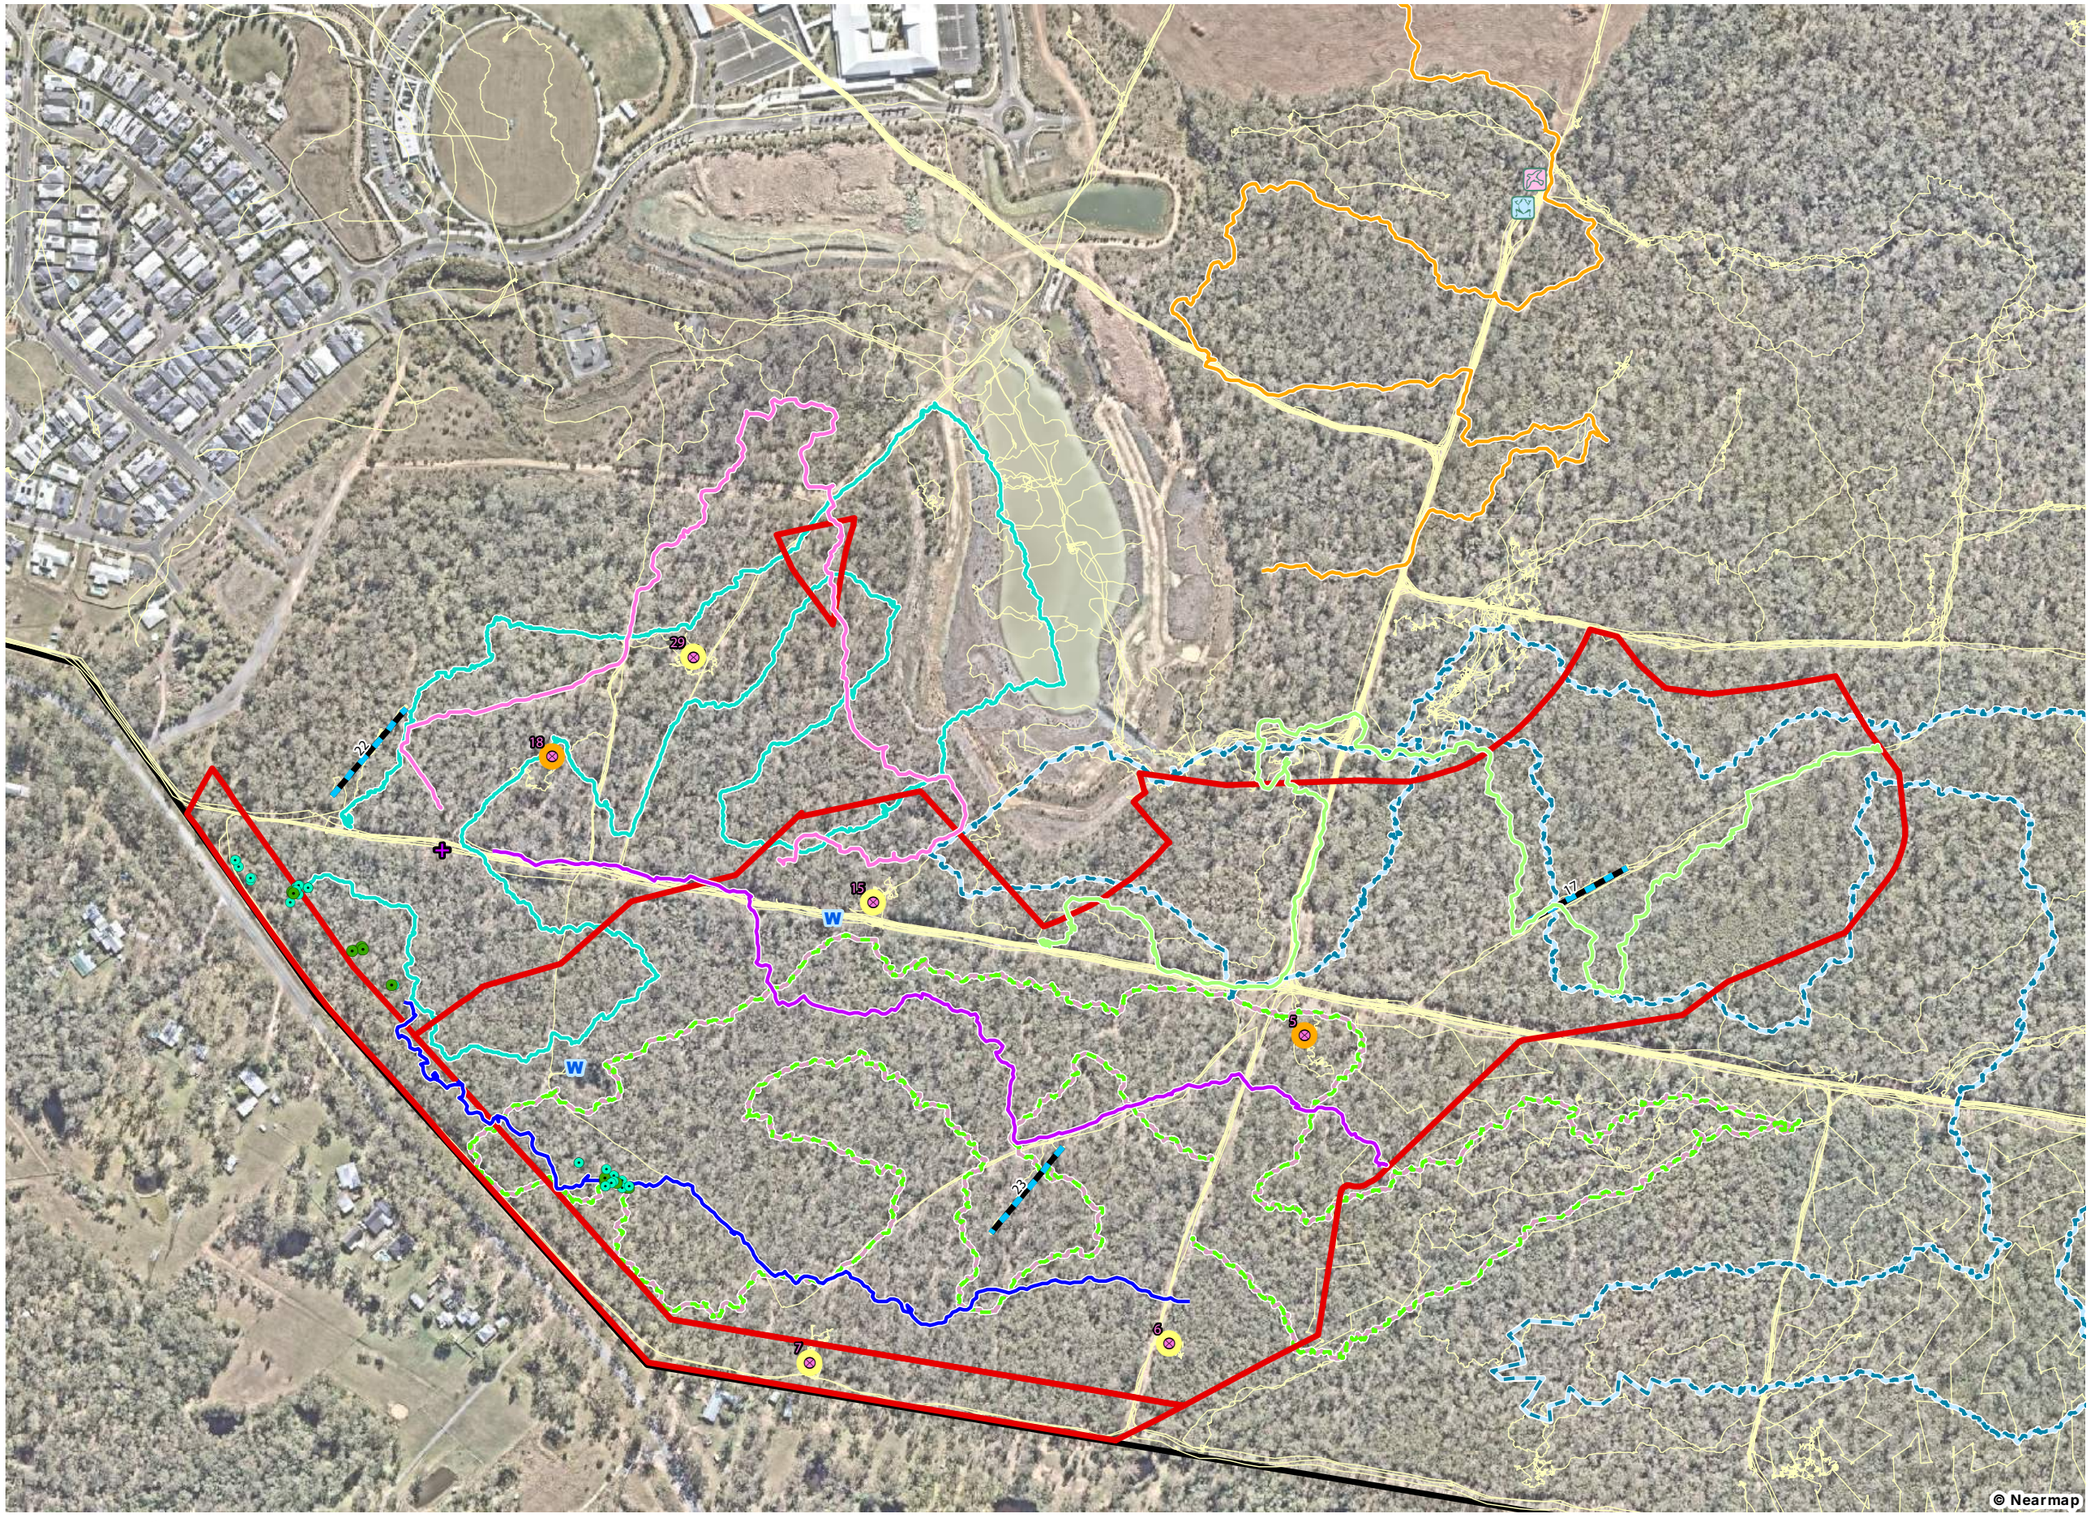
4. Ecological survey results

The study area has undergone a comprehensive assessment of the terrestrial vertebrate fauna and faunal values of the subject land for inclusion within all previous overall ecological assessments for the Everleigh Project (refer **Plan 2**). The broader site assessment has been completed over several years, dating from 2015 to contemporary studies for this report in June 2024 and a full DGPS tree plot for the accompanying VCFMP in July and August 2025. Focal areas were selected within the distinct broad vegetation types as defined by the detailed vegetation assessment and certified Property Map of Assessable Vegetation (PMAV).

Field surveys conducted within the balance impact area include:

- PMAV Transects and Quaternary Sites
- Koala SATs
- Protected Plants Meanders
- Waterway Assessments
- Full DGPS Tree Plot of all trees over 100mm including inherent habitat values

02.FIELD SURVEY EFFORT



Notes:
The information on this plan is not suitable for any purpose other than the expressed use of the Client. Property dimensions, areas, numbers of lots and contours and other physical features may need verification if the development application is approved and development proceeds, and may change when a full survey is undertaken or in order to comply with development approval conditions. No reliance should be placed on the information on this plan for detailed design or for any financial dealings involving the land. Saunders Havill therefore disclaims any liability for any loss or damage whatsoever or howsoever incurred, arising from any party using or relying upon this plan for any purpose other than as a document prepared for the sole purpose of accompanying a development application and which may be subject to alteration beyond the control of Saunders Havill.Unless a development approval states otherwise, this is not an approved plan.

7598 E 02 Balance Field Survey A

4.1. Vegetation Assessment Results

4.1.1 Flora Observations

Field surveys address the relevant desktop analysis conducted at the time of survey. The key findings from the field surveys as well as a current desktop study are as follows:

- The PMST identified eighteen (18) flora species as possibly occurring within 5 km of the site. **No threatened flora species listed under the EPBC Act were recorded within the Balance impact area during field surveys.**
- A Wildlife Online Search listed four (4) protected flora species as possibly occurring within 5 km of the site. Swamp tee-tree (*Melaleuca irbyana*) has been identified across the broader master planned development area, of the six (6) identified locations, two (2) have been previously removed as part of staged clearing, two (2) are located within the eastern conservation area and the remaining two (2) are located within the balance impact area. **No additional threatened flora species listed under the NCA were recorded within the balance impact area during field surveys.**
- The PMST identified eight (8) TECs as having potential to occur within 5 km of the site. In Queensland, the identified TECs are generally associated with the following Regional Ecosystems:
    - Coastal Swamp Oak (Casuarina glauca) Forest of New South Wales and South East Queensland ecological community - RE 12.1.1 and 12.3.20. Not present on or adjoining the impact area.
    - Coastal Swamp Sclerophyll Forest of New South Wales and South East Queensland – RE 12.2.7, 12.3.4/12.3.4a, 12.3.5, 12.3.6 and 12.3.20. While RE 12.3.6 was identified as being present on-site, this mapped was predominately mapped outside of the balance impact area within the conservation area. Not present on or adjoining the impact area.
    - Lowland Rainforest of Subtropical Australia - RE 12.3.1, 12.5.13, 12.8.3, 12.8.4, 12.11.1, 12.11.10, 12.12.1 and 12.12.16. Not present on or adjoining the impact area.
    - Poplar Box Grassy Woodland on Alluvial Plains – RE 11.3.2, 11.3.17, 11.4.7, 11.4.12 and 12.3.10. Not present on or adjoining the impact area.
    - Subtropical eucalypt floodplain forest and woodland of the New South Wales North Coast and South East Queensland bioregions – RE 12.3.2, 12.3.2a, 12.3.3, 12.3.3a, 12.3.3b, 12.3.3d, 12.3.4a,12.3.7, 12.3.7c, 12.3.7d, 12.3.10, 12.3.11, 12.3.11a, 12.3.11b, 12.3.12, 12.3.14a, 12.3.15 and 12.3.19. While RE 12.3.11 was identified as being present on-site, this is mapped outside of the balance impact area within the conservation area and will be avoided.
    - Swamp Tea-tree (Melaleuca irbyana) Forest of South-east Queensland - RE 12.3.18, 12.3.19 and 12.9-10.27 and can also be a component of 12.5.2. Not present on or adjoining the impact area.
    - White Box-Yellow Box-Blakely's Red Gum Grassy Woodland and Derived Native Grassland – RE 11.8.2.a, 11.8.8, 11.9.9a, .13.3.1, 13.11.8, 13.12.9 and can also be a component of 11.3.23, 12.8.16, 13.3.4, 13.11.3 and 13.11.4. Not present on or adjoining the impact area.

- Grey box-grey gum wet forest of subtropical eastern Australia – RE 12.9-10.3 and 12.8.14a. Not present on or adjoining the impact area.

No threatened ecological communities were recorded within the balance impact area during field surveys.

- A total of one-hundred and seventy-eight (178) flora species were recorded through the balance impact area during field surveys. This consisted of one-hundred and fourteen (114) native species and sixty-four (64) introduced / weed species (refer **Table 3** and **Table 4**).

No additional threatened flora species were recorded within the balance impact area during field surveys.

Vegetation characteristics within the site (Eucalypt woodland) were observed to be broadly reflective of Koala, and Grey-headed Flying Fox habitat. Koala and Grey-headed Flying Fox foraging habitat is being offset under the conditions of the EPBC Act approval. Detailed site surveys identified vegetation on-ground to show evidence of historical modification resulting in very few large mature hollow bearing trees which are a key habitat feature for these species.

Native flora identified as dominant included *Acacia disparrima* (Hickory Wattle), *Allocasuarina littoralis* (Black She-oak), *Corymbia citriodora* (Spotted Gum), *Eucalyptus crebra* (Narrow-leaved Ironbark), *Eucalyptus siderophloia* (Grey Ironbark), *Eucalyptus tereticornis* (Forest Red Gum) and *Lophostemon suaveolens* (Swamp Box) (refer **Table 3**). Fourteen (14) of the introduced/weed species recorded on site are listed as restricted matters under the *Biosecurity Act 2014*. Introduced / weed species were recorded largely within the ground and shrub layers within the subject area and included *Lantana camara* (Lantana) and *Sporobolus pyramidalis* (Giant Rats Tail Grass) (refer **Table 4**).

Table 3: Native flora species recorded within the balance impact area

Scientific name	Common name
Acacia concurrens	Black Wattle
Acacia disparrima	Hickory Wattle
Acacia excelsa	Ironwood
Acacia fimbriata	Brisbane Wattle
Acacia leiocalyx	Early Flowering Black Wattle
Acacia maidenii	Maiden's Wattle
Acacia podalyriifolia	Queensland Silver Wattle
Allocasuarina excelcia	Drooping She-oak
Allocasuarina littoralis	Black She-oak
Alphitonia excelsa	Soap Tree
Alternanthera denticulata	Lesser Joyweed
Angophora leiocarpa	Smooth-barked Apple

Scientific name	Common name
Angophora woodsiana	Rough Barked Apple
Aristida purpurea	Threeawn aristida
Azolla pinnata	Azolla Fern
Baumea articulata	Jointed Twigrush
Brachychiton populneus	Kurrajong
Breynia oblongifolia	Coffee Bush
Brunoniella australis	Blue Trumpet
Bursaria spinosa	Black Thorn
Cassytha glabella	Devil's Twine
Casuarina cunninghamiana	River She-oak
Centella asiatica	Pennywort
Cheilanthes distans	Bristle Cloak Fern
Chrysocephalum apiculatum	Yellow Buttons
Commelina diffusa	Wandering Jew
Corymbia citriodora	Spotted Gum
Corymbia intermedia	Pink Bloodwood
Corymbia tessellaris	Moreton Bay Ash
Corymbia trachyphloia	Brown Bloodwood
Cymbopogon refractus	Barbed Wire Grass
Cynodon dactylon	Green Couch
Cyperus difformis	Dirty Dora
Desmodium varians	Slender Tick Trefoil
Dianella caerulea	Blueberry Lilly
Dianella revoluta	Blue Flax Lily
Dichondra repens	Kidney Weed
Entolasia stricta	Wiry Panic
Eragrostis brownii	Brown's Love Grass
Eremophila deblis	Winter Apple
Eucalyptus crebra	Narrow-leaved Ironbark
Eucalyptus seeana	Narrow-leaved Red Gum
Eucalyptus siderophloia	Grey Ironbark
Eucalyptus tereticornis	Forest Red Gum
Eustrephus latifolius	Wombat Berry
Ficinia nodosa	Club Rush
Ficus coronata	Sand Paper Fig
Fimbristylis nutans	Fringe Rush
Gahnia aspera	Sword Sedge

Scientific name	Common name
Gahnia asperia	Saw Sedge
Geitonoplesium cymosum	Scrambling Lilly
Geodorum densiflorum	Pink Nodding Orchid
Glochidion ferdinandi	Cheese Tree
Glochidion sumatranum	Large-leaved Cheese Tree
Glossocardia bidens	Native Cobbler's Pegs
Glycine tabacina	Variable Glycine
Goodenia rotundifolia	Star Goodenia
Grevillea robusta	Silky Oak
Hardenbergia violacea	Native Sarsparilla
Hibbertia aspera	Trailing Guinea Flower
Hibbertia vestita	
Hybanthus stellarioides	Spade Flower
Hydrocotyle tripartita	Small-leaved Pennywort
Hypoxis pratensis	Hypoxis
Imperata cylindrica	Blady Grass
Jacksonia scoparia	Dogwood
Juncus usitatus	Common Rush
Lepidosperma laterale	Variable Sword Sedge
Lepironia articulata	Grey Rush
Leptospermum petersonii	Lemon-scented Tea-tree
Leucopogon trichostylus	Lecopogon
Lobelia purpurescens	White Root
Lobelia stenophylla	Lobelia
lomandra longifolia	Long-leaved Matrush
Lomandra longifolia	Mat Rush
Lomandra multiflora	Many-flowered Mat Rush
Lophostemon confertus	Brush Box
Lophostemon suaveolens	Swamp Box
Lophostemon suaveolens	Swamp Box
Ludwigia peploides	Water Primrose
Melaleuca linariifolia	Snow In Summer
Melaleuca quinquenervia	Broad-leaved Paperbark
Melaleuca saligna	White Bottlebrush
Melaleuca saligna	Willow Bottlebrush
Melaleuca viminalis	Weeping Bottlebrush
Mitrasacme alsinoides	Swamp Mitrewort

Scientific name	Common name
Murdannia graminea	Slug Herb
Nymphaea caerulea	Blue Water Lilly
Nymphoides indica	Water Snowflakes
Oldenlandia galioides	Oldenlandia
Ottochloa gracillima	Graceville Grass
Ozothamnus diosmifolius	Sago Flower
Panicum decompositum	Native Millet
Parsonsia straminea	Monkey Rope Vine
Patersonia glabrata	Native Iris
Persicaria decipiens	Slender knotweed
Petalostigma pubescens	Quinine Bush
Philydrum lanuginosum	Woolly Frogmouth
Philydrum lanuginosum	Woolly Waterlily
Phyllanthus virgatus	Phyllanthus
Pimelea linifolia	Rice Flower
Plectranthus parviflorus	Plectranthus
Poa labillardieri	Tussock Grass
Pomax umbellata	Pomax
Pteridium esculentum	Bracken
Pultenaea juniperina	Prickly Beauty
Smilax australis	Barbed-wire Vine
Themeda triandra	Kangaroo Grass
Thysonatus tuberosus	Fringe Lily
Trema tomentosa	Poinson Peach
Typha latifolia	Cumbungi
Typha orientalis	Bulrush
Wahlenbergia gracilis	Small-flowered Bluebell
Xanthorrhoea latifolia	Grass Tree
Nymphoides indica	Water Snowflakes

Table 4: Introduced / weed flora species recorded within the balance impact area

Scientific Name	Common Name	Weed Restriction *Biosecurity Act 2014*
Ageratum houstonianum	Blue Billygoat Weed	
Alternanthera brasiliana	Purple Joyweed	
Ambrosia artemisiifolia	Annual Ragweed	Category 3 - Restricted
Andropogon virginicus	Whisky Grass	

Scientific Name	Common Name	Weed Restriction *Biosecurity Act 2014*
Asparagus aethiopicus	Ground Asparagus Weed	Category 3 - Restricted
Asparagus africanus	Climbing Asparagus Fern	Category 3 - Restricted
Baccharis halimifolia	Groundsel Bush	Category 3 - Restricted
Bidens pilosa	Cobbler's Pegs	
Bougainvillea glabra	Bougainvillea	
Bryophyllum delagoense	Mother Of Millions	Category 3 - Restricted
Celtis sinensis	Chinese Celtis	Category 3 - Restricted
Chloris gayana	Rhodes Grass	
Chloris virgata	Feathertop Rhodes Grass	
Cinnamomum camphora	Camphor Laurel	Category 3 - Restricted
Cirsium vulgare	Spear Thistle	
Conyza bonariensis	Flaxleaf Fleabane	
Corymbia torelliana	Cadaghi	
Crassocephalum crepidioides	Thickhead	
Crotalaria lanceolata	Lance-leaved Rattlepod	
Cyperus polystachyos	Bunchy sedge	
Drosera brevifolia	Sundew	
Dyschoriste depressa	Butterfly Heaven	
Emilia sonchifolia	Emilia	
Eragrostis curvula	African Lovegrass	
Gomphocarpus physocarpus	Balloon Cotton Bush	
Gomphrena celosioides	Gomphrena Weed	
Heliotropium amplexicaule	Blue Heliotrope	
Heteropogon contortus	Black-spear Grass	
Hypochaeris radicata	Flatweed	
Jacaranda mimosifolia	Jacaranda	
Lantana camara	Lantana	Category 3 - Restricted
Lantana montevidensis	Creeping Lantana	Category 3 - Restricted
Leucaena leucocephala	Leucaena	
Macroptilium atropurpureum	Siratro	
Macroptilium lathyroides	Phasey Bean	
Megathyrsus maximus	Guinea Grass	
Melinis minutiflora	Molasses Grass	
Melinis repens	Red Natal Grass	
Neonotonia wightii	Glycine	
Ochna serrulata	Ochna	

Scientific Name	Common Name	Weed Restriction *Biosecurity Act 2014*
Opuntia tomentosa	Velvet Tree Pear	Category 3 - Restricted
Opuntia tomentosa	Prickly Pear	
Paspalum dilatatum	Paspalum	
Passiflora suberosa	Corky Passion Vine	
Phyllanthrus multiflorus	Waterfall Plant	
Phyllanthuis virgatus	Creeping Phyllanthus	
Pinus radiata	Slash Pine	
Schefflera actinophylla	Umbrella Tree	
Schinus terebinthifolius	Broadleaved Pepper Tree	Category 3 - Restricted
Selenicereus undatus	Dragon Fuit	
Senecio madagascariensis	Fireweed	Category 3 - Restricted
Senna pendula	Easter Cassia	
Sida cordifolia	Flannel Weed	
Solanum hispidum	Giant Devil's Fig	
Solanum mauritianum	Wild Tobacco Tree	
Solanum nigrum	Blackberry Nightshade	
Solanum seaforthianum	Brazilian Nightshade	
Sporobolus africanus	Parramatta Grass	
Sporobolus pyramidalis	Giant Rats Tail Grass	Category 3 - Restricted
Tecoma stans	Yellow Bells	Category 3 - Restricted
Urochloa decumbens	Signal Grass	
Velleia spathulata	Wild Pansies	
Verbena bonariensis	Purple-top Verbena	
Yucca aloifolia	Yucca	

4.1.2 Regional Ecosystem Observations

State Regional Ecosystem (RE) mapping indicates the site as containing predominately Category X (non-remnant) vegetation and Category B (remnant) composite 'of concern' RE12.9-10.2/12.9-10.7. The Balance Impact area has been subject to multiple ecological assessments, including a PMAV assessment (2019/002658) that maps the areas a described above (refer **Table 5**).

Table 5: Regional Ecosystem Description

Regional Ecosystem	VMA Status	Description
RE12.9-10.2	Least Concern	*Corymbia citriodora subsp. variegata open forest or woodland usually with Eucalyptus crebra. Other species such as Eucalyptus tereticornis, E. moluccana, E. acmenoides and E. siderophloia may be present in scattered patches or in low densities. Understorey can be grassy or shrubby. Shrubby*

		understorey of Lophostemon confertus (whipstick form) often present in northern parts of bioregion. Occurs on Cainozoic and Mesozoic sediments. Not a Wetland.
RE12.9-10.7	Of concern	*Eucalyptus crebra +/- E. tereticornis, Corymbia tessellaris, Angophora leiocarpa, E. melanophloia woodland. Occurs on Cainozoic and Mesozoic sediments. Not a Wetland.* *Vegetation communities in this regional ecosystem include: 12.9-10.7a: Eucalyptus siderophloia, Corymbia intermedia +/- E. tereticornis and Lophostemon confertus open forest. Occurs on Cainozoic and Mesozoic sediments in near coastal areas. Not a Wetland.*

During field surveys a DGPS tree plot of the Balance Impact area and a buffer was conducted. The vegetation was found to be dominated by *Eucalyptus siderophloia* (Grey Ironbark), *Eucalyptus tereticornis* (Forest Red Gum) and *Eucalyptus citriodora* (Spotted Gum), which is consistent with 'of concern' RE 12.9-10.7a within the mapped Category B (remnant) areas (refer **Photo set 1**). The sub-canopy layer contained species typical of the 9-10 landzone, sedimentary rocks, and included *Acacia leiocalyx* (Early Flowering Black Wattle) and *Allocasuarina littoralis* (Black She-oak) regrowth with scattered *Lophostemon suaveolens* (Swamp Box) and *Alphitonia excelsa* (Soap Tree).

The vegetation within the mapped Category X (non-remnant) areas was found to be dominated by *Eucalyptus siderophloia* (Grey Ironbark), *Eucalyptus tereticornis* (Forest Red Gum) and *Eucalyptus citriodora* (Spotted Gum) (refer **Photo set 2).** Areas of native vegetation regrowth are present throughout the mapped Category X (non-remnant) areas. Areas of this vegetation was found to be dominated by *Allocasuarina littoralis* (Black She-oak) and *Acacia* regrowth, with die-back and thinning evident throughout. Disturbance from weed species was observed throughout areas of the remnant and non-remnant vegetation alike. Areas of understorey were observed to lack native vegetation, instead containing patches of *Lantana camara* (Lantana) infestation varying in density.

Photo set 1: Mapped Category B (remnant) RE 12.9-10.7a vegetation characterises

Photo set 2: Non-remnant vegetation characterises

4.1.3 GPS Tree Plot Survey

A GPS Tree Plot Survey was conducted of the balance impact area locating and identifying all NJKHT's with a DBH ≥100 mm and all other trees with a DBH ≥200 mm (measured at 1.4 m above ground). Trees meeting these criteria were located within and proximal to the proposed development. Data from the GPS Tree Plot Survey has been extracted and summarised below. Refer to **Plan 3** for the Tree Plot and **Appendix F** for the Tree Schedule.

- The GPS Tree Plot Survey recorded thirty-two (32) native tree species. **Table 6** provides a summary of the results of the GPS Tree Plot Survey completed within the balance impact area. A total of 11,086 trees including dead stags were recorded within the survey area.
- The dominant species across the subject site was *Lophostemon suaveolens* (Swamp Box) with 3061 individuals were recorded (27.61%), followed by *Corymbia citriodora* (Spotted Gum) with 2287 individuals recorded (20.63%) and *Eucalyptus crebra* (Narrow-leaved Ironbark) where 1230 individuals were recorded (11.1%).
- **Table 7** provides a summary of the DBH recorded trees of the Tree Plot Survey and shows that 81.38% of trees recorded had a DBH of 300 mm or less, and 98.29% of the trees had a DBH of 500 mm or less. Less than one percent (0.61%) of trees recorded had a DBH of 600 mm or above. This indicates that while a few scattered large trees are present, the vast majority of the vegetation is immature. This is reflective of the vegetation mapping (refer below).

Table 6: Tree Plot Summary

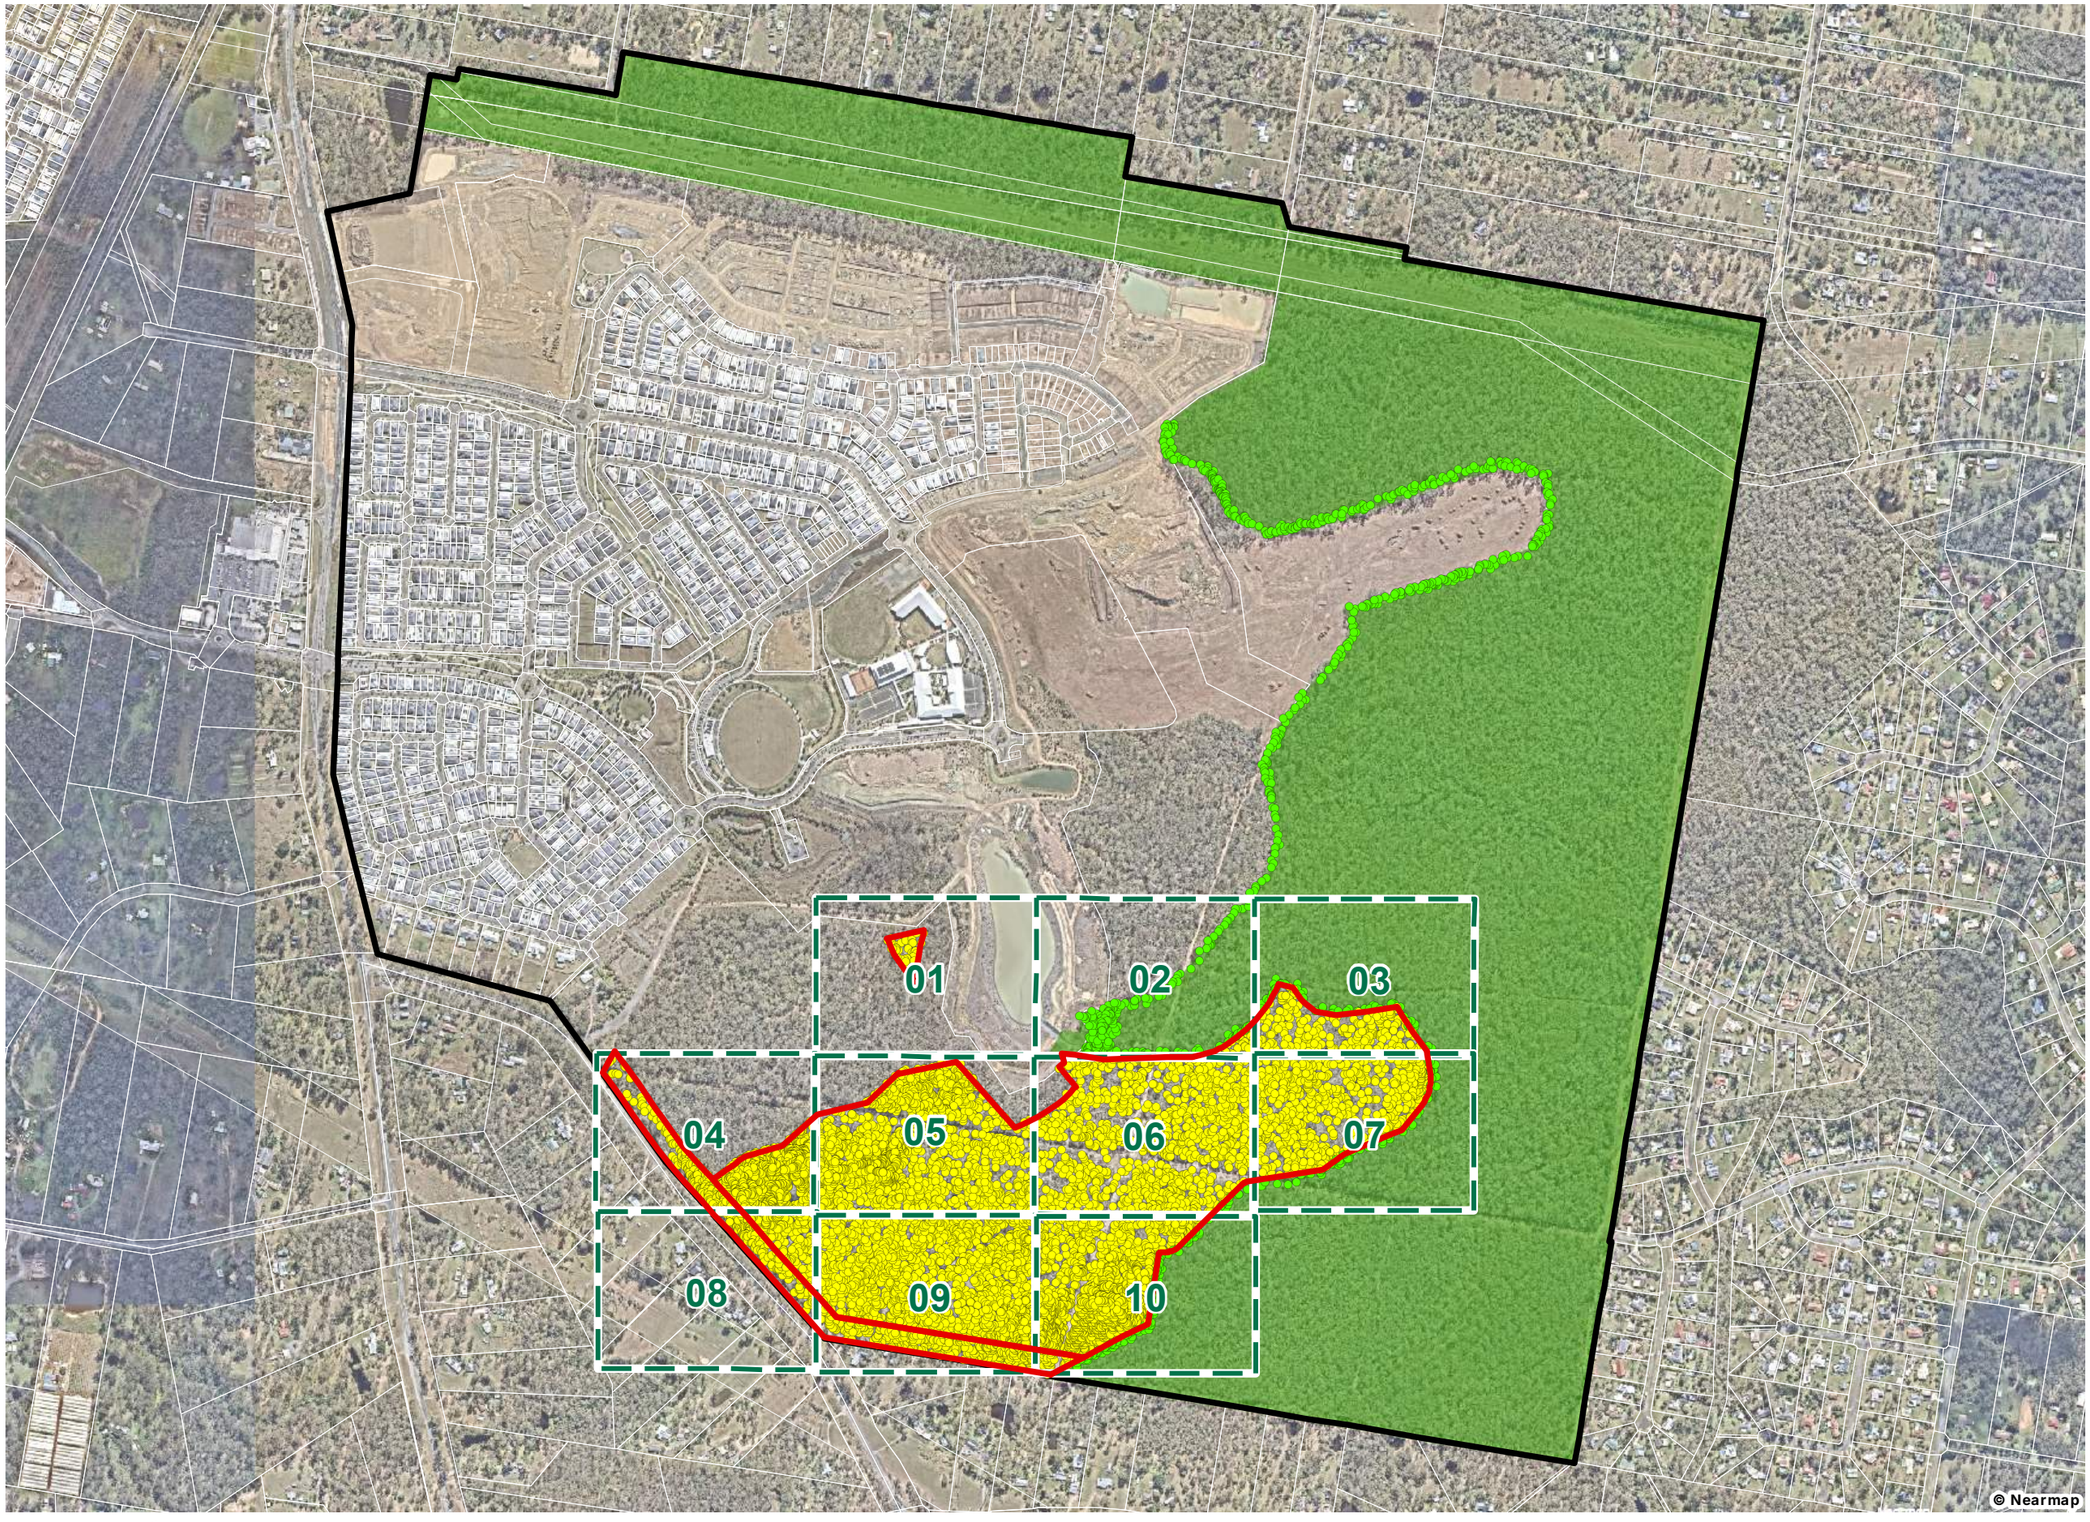
Scientific name	Common name	Number recorded	Percentage recorded (%)
Lophostemon suaveolens	Swamp Box	3061	27.61
Corymbia citriodora	Spotted Gum	2287	20.63
Eucalyptus crebra	Narrow-leaved Ironbark	1230	11.10
Corymbia intermedia	Pink Bloodwood	1119	10.09
Eucalyptus tereticornis	Forest Red Gum	829	7.48

Scientific name	Common name	Number recorded	Percentage recorded (%)
Allocasuarina littoralis	Black She-oak	618	5.57
Melaleuca quinquenervia	Broad-leaved Paperbark	546	4.93
Angophora leiocarpa	Smooth-barked Apple	402	3.63
Eucalyptus seeana	Narrow-leaved Red Gum	300	2.71
Eucalyptus siderophloia	Grey Ironbark	130	1.17
Corymbia tessellaris	Moreton Bay Ash	113	1.02
Eucalyptus moluccana	Gum-topped Box	93	0.84
Acacia concurrens	Black Wattle	65	0.59
Alphitonia excelsa	Soap Tree	65	0.59
DEAD/STAG	-	61	0.55
Acacia leiocalyx	Early Flowering Black Wattle	38	0.34
Acacia disparrima	Hickory Wattle	27	0.24
Eucalyptus propinqua	Small-fruited Grey Gum	18	0.16
Petalostigma pubescens	Quinine Bush	18	0.16
Allocasuarina tortulosa	Forest She-oak	13	0.12
Melaleuca irbyana	Swamp Tea-tree	13	0.12
Eucalyptus major	Grey Gum	12	0.11
Melaleuca linariifolia	Snow In Summer	7	0.06
Angophora subvelutina	Broad-leaved Apple	6	0.05
Eucalyptus acmenoides	White Mahogany	5	0.05
Corymbia trachyphloia	Brown Bloodwood	2	0.02
Melaleuca viminalis	Weeping Bottlebrush	2	0.02
Allocasuarina luehmannii	Bull Oak	1	0.01
Eucalyptus coolabah	Coolabah	1	0.01
Eucalyptus racemosa	Scribbly Gum	1	0.01
Lophostemon confertus	Brush Box	1	0.01
Melaleuca nodosa	Prickly-leaved Paperbark	1	0.01
Melaleuca saligna	White Bottlebrush	1	0.01
Total		**11086**	**100**

Table 7: Tree Plot DBH Summary

Total DBH (mm)	Number recorded	Percentage recorded (%)
0-100	9	0.08
100-200	5197	46.88
200-300	3816	34.42
300-400	1426	12.86
400-500	448	4.04
500-600	122	1.10
600-700	41	0.37
700-800	21	0.19
Total	**11086**	**100**

03.00 TREE PLOT – BALANCE



Notes:
The information on this plan is not suitable for any purpose other than the expressed use of the Client. Property dimensions, areas, numbers of lots and contours and other physical features may need verification if the development application is approved and development proceeds, and may change when a full survey is undertaken or in order to comply with development approval conditions. No reliance should be placed on the information on this plan for detailed design or for any financial dealings involving the land. Saunders Havill therefore disclaims any liability for any loss or damage whatsoever or howsoever incurred, arising from any party using or relying upon this plan for any purpose other than as a document prepared for the sole purpose of accompanying a development application and which may be subject to alteration beyond the control of Saunders Havill. Unless a development approval states otherwise, this is not an approved plan.

Property dimensions, areas, numbers of lots and contours and other physical features may need verification if the development application is approved and development proceeds, and may change when a full survey is undertaken or in order to comply with development approval conditions. No reliance should be placed on the information on this plan for detailed design or for any financial dealings involving the land. Saunders Havill therefore disclaims any liability for any loss or damage whatsoever or howsoever incurred, arising from any party using or relying upon this plan for any purpose other than as a document prepared for the sole purpose of accompanying a development application and which may be subject to alteration beyond the control of Saunders Havill. Unless a development approval states otherwise, this is not an approved plan.

7598 E 3 10 Balance TP B

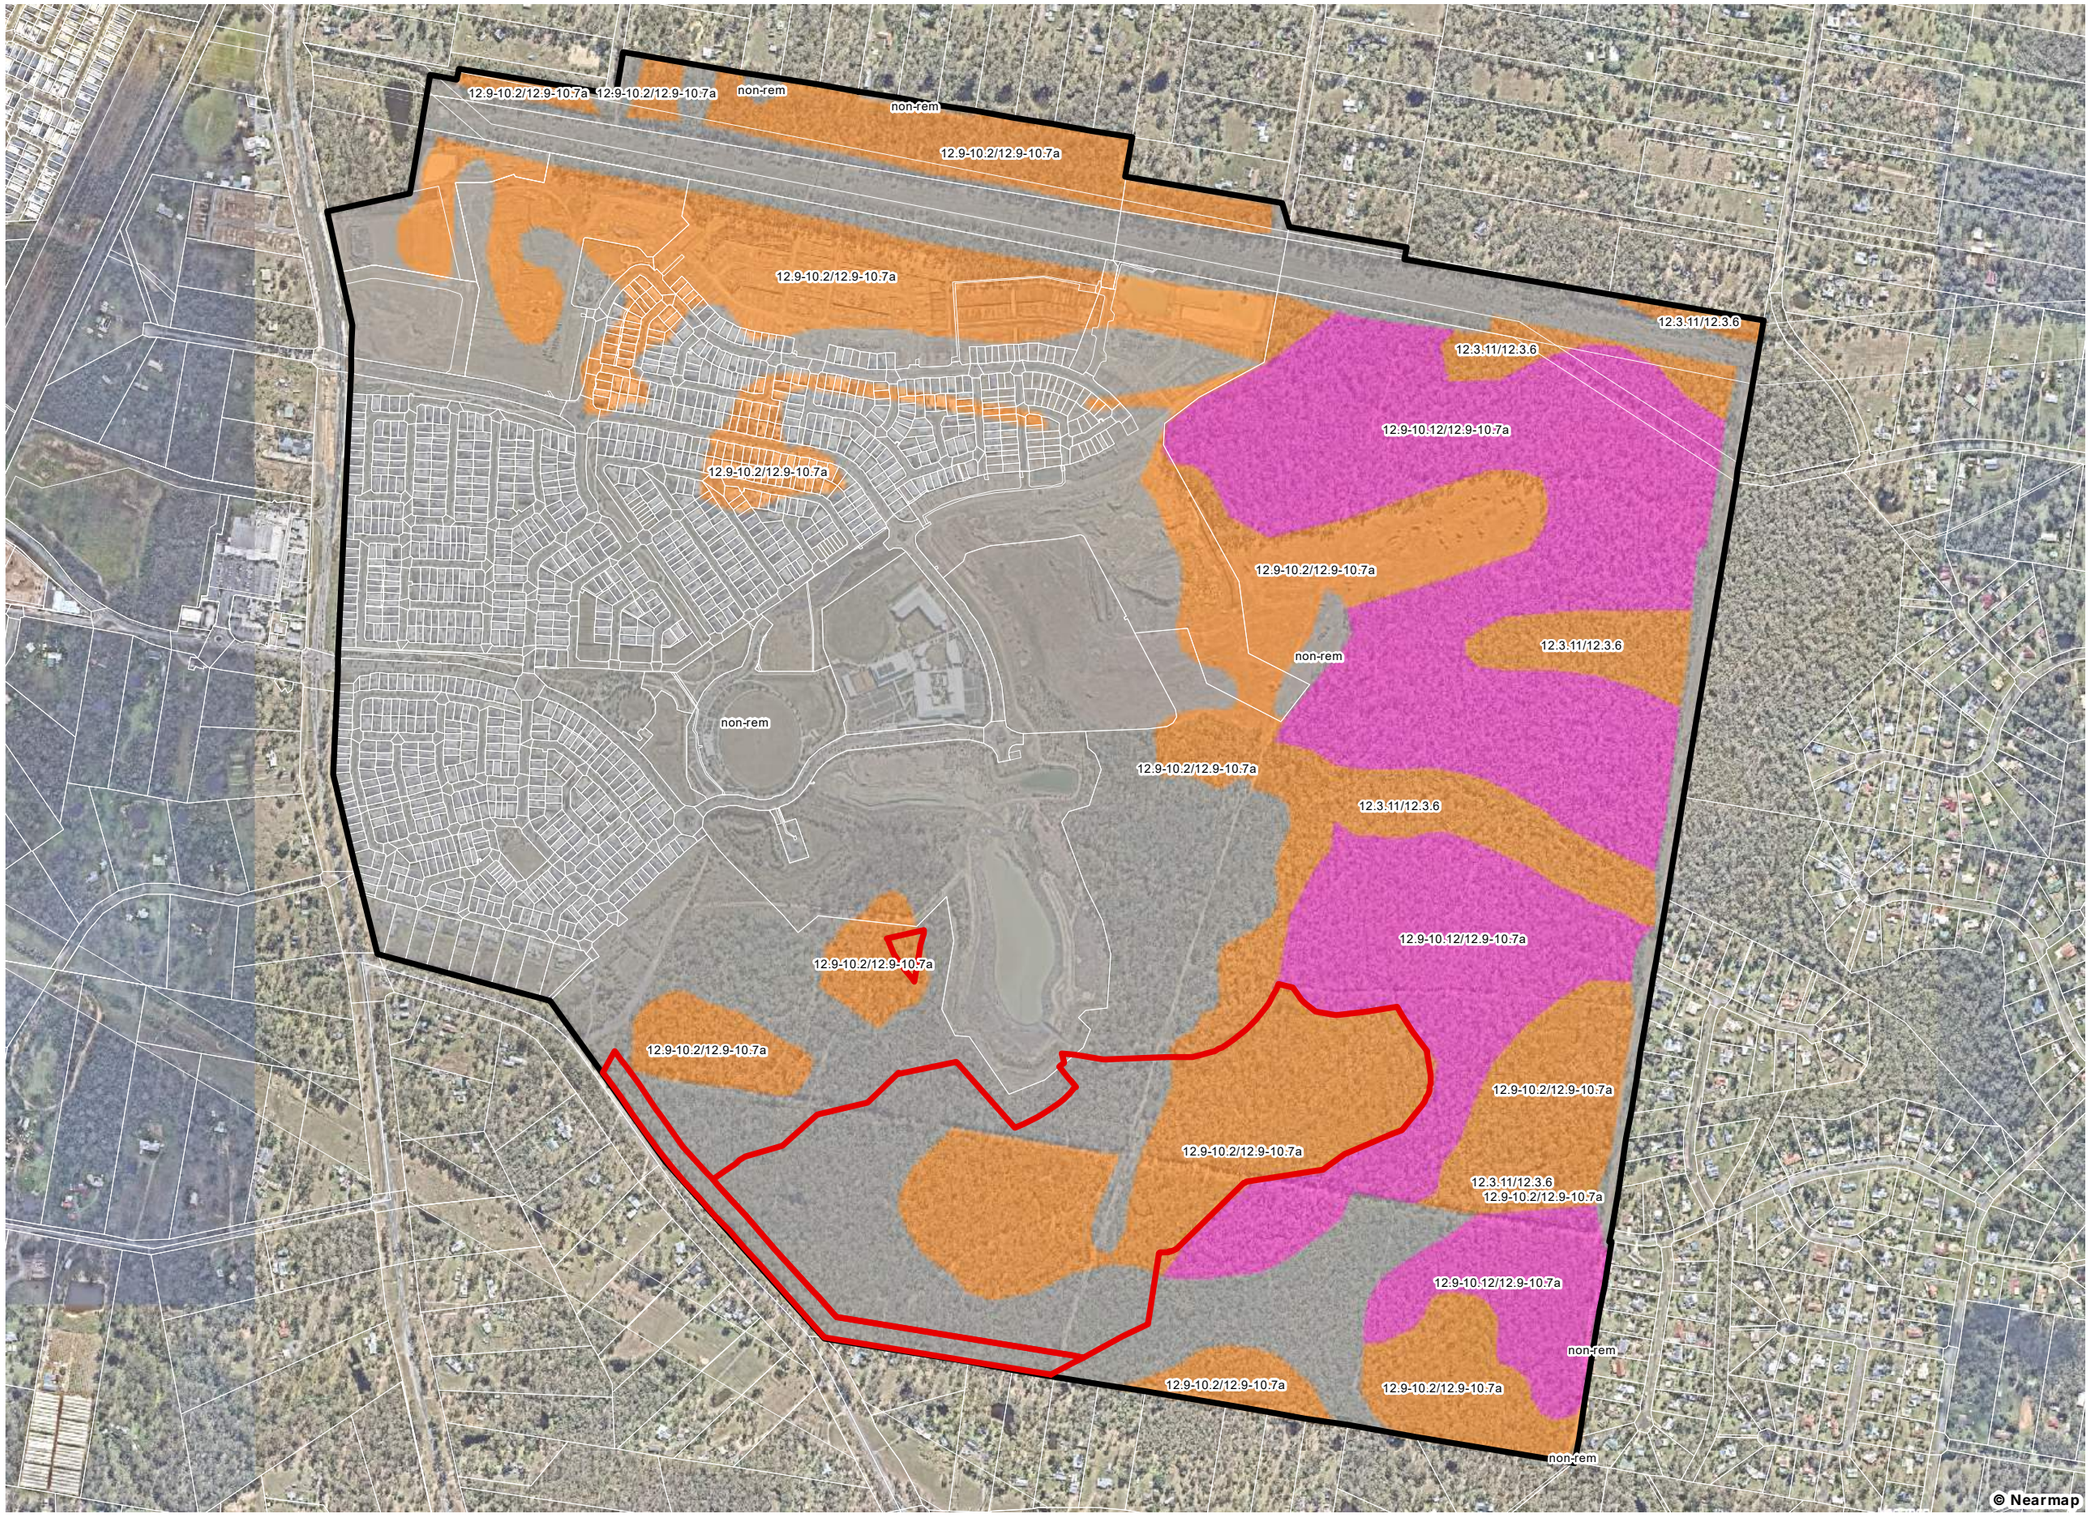
4.1.4 Habitat Assessment and Vegetation Communities

The following section discusses the results of the field verification surveys of vegetation communities within the balance impact area. On-ground vegetation characteristics were utilised to delineate vegetation communities. Field surveys identified two (2) vegetation communities within the balance area including,

- Eucalypt dominant vegetation – non-remnant
- Eucalypt dominant vegetation – remnant

The site was subject to a PMAV assessment throughout the property resulting with the on-ground vegetation values being mapped. While no changes to the extent of mapped remnant areas were proposed throughout the site, the only change was to the status of remnant areas. The site is mapped as both Category X (non-remnant) and Category B (remnant) vegetation with composite 'Of Concern' RE12.9-10.2/12.9-10.7a mapped within the remnant vegetation. The delineation of the two vegetation communities is presented on **Plan 4.**

04.CERTIFIED PMAV - BALANCE



Notes:
The information on this plan is not suitable for any purpose other than the expressed use of the Client. Property dimensions, areas, numbers of lots and contours and other physical features may need verification if the development application is approved and development proceeds, and may change when a full survey is undertaken or in order to comply with development approval conditions. No reliance should be placed on the information on this plan for detailed design or for any financial dealings involving the land. Saunders Havill therefore disclaims any liability for any loss or damage whatsoever or howsoever incurred, arising from any party using or relying upon this plan for any purpose other than as a document prepared for the sole purpose of accompanying a development application and which may be subject to alteration beyond the control of Saunders Havill. Unless a development approval states otherwise, this is not an approved plan.

4.2. Fauna Assessment Results

4.2.1 Fauna Observations

Field surveys address the relevant desktop analysis conducted at the time of survey. The key findings from the field surveys as well as a current desktop study are as follows:

- The PMST identified twenty-one (21) fauna species as possibly occurring on site.
- A Wildlife Online Search listed six (6) protected fauna species as possibly occurring on-site, including *Phascolarctos cinereus* (Koala), *Adelotus brevis* (Tusked Frog), *Dasyurus maculatus maculatus* (Spotted-tail Quoll (southern subspecies)), *Ninox strenua* (Powerful Owl), *Petauroides volans volans* (Southern Greater Glider), and *Tachyglossus aculeatus* (Short-beaked Echidna).
- Koala (*Phascolarctos cinereus*) and Grey-headed Flying Fox (*Pteropus poliocephalus*) sightings have been recorded across the wider development area. **No additional threatened fauna species listed under the EPBC Act nor the NCA have been recorded within the balance impact area.**
- Field surveys observed twenty-two (22) fauna species throughout the balance impact area. All those identified were common and highly urbanised fauna and avifauna typical of highly modified environments (refer **Table 88**).

Table 8: Recorded Fauna Species

Scientific name	Common name
Birds	
Anas superciliosa	Pacific Black Duck
Cacatua galerita	Sulphur-crested Cockatoo
Centropus phasianinus	Pheasant Coucal
Coracina novaehollandiae	Black-faced Cuckoo-shrike
Corvus orru	Torresian Crow
Cracticus nigrogularis	Pied Butcherbird
Dacelo novaeguineae	Laughing Kookaburra
Entomyzon cyanotis	Blue-faced Honeyeater
Gymnorhina tibicen	Australian Magpie
Hirundo neoxena	Welcome Swallow
Macropygia amboinensis	Brown Cuckoo-Dove
Manorina melanocephala	Noisy Miner
Oriolus sagittatus	Olive-backed Oriole
Pardalotus striatus	Striated Pardalote
Philemon corniculatus	Noisy Friarbird
Platycerus adscitus	Pale-headed Rosella
Rhipidura leucophrys	Willie Wagtail
Mammals	

Scientific name	Common name
Lepus europaeus	Hare
Macropus gigantus	Eastern Grey Kangaroo
Macropus rufogriseus	Red-necked Wallaby
Reptiles	
Lampropholis delicata	Grass Skink
Amphibian	
Rhinella marina	Cane Toad

4.2.2 Threats and Barriers to Fauna Movement

The balance impact area is located within the south-eastern corner of the Everleigh site, given this safe fauna movement to the south-west is somewhat restricted by Greenbank Road and north-west by the Everleigh residential development. East of the balance impact area is the to be retained conservation corridor associated with the development, where safe fauna movement into this area will be prioritised. More broadly, surrounding this conservation area, fauna movement east is possible through the north-eastern adjoining Wearing Park. Already established residential developments are present to the south-east of this conservation area as well as large lot residential to the north and south-east, restricting movement.

4.2.3 Threatened Fauna Assessment

The EPBC protected matters search identified twenty-one (21) threatened fauna species as potentially occurring within the vicinity of the site. The Nature Conservation (Animals) Regulation 2020 (NCAR) lists six (6) threatened fauna species as possibly occurring within five (5) kilometres of the application site.

Two (2) fauna species listed as threated under the EPBC Act and/or NCA were directly observed on-site, these include *Phascolarctos cinereus* (Koala) and *Pteropus poliocephalus* (Grey-headed Flying Fox). Potential for additional threatened species to occur is discussed in detail below.

Glossy Black Cockatoo (*Calyptorhynchus lathami lathami*)

The Glossy Black Cockatoo relies on two specific habitat types for foraging and breeding. Foraging habitat is defined as vegetation containing *Casuarina* or *Allocasuarina* species. In South-east Queensland these are usually *Allocasuarina littoralis* (Black She-oak) and *Allocasuarina tortulosa* (Forest She-oak). The species is known to be highly selective of feed tree species as well as preference for individual trees and the size, weight and number of cones a tree produces, and due to these traits a large stand of trees is desirable for foraging. Breeding habitat is understood to be equally selective with a preference for specific hollow characteristics, notably a minimum entrance diameter >15cm.

A GPS tree plot of boundary vegetation including mature trees (>100 mm DBH) was conducted as part of field surveys. A proportion of the vegetation surveyed was *Allocasuarina littoralis* (Black She-oak) trees. All trees were concurrently examined for signs of fauna activity, including scats and scratches and/or habitat values. Within the boundary vegetation a total of one (1) small and one (1) large hollow were recorded within one alive and one dead/stag tree. These features were recorded during the tree plot surveys as containing

potentially suitable hollows for breeding within the boundary vegetation of the Balance Impact area and immediate surrounds.

Areas of the site do contain relatively intact eucalypt woodland which is dominated by *Eucalyptus siderophloia* (Grey Ironbark), *Eucalyptus tereticornis* (Forest Red Gum) and *Eucalyptus citriodora* (Spotted Gum). These species are consistent with 'of concern' RE 12.9-10.7a. The sub-canopy layer contained species typical of the 9-10 landzone, sedimentary rocks, and included *Acacia leiocalyx* (Early Flowering Black Wattle) and *Allocasuarina littoralis* (Black She-oak) regrowth with scattered *Lophostemon suaveolens* (Swamp Box) and *Alphitonia excelsa* (Soap Tree) (refer **Photo set 1** and **Photo set 2**). Disturbance from weed species was observed throughout areas of the remnant and non-remnant vegetation alike. Areas of understorey were observed to lack native vegetation, instead containing patches of *Lantana camara* (Lantana) infestation.

Glossy Black-cockatoo are highly selective of individual food trees and require a presence of feed trees. While the presence of *Allocasuarina* species has been confirmed within the Balance Impact Area site, the overall small area of the footprint makes it unlikely to provide adequate foraging habitat for the species. While multiple observations of the species within 5 km of the impact site have been recorded on the Atlas of Living Australia (ALA) website, only three (3) of these have been within the last ten years to the east of the site and no sightings have been recorded within the impact site. Glossy Black-cockatoo is known to occur within White Rock Conservation Park where the ample availability of large areas for foraging habitat is present suggesting the reason why records of the species are lacking form the development area is the lack of available habitat.

The vegetation throughout the Balance Impact Area is considered to lack significant foraging and breeding habitat for this species. It is considered highly unlikely Glossy Black Cockatoo would utilise this vegetation.

No sightings of Glossy Black Cockatoo were recorded within the site during the survey period.

Greater Glider (*Petauroides volans*)

The Greater Glider is restricted to eucalypt forests and woodlands of eastern Australia. It is typically found in highest abundance in taller, montane, moist eucalypt forests on fertile soils, with relatively old trees and abundant hollows associated with Category B (remnant) vegetation. While the site does contain mapped Category B (remnant) vegetation of eucalypt dominated communities it lacks the mature habitat trees required to support Greater Glider.

A GPS tree plot of boundary vegetation including mature trees (>100 mm DBH) was conducted as part of field surveys. All trees were concurrently examined for signs of fauna activity, including scats and scratches and/or habitat values. Within the boundary vegetation a total of one (1) small and one (1) large hollow were recorded within one alive and one dead/stag tree. These features were recorded during the tree plot surveys as containing potentially suitable hollows for breeding within the boundary vegetation of the Balance Impact area and immediate surrounds. Targeted spotlighting surveys failed to locate the species on-site

As stated in the Conservation Advice for *Petauroides volans* (Greater Glider (southern and central)) 2022, the species is particularly sensitive to disturbance associated with forest clearance and fragmentation and individuals disperse poorly. The site is located in a landscape that is currently under construction has been

subject to modification for development resulting in a mixture of undisturbed and highly disturbed environments. The site lacks suitable habitat for the species and is located adjacent to highly modified areas.

Six (6) occurrence records of Greater Glider sightings have been recorded on the ALA database within 5 km of the site, of which two (2) the date of the sighting was not specified, one (1) was in 1994, and three (3) were between 2017 and 2023. Please note the six (6) sightings within 5 km of the Everleigh site exclude data points with location uncertainty, absence records, unverified records, duplicate records and unresolved user annotations. All recent sightings (2017 – present) are associated with vegetation located within the Greenbank Training Area that contains much more mature vegetation than the surrounding landscape. No sightings of the species have been recorded within the development site. Considering all of the above and the scale of development and clearing that has already occurred on the project area adjoining the Balance Impact Area it is considered unlikely Greater Glider utilise the site.

No observations of Greater Glider were recorded within the site during the field surveys.

5. Natural Environment Site Strategy

The NESS was prepared for Mirvac by SHG in 2017 in accordance with PDA Guidelines 14 and 17 and relied upon detailed ecological surveys and assessments. The NESS was endorsed by EDQ upon approval of the MCU. The areas containing applicable biodiversity values relevant to the balance impact area are illustrated in **Plan 5**.

5.1. Criteria

The NESS criteria are assessed further below for the balance impact area application:

- **Survey, Identification, Reporting and Management** – a significant biodiversity assessment is required to be developed for each development stage that potentially impacts on identified significant biodiversity values. Field surveys (contemporary and historical) have been conducted to identify the lack of Significant Biodiversity Values within the balance impact area.
- **Confirmed Areas of Remnant Vegetation Containing Endangered Regional Ecosystems** – there are no confirmed areas of remnant vegetation containing 'Endangered' Regional Ecosystems within the balance impact area works boundary, however, the eastern boundary of the impact area adjoins the conservation area which contains the 'Endangered' remnant vegetation. The impact to the surrounding areas will be mitigated through the management measures outlined in supporting documentation.
- **Other Vegetation** – there will be some removal of remnant vegetation not of 'Endangered' status within balance impact area. All clearing of native vegetation will be managed through the implementation of a Vegetation Clearing & Fauna Management Plan (VCFMP).
- **Koala** – the removal of Koala habitat is being compensated through a Federal offset.
- **Extinct, Critically Endangered, Endangered, Vulnerable and/or Near Threatened Species** – a VCFMP will be implemented to manage fauna during the clearing phases. Both the Koala and Grey-headed Flying-fox have been recorded across the broader Everleigh site. The removal of habitat for these species are being compensated through Federal offsets. No additional EVNT species were recorded within the boundaries of the balance impact area during surveys.
- **Native Fauna (non-EVNT)** – a VCFMP will be implemented to manage fauna during the clearing phases.
- **High Risk and Low Risk Species Management Programs** – impacts to both high risk and low risk species are being mitigated through the approval of species management programs that are under assessment.
- **Waterways & Drainage Features** – two (2) mapped flow paths are present adjoining the balance impact area, however, both are located within previously EDQ approved ROL areas. The feature mapped within the ROL6 application area was identified as reflecting a confirmed waterway area and will be retained and enhanced as part of the overarching strategy of the NESS to retain Significant Biodiversity Values within the site. A culvert crossing is to be constructed on the confirmed waterway as per the Fisheries Act. Scour protection for the culvert outlet will impact on downstream waterway values, however, the area will be rehabilitated in line with the NESS intent (refer ROL6 SBAR application for Guideline 14 response). Of note this waterway feature and buffer will not be impacted under this

proposal as rectified on-ground with the extent depicted in **Plan 5** indicative only at the GIS scale. The feature mapped within the ROL13 application area was identified as reflecting a drainage line and does not meet the requirements of a Significant Biodiversity Value. The ROL design has been based on the NESS and Context Plan outcomes that reviewed waterway values and respective mapping triggers at that time. The impact to the surrounding areas will be mitigated through the management measures outlined in supporting documentation. Also mapped within the balance impact area is an identified 'other drainage feature and watercourse' included within the NESS. Therefore, this feature does not fall within the Significant Biodiversity Values category.

- **Land Degradation** – an Erosion and Sediment Control Plan will be implemented to manage impacts from clearing and landscaping and potential deposition of erosion.
- **Pest and Weed species** – on-site rehabilitation includes the removal of weed and pest species. This element will be monitored, measured and managed throughout the course of the project.
- **Monitoring, Management Plans & Reporting** – A VCFMP is provided with this application.

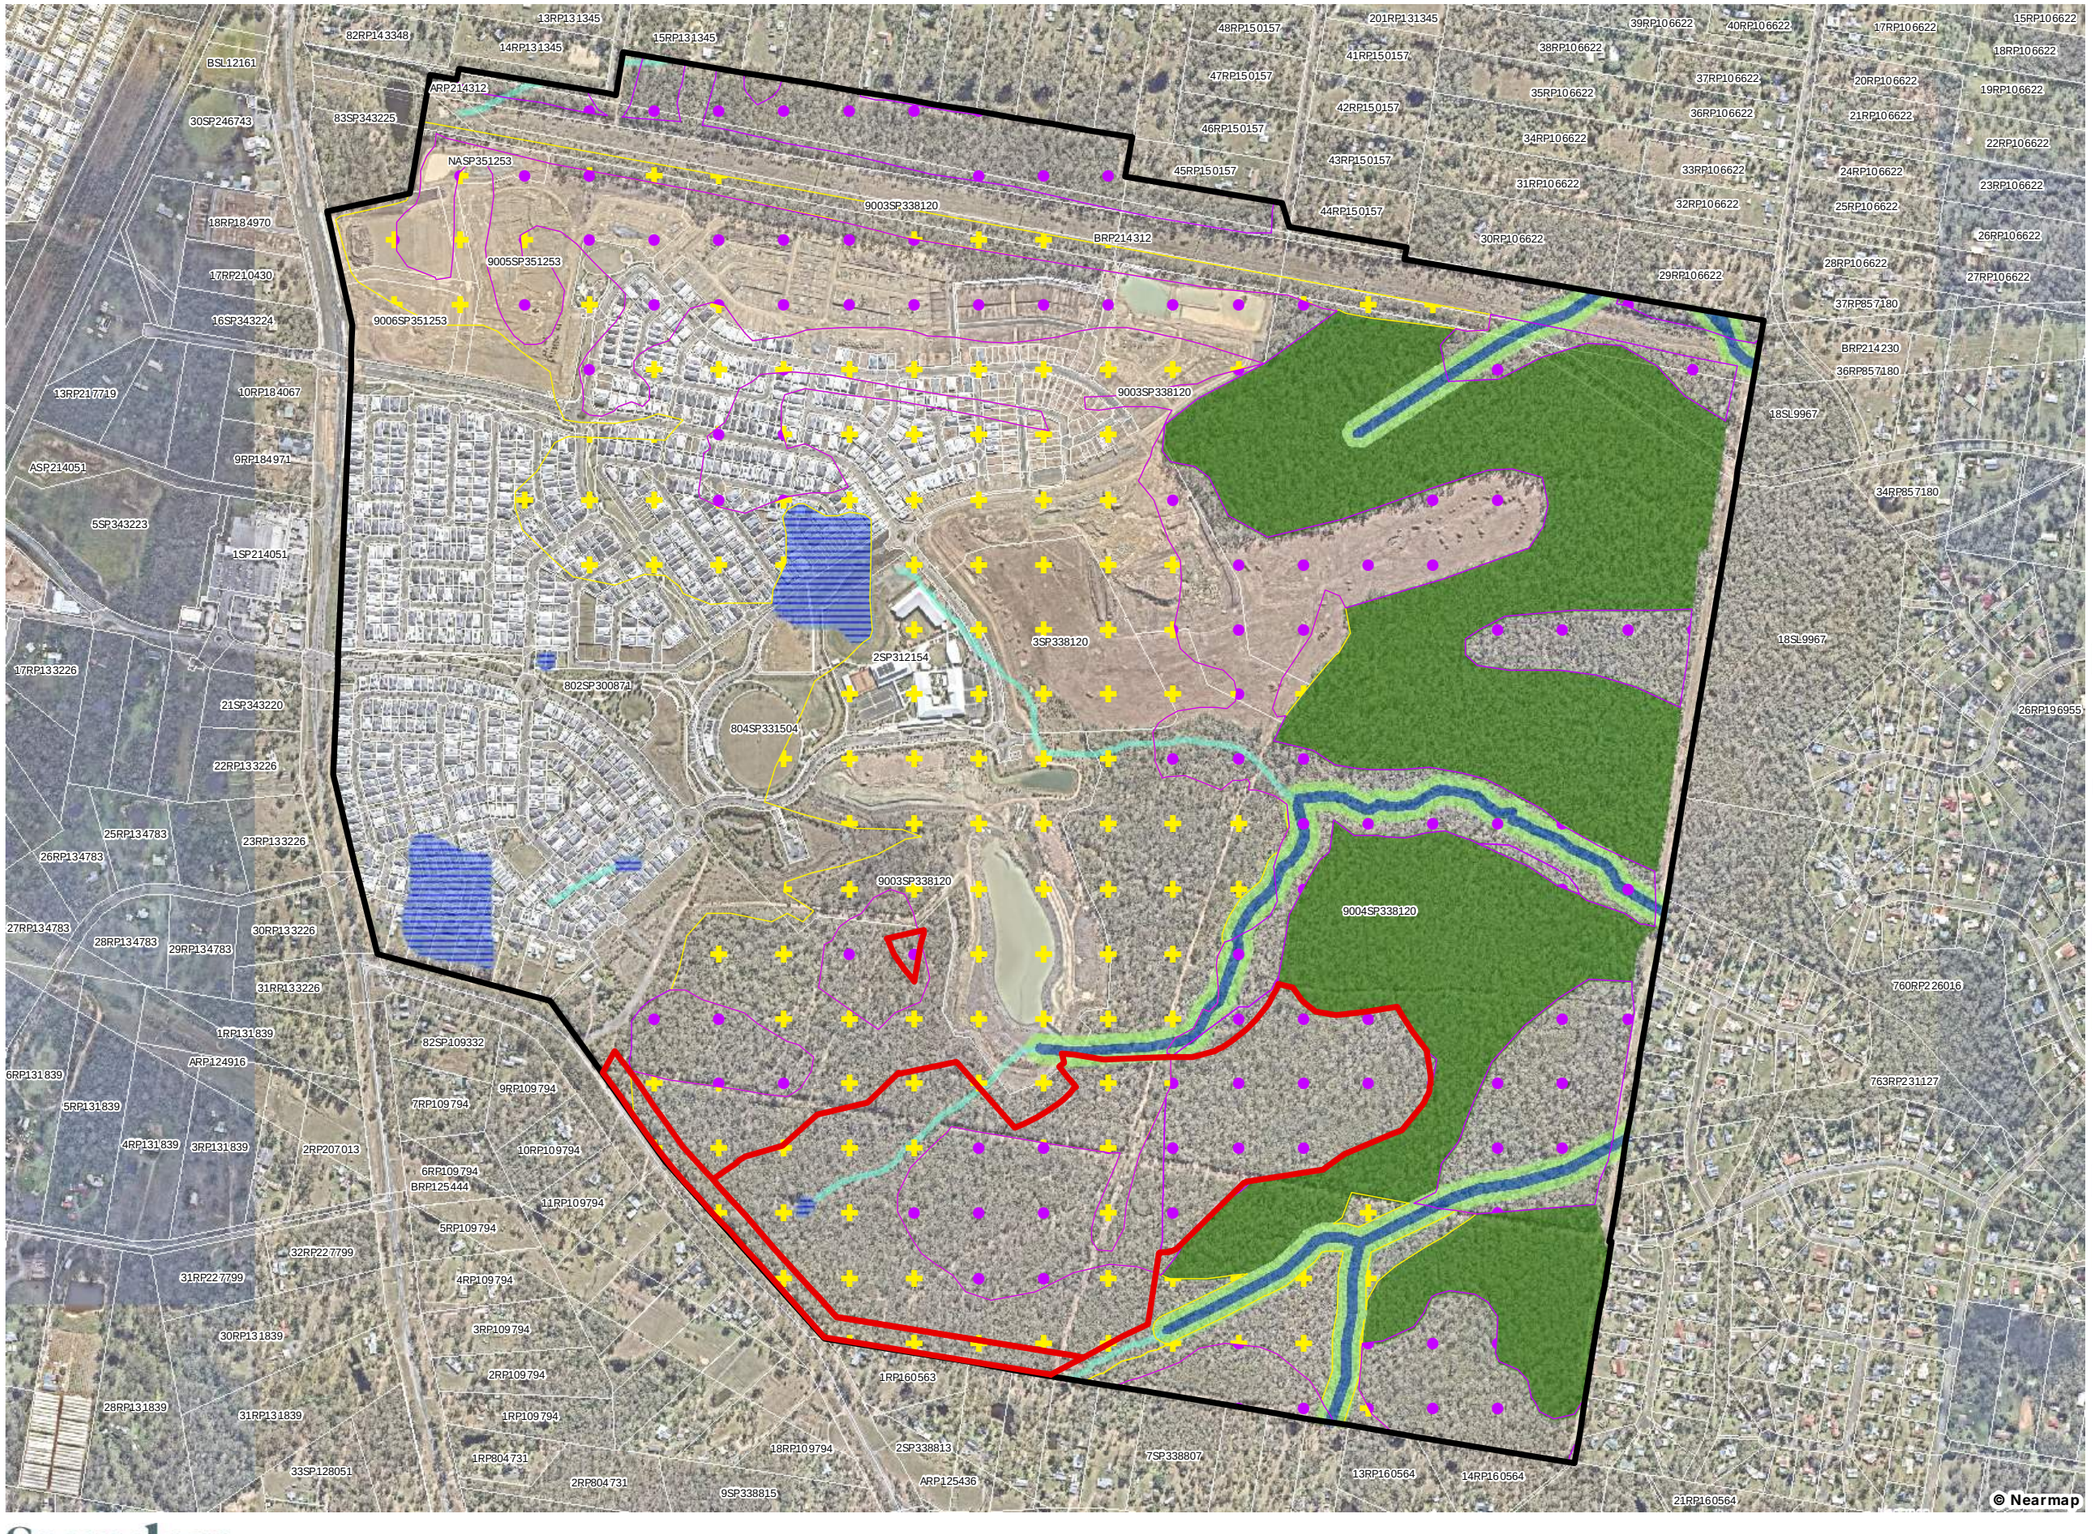
5.2. Natural Environmental Features

As defined by the NESS, the balance impact area contains the following natural features (**Plan 5**):

- Low order remnant vegetation;
- Other drainage features and watercourses;
- Project site farm dams;
- Areas of juvenile native vegetation.

The above identified NESS features are not identified as Significant Biodiversity Values under the NESS and are instead Other Biodiversity Values. As these are not identified as Significant Biodiversity Values under the NESS, they do not warrant a further response to PDA Guideline 14. Regardless, a response has been provided for EDQ consideration.

05.NESS CONSTRAINTS PLAN - BALANCE



Notes:
This plan was prepared as a desktop assessment tool. The information on this plan is not suitable for any other purpose. Property dimensions, areas, numbers of lots and contours and other physical features shown have been compiled from existing information and may not have been verified by field survey. These may need verification if the development application is approved and development proceeds, and may change when a full survey is undertaken or in order to comply with development approval conditions. No reliance should be placed on the information on this plan for detailed design or for any financial dealings involving the land. Saunders Havill therefore disclaims any liability for any loss or damage whatsoever or howsoever incurred, arising from any party using or relying upon this plan for any purpose other than as a document prepared for the sole purpose of accompanying a development application and which may be subject to alteration beyond the control of Saunders Havill.Unless a development approval states otherwise, this is not an approved plan.

- Qld DCDB
- Balance Impact Area

Significant Biodiversity Values

Confirmed Areas of Remnant Vegetation Containing Endangered Regional Ecosystems
Areas proposed and confirmed through Property Map of Assessable Vegetation application as retaining remnant vegetation of an Endangered Regional Ecosystem type (*82.49 hectares*)

Confirmed Waterway Areas
Areas confirmed through field survey. As retaining features consistent with a watercourse within the extent of the Project Site (*3.43 hectares*)

Other Biodiversity Values

Low Order Remnant Vegetation
Of Concern and Least Concern Regional Ecosystem type areas (*125.97 hectares*)

Waterway Buffer Areas
Areas of preferred buffer extent to Project Site watercourses (*13.71 hectares*)

Other Drainage Features & Watercourses
Areas within the site conveying current hydrology flow paths - *varying quality* (*0.39 hectares*)

Project Site Farm Dams
Locations of artificially created farm dams (*6.84 hectares*)

Areas of Juvenile Native Vegetation
Areas of Project Site retaining varying degrees of native regeneration vegetation (*154.0 hectares*)

6. PDA Guideline 14 response

As highlighted within the previous section, the balance impact area does not include areas identified as having Significant Biodiversity Values under the NESS. For clarity, an additional response to criteria illustrated within Guideline 14 is provided in **Table 9**.

Table 9: Response to PDA Guideline 14

Values	Strategies	Comments
1. Significant terrestrial biodiversity values Areas of significant biodiversity value may include: ▪ Land mapped in the applicable PDA development scheme as having significant biodiversity values ▪ Mapped biodiversity corridors identified in the applicable PDA development scheme ▪ Other areas of significance identified in the applicable PDA development scheme ▪ Viable areas of remnant vegetation containing endangered regional ecosystems as defined in Appendix 1 ▪ Listed threated species habitat	Identify significant terrestrial biodiversity values within and adjoining the development area by undertaking: ▪ Robust field surveys ▪ Desktop assessments using local, state and commonwealth environment databases and mapping searches Demonstrate how the development minimises impacts on significant biodiversity values by minimising vegetation clearing generally within the area and by specifically: ▪ Retaining and enhancing areas of viable remnant vegetation containing endangered regional ecosystems as defined in Appendix 1 ▪ Avoiding, minimising or off-setting the clearing of non-viable remnant vegetation containing endangered regional ecosystems as defined in Appendix 1 ▪ Minimising the clearing of remnant and regulated regrowth vegetation within the area ▪ Providing adequate buffers between development and any identified significant biodiversity value within or adjoining the development site ▪ Providing management plans to reduce and control clearing and manage other development and construction impacts in the area.	The project area and surrounding broader site have been subject to both desktop and on ground ecological assessments by SHG to identify existing ecological values at the site. The results of which have been summarised for the balance impact area in this SBAR. Desktop reporting was undertaken to inform on ground ecological surveys that included ground truthing flora, fauna, habitat and waterway field assessments over the entire project extent. Robust ecological surveys were undertaken in accordance with Commonwealth and State survey guidelines and best practice methods. Targeted flora and fauna surveys were undertaken specifically to identify the potential presence of threatened species and locate ecologically significant areas. A GPS tree plot of the entire impact area was undertaken to determine the habitat values for hollow dependent species and to provide data on species composition of the impacted vegetation. The results have been used to describe various on-site habitat and vegetation characteristics. As discussed in this SBAR memo, there are no areas within the balance impact area works extent that meet the Guideline 14 definition of a significant biodiversity value (including as identified under the NESS). Therefore, the proposal does not involve the removal of areas identified as having significant biodiversity values. The proposed development footprint does not contain any areas of ground-truthed remnant vegetation containing 'Endangered' regional ecosystems. The majority of the remaining impact development

Values	Strategies	Comments
		footprint, which has been subject to certified PMAVs, found the area predominately contains Category X (non-remnant) and areas of 'Of Concern' Category B (remnant) vegetation. Only viable Remnant 'Endangered' vegetation is identified as significant under Guideline 14. The removal of several polygons of Category B (remnant) 'Of Concern' or Low Order Remnant vegetation throughout the eastern and western sections of the balance footprint is to occur as a result of the development works. The balance of the impact footprint consists of areas of Juvenile Native Vegetation, a drainage feature and a relatively small project site farm dam. The removal of vegetation has been minimised and a VCFMP to manage clearing has been developed and included within this report. Impacts from the development planned for the balance impact area are to be negated through mitigation measures outlined in supporting documents. The entire project site, and immediate surrounding area located within the *GFPDA* and is zoned as Urban Living. This zone has been strategically identified as containing areas suitable for urban development to minimise impacts on landscape scale significant biodiversity values. Field surveys have identified *M. irbyana* within the broader project site, with several located within the Balance Impact Area to the south-west portions of the site. As *M. irbyana* were identified to be present in the broader project site, a Protected Plants Clearing Permit to manage *M. irbyana* across the broader urban development extent for the Everleigh development has been granted by the Department of Environment and Science (refer **Appendix D**). This permit included the establishment of a 5,000 m^2 *M. irbyana* thicket secured as a Category A

Values	Strategies	Comments
		area as an offset. Therefore the *M. irbyana* specimens identified within the broader site area are permitted by the State to be cleared.
2. Ecological connectivity	▪ Identify priority vegetation patches, fauna habitat features and fauna movement corridors in and beyond the application site through detailed site assessments completed in accordance with the relevant local government authority guidelines or planning scheme policies for ecological assessment ▪ Retain vegetation connections between priority vegetation patches, fauna habitat features and fauna linkages to ensure ecological connectivity is maintained or enhanced ▪ Minimise locating major infrastructure through identified corridor linkages ▪ Undertake strategic rehabilitation of degraded land where required to improve or create functioning corridors.	Ecological assessments completed by SHG in accordance with Guideline 14 requirements have been conducted across the entire project extent including the adjoining bushland situated east of the proposed development. This bushland is designated as Conservation Parkland Vegetation. The balance impact area was not observed to contribute to a fauna movement corridor, nor identified as a suitable corridor linkage. Across the Everleigh project extent, evidence of Koala was found in the form of scats with direct observations of individuals in earlier surveys. Thermal imagery surveys of surrounding areas for previous stages of works have recorded Koalas within the vicinity of the impact clearing area. Thermal imagery surveys are conducted prior to each stage of clearing. Across the broader project area, the proposed on-site rehabilitation directly adjoins the Conservation Parkland and will ensure continued connectivity between the retained waterway corridor in the broader project area and the Conservation Parkland. The bushland retains connectivity to the east along Norris Creek (high risk waterway for WWBW), however, does not connect to any significant State-wide corridors. Connectivity is limited north and south by easements and west by the presence of roads and on-going residential developments. The eastern boundary of the balance impact area adjoins the conservation area. The balance impact area does not contain areas of ground-truthed viable Category B (remnant) 'Endangered' vegetation, rather the precinct is located within areas of predominately Category X (non-

Values	Strategies	Comments
		remnant) and lower status Category B (remnant) 'Of Concern' vegetation. These are not considered to be significant biodiversity values under Guideline 14.
3. Sustainable landscaping practices	▪ Incorporate biodiversity friendly landscape principles and practices such as retaining habitat trees in road reserves and opens space areas ▪ Maximise use of locally occurring native species in landscaping ▪ Identified opportunities for revegetation and rehabilitation along waterways and biodiversity corridors	Sustainable landscape principles and practices will be incorporated within the development area under the proposal. These will include plantings from a localised native species pallet.
4. Bushfire risk management	▪ Ensure significant biodiversity values are protected from exempt clearing by ensuring new built infrastructure is adequately set back from identified biodiversity areas ▪ Where a firebreak is required to protect new infrastructure ensure clearing associated with the firebreaks is located external to significant biodiversity areas.	A Bushfire Management Plan has been addressed separately. Due to the proposed development and post-development vegetation settings, bushfire is not considered to pose a risk to the retained vegetation on the site, nor to the proposed development.

Values	Strategies	Comments
1. Wetlands	▪ Identify and accurately map the extent of, and describe the values for, any identified wetlands of high ecological significance and referrable wetlands ▪ Provide adequate buffers between development and wetlands that are in and adjacent to the PDA (where feasible incorporate open space, storm water treatment or fauna corridors within wetland buffers) ▪ Where a wetland of high ecological significance occurs, a minimum buffer of 50 metres between the	SARA Wetland Protection Area mapping and SPP MSES mapping does not identify protected wetlands within or adjacent to the proposal area. Surveys by SHG confirmed that no natural wetland values were identified across the site.

Values	Strategies	Comments
	development proposal and the wetland is recommended	
2. Waterways	▪ Identify and accurately map waterways in accordance with DES' stream order hierarchy (1-5). ▪ Determine existing and proposed waterway values of site stream orders (e.g. Intact remnant vegetation, riparian values, fauna connectivity, natural water quality function, watercourse stability) ▪ Retain waterways in their undisturbed condition by minimising disturbance to natural drainage. Where this is not proposed provide a detailed waterway assessment report justifying encroachment or removal of waterway areas. ▪ Provide adequate buffers between development and retained waterways to provide waterway protection including temperature, bank stability, light, aquatic habitat, terrestrial habitat. ▪ Where waterways have been designated or identified to provide dual use (fauna corridor, open space connection, stormwater conveyance) provide additional buffer setback.	Two (2) mapped flow paths adjoin the balance impact area and both are located within previously EDQ approved ROL areas. The feature mapped within the ROL6 application area was identified as reflecting a confirmed waterway area and will be retained and enhanced as part of the overarching strategy of the NESS to retain Significant Biodiversity Values within the site. A culvert crossing is to be constructed on the confirmed waterway as per Fisheries requirements. Scour protection for the culvert outlet will impact on downstream waterway values, however, the area will be rehabilitated in line with the NESS intent (refer ROL6 SBAR application for Guideline 14 response). The feature mapped within the ROL13 application area was identified as reflecting a drainage line and does not meet the requirements of a Significant Biodiversity Value. The ROL design has been based on the NESS and Context Plan outcomes that reviewed waterway values and respective mapping triggers at that time. The impact to the surrounding areas will be mitigated through the management measures outlined in supporting documentation. Also mapped within the balance impact area is an identified 'other drainage feature and watercourse' included within the NESS. Therefore, this feature does not fall within the Significant Biodiversity Values category.
3. Water Quality	▪ Water discharge to on-site and adjacent water systems (freshwater, estuarine and marine) must meet water quality standards under current Queensland legislation.	Stormwater Management and Erosion and Sediment Control Plans will be prepared as part of each ROL application and will manage and minimise potential impacts on mapped waterways lower in the catchment.

Values	Strategies	Comments
	▪ Soil disturbance must be managed to avoid associated contaminants entering adjacent water systems. ▪ Identify nutrient hazard areas and appropriately manage soil and groundwater disturbance to avoid or minimise nutrient mobilisation that may increase the risk of coastal algal blooms. ▪ Avoid or minimise waste water discharge from the site in accordance with a waste water management plan prepared by a suitably qualified person. ▪ Avoid areas with highly permeable soils or a high water table when locating waste disposal activities or facilities. ▪ Provide adequate buffers for water quality between development and retained waterways.	

7. Impact assessment and development analysis

7.1. Potential impacts

The key potential ecological impacts associated with the development proposal are described herein.

7.1.1 Vegetation clearing

The proposed action is located adjacent to several other residential developments in the *GFPDA* to cater for the increasing housing demands in SEQ. The remaining balance impact area footprint consists of native vegetation immediately adjacent to previously approved ROL stages and existing developments within the surrounds and local roads. Ecological field surveys did not identify any unique or significant biodiversity values within the balance impact area outside of the adjoining previously EDQ approved waterway features.

7.1.2 Vehicle movements

During construction, additional vehicles will be required on the subject site. Direct impact from vehicle movements on threatened species and vegetation communities include:

- Damage or destruction of vegetation or fauna habitat by vehicles traversing these areas; and
- Fauna strike.

Indirect impacts include:

- Interference of fauna through visual and noise impacts. This in turn can affect feeding, roosting, breeding, or nesting behaviour;
- Introducing and/or spreading weeds or feral animals carried on or in vehicles, resulting in deterioration or loss of vegetation and important fauna habitat; and
- Damage or destruction of vegetation and fauna habitat through smothering by dust generated by vehicles traversing the project area.

The site is situated between relatively well used roads and current construction activities within the surrounding area. As a result, vehicle movement is relatively high at present. With implementation of standard mitigation measures, the project is likely to result in a reduced impact to ecological values due to vehicular movements. Further, ecological field surveys confirmed that most fauna species present on-site are common or highly mobile avifauna.

7.1.3 Weeds

Increased vehicle movement during the vegetation clearing phase has the potential to increase the spread of weeds in the area, however, adjacent land holdings are highly modified or completely cleared, with the exception of the conservation area, where weed management procedures are to be implemented once construction has been completed. Therefore, with the implementation of standard mitigation measures, the project is likely to result in a negligible impact to ecological values due to the potential introduction/spread of weeds.

7.1.4 Earthworks

Construction activities have the potential to generate dust emissions. Dust emissions during construction will be temporary. The main sources of dust will be generated via:

- Wheel-generated dust from the haul roads created for the construction phase;
- Dust lift-off from exposed surfaces (e.g., construction roads and pads);
- Earthworks, including construction of the embankments, and moving, dumping, and shaping material; and
- Vegetation and soil clearing of the land.

Excessive deposition of dust on leaves of plants can suppress their growth and photosynthesis, resulting in reduced habitat quality for fauna. High levels of airborne dust can irritate the respiratory systems of fauna and potentially result in ingestion of dust-coated seeds and other foods. Excessive deposition of dust on open water bodies may also degrade water quality and overall habitat quality for fauna. Notably the site exists within a relatively urbanised environment with surrounding areas developed for residential purposes, apart from the conservation area to the east. With the implementation of standard mitigation measures, the project is likely to result in a temporary and minor impact to ecological values due to the generation of dust.

7.1.5 Light emissions during construction

Artificial light can affect both nocturnal and diurnal animals by disrupting behavioural patterns, with quality of light (e.g., wavelength, colour), intensity and duration potentially evoking different faunal responses. Impacts from increased light levels include disorientation from, or attraction toward, artificial sources of light; mortality from collisions with structures; and effects on light-sensitive cycles of species (e.g., breeding and migration for fauna and flowering in plants). An artificial increase in lighting can also affect abundance of predators.

Presence and intensity of artificial light in the project area will temporarily increase during the construction phase; however, night works will not be common. Lighting will be directed to construction areas within the project site. Some light spillage will be inevitable and is likely to be contained. Potential impacts associated with light emissions will be temporary and are unlikely to be significant given the general lack of surrounding vegetation. With the implementation of standard mitigation measures, the project is likely to result in a negligible impact to ecological values due to the use of light pollution during construction.

7.1.6 Noise and vibration

Noise levels greater than existing ambient noise levels are expected during the construction within the project area. Sources of noise are likely to consist of noise in short, intense pulses from mobile plant equipment, and more prolonged noise, with consistent vibration, pitch and volume from generators, excavators, and pumps, in addition from noise from vehicles.

Both steady continuous and single noise events have the potential to lead to ecological impacts. Construction noise is expected to elicit some avoidance response from fauna using the surrounding vegetation though, with consideration of the extent of habitat available in the study area, this is likely to be a temporary and negligible to minor impact.

7.1.7 Waste disposal

Inappropriate disposal of non-hazardous wastes can attract vermin and other wildlife to site. This may exacerbate potential impacts (e.g., road mortality). Litter may also enter surrounding environments. With the implementation of standard mitigation measures, the project is likely to result in a negligible impact to ecological values due to the generation and handling of waste. Due to the temporary nature of the construction phase, waste generation opportunities will be limited.

7.1.8 Hazardous and dangerous goods

Spills and leaks from transfers (fuel, chemicals) and inadequate storage of dangerous goods and hazardous wastes could result in point-source contamination of surrounding land. Direct adverse impacts could include toxic impacts on vegetation (resulting in degradation or loss of vegetation and habitats), direct toxic impacts on fauna (from contact, inhalation, or ingestion) or indirect impacts on threatened and migratory species from habitat loss. Direct adverse impacts on surface and groundwater quality are also possible.

With the application of standard mitigation and management measures, impacts from liquid and solid waste disposal will be avoided or localised and small in scale. Further to this, the likelihood of significant spillages is considered low. Therefore, the project is likely to result in a negligible impact to ecological values due to potential spills and leaks.

7.1.9 Increased human presence

Increased human activity during construction has the potential to disturb fauna within adjacent habitat areas. Examples of impacts included heightened vigilance and predator avoidance, which can disrupt foraging and roosting efficiency, or deter wildlife from using particular areas. Impacts essentially represent a reduction in core habitat due to edge effects. Given the site is situated centrally in the *GFPDA* and adjacent to current residential developments, it is likely that the increase in human presence will be negligible on fauna.

7.1.10 Ongoing disturbances

After completion of construction, the ongoing presence of infrastructure and increased human activity can continue to have potential for adverse direct and indirect impacts. The key continuing risks to ecological values include:

- Weed incursion;
- Vehicle movements;
- Noise and light; and
- Increased human presence.

Each potential impact associated with ongoing use of the site is described in detail in the following sections.

7.1.11 Weed incursion

Landscaped gardens will introduce a variety of new and exotic species to the area. Garden escapes have the potential to be introduced into adjacent bushland areas through vectors such as birds, wind, and runoff. Weed incursion will be ongoing and can be difficult to prevent. Nonetheless, the problem is often mostly constrained to edges of bushland that abut gardens and along urban drainage features.

With the implementation of standard mitigation measures, the project is likely to result in a minor impact to ecological values due the introduction and spread of weeds.

7.1.12 Vehicle strike

Upon completion of the development, there will be a significant increase of vehicle traffic (compared to baseline conditions), and this will increase the likelihood of fauna strike. The probability of fauna strike is reduced due to the fact that most fauna will generally avoid urban areas. Further, ecological field surveys confirmed that most fauna species present on-site are common or highly mobile avifauna. Notwithstanding this, a low number of macropods, as well as reptiles (i.e., snakes and lizards attracted to heat on roads) may occasionally enter the area and be at risk of vehicular strike. However, it is anticipated they will largely be contained to the conservation area. Further, the area is already subject to heavy vehicular traffic due to surrounding land uses.

7.1.13 Noise and light

Noise levels are likely to increase once the development is complete as there will be increased vehicular and pedestrian traffic. Road noise will be the primary source of noise impact. The establishment and use of garden paths through landscaped areas will also provide a source of noise and light due to pedestrian traffic. This is however expected to be minor.

Artificial light from residences may affect nocturnal and diurnal animals by disrupting patterns, with quality of light (e.g., wave length, colour), intensity and duration potentially evoking different responses. Impacts from increased light levels include disorientation from or attraction toward artificial sources of light; mortality from collisions with structures; and effects on light-sensitive cycles of species (e.g., breeding and migration for fauna and flowering in plants).

Artificial light would most likely affect fauna on the edges of adjacent vegetation. Further, given the existing approved developments and current construction in the areas surrounding the site, the small additional increase in light and noise as a result of the proposed development is considered likely to result in a negligible impact to wildlife due to light spillage.

7.1.14 Increased human presence

Increased human activity associated with land uses within the development has the potential to disturb fauna that exist within the broader area. Examples of impacts included heightened vigilance and predator avoidance, which can disrupt foraging and roosting efficiency, or deter wildlife from using particular areas.

Given the site is situated centrally in the *GFPDA* and adjacent to current residential developments, increased human presence is expected to have a negligible impact to wildlife and vegetation.

8. Management and compensatory measures

A number of management and compensatory measures are proposed to minimise and mitigate impacts associated with the development. These include:

8.1. Vegetation Clearing and Fauna Management Plan

A Vegetation Clearing and Management Plan (VCFMP) will form part of the broader management document for the proposed action. The VCFMP will cover clearing of all vegetation within the site and include details on:

- Clearly show all trees to be removed and retained.
- Include details of all civil works likely to impact on existing vegetation.
- Temporary and permanent exclusion and protection fencing for riparian corridors, significant habitat to retain, and parklands.
- Roles and responsibilities for site contractors, developer and the consultant group.
- Stockpiling and site access locations.
- A clearing sequencing plan showing the commencement of clearing and direction of removal (this should be in conjunction with the fauna management protocols to allow for the appropriate flushing of fauna towards surrounding safe haven areas.
- Links to weed management and revegetation proposals.
- The stock piling and reuse of cleared vegetation.
- Specific details on the removal of previously identified potential fauna habitat trees.
- Where trees are shown to be retained occur within disturbance zones they should be accompanied by necessary arborist specifications incorporated into the VCFMP.
- Designation of trees to be protected for the on-going life of the proposal which may require both immediate remedial works (Crown thinning, coppicing) and long-term monitoring for the potential of future works.

Under Queensland's *Nature Conservation Act 1992*, all native fauna are protected and as such the following activities are required to ensure that vegetation removal and construction does not adversely affect native fauna species:

- Immediately prior to the commencement of clearing of native vegetation, a daily visual inspection of the area must be carried out;
- In the event of an animal being located, an area of 5 metres radius should be established around the tree, excluding machinery from this area until the animal has relocated (usually overnight); or
- If an animal requires relocating, this must be undertaken by a suitable qualified fauna expert (e.g. fauna spotter-catcher) recognised by the Queensland Parks and Wildlife Service.

- Any native fauna orphaned or injured by the development process must be reported to the Queensland Parks and Wildlife Service.
- The site supervisor is responsible for the safe management of site fauna and implementation of these specific fauna requirements.

Fauna management information included in the VCFMP and will include:

- Species surveyed as using the site with a focus on those most likely impacted by development works.
- A list of relevant State and Commonwealth legislation constraints and controls for the above listed fauna.
- A plan showing existing habitat opportunities and locations.
- Details of the threats to existing fauna species.
- Clearing sequence plan from the VCFMP.
- Management and mitigation measures *i.e.,* temporary use of fauna exclusion fencing.
- Fauna spotter role, contacts and certification.
- Specific fauna management procedures for potential or known habitat trees.

8.2. Fauna Spotter Catcher

A registered and suitability qualified fauna spotter catcher/ecologist will need to be employed for clearing works to implement a protocol of best management practises. Significant habitat features, should any be identified on site, will be flagged prior to clearing events and these areas supervised by an appropriately experienced Ecologist. Identified within the clearing supervision protocol should be flagging of hollow bearing trees, if present, followed by the removal of vegetation surrounding them. After 24 to 72 hours, these trees should then be removed.

The objective of this is to enable hollow dependant fauna an opportunity to move on their own accord as many species utilise multiple den/roost sites within a given home range should they occur. Where required, native fauna situated within areas to be cleared will be relocated to a secure area of similar habitat prior to the commencement of vegetation clearance works by a registered fauna spotter/catcher. Should any removal and relocation of nests be required, it is to be undertaken by a suitably qualified and experienced person and advice sought where necessary.

Notably, a High Risk and Low Risk Species Management Program is currently under assessment by the State and covers the balance impact area.

9. Conclusions

This SBAR was prepared on behalf of Mirvac Queensland Pty Ltd to determine the potential environmental impacts associated with the balance impact area within the masterplan development located at Everleigh, Teviot Road, Greenbank. This report provides a review of the ecological values across the balance clearing footprint of the wider Everleigh master-planned area, identified through desktop analysis and field surveys, in accordance with Commonwealth, State and Local Government Legislation in support of the ROL application to EDQ.

Overall, the following conclusions can be made:

- The Balance Impact Area does not contain natural features that meet the Significant Biodiversity Value classification under the NESS.
- The Balance Impact area application is considered compliant with the criteria of the higher-level endorsed NESS.
- The *M. irbyana* specimens located across the broader site, were not of sufficient structure, density or size to constitute the Swamp Tea-tree Forest of South-east Queensland TEC. Notably, a State permit to clear *M. irbyana* is in place for the project area. No other threatened species nor communities listed under the NCA or EPBC Act were observed during the contemporary field survey.
- Of note, impacts on the Koala and Grey-Headed Flying-fox have been offset for the Everleigh project under the EPBC Act approval.

EPBC Act Protected Matters Report

EPBC Act Protected Matters Report

This report provides general guidance on matters of national environmental significance and other matters protected by the EPBC Act in the area you have selected. Please see the caveat for interpretation of information provided here.

Report created: 26-Jun-2025

Summary
Details
- Matters of NES
- Other Matters Protected by the EPBC Act
- Extra Information

Summary

Matters of National Environment Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the Administrative Guidelines on Significance.

World Heritage Properties:	None
National Heritage Places:	None
Wetlands of International Importance (Ramsar	1
Great Barrier Reef Marine Park:	None
Commonwealth Marine Area:	None
Listed Threatened Ecological Communities:	8
Listed Threatened Species:	54
Listed Migratory Species:	13

Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at https://www.dcceew.gov.au/parks-heritage/heritage

A permit may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

Commonwealth Lands:	7
Commonwealth Heritage Places:	1
Listed Marine Species:	24
Whales and Other Cetaceans:	None
Critical Habitats:	None
Commonwealth Reserves Terrestrial:	None
Australian Marine Parks:	None
Habitat Critical to the Survival of Marine Turtles:	None

Extra Information

This part of the report provides information that may also be relevant to the area you have

State and Territory Reserves:	2
Regional Forest Agreements:	None
Nationally Important Wetlands:	1
EPBC Act Referrals:	24
Key Ecological Features (Marine):	None
Biologically Important Areas:	None
Bioregional Assessments:	1
Geological and Bioregional Assessments:	None

Details

Matters of National Environmental Significance

Wetlands of International Importance (Ramsar Wetlands) [Resource Information]

Ramsar Site Name	Proximity	Buffer Status
Moreton bay	20 - 30km upstream from Ramsar site	In feature area

Listed Threatened Ecological Communities [Resource Information]

For threatened ecological communities where the distribution is well known, maps are derived from recovery plans, State vegetation maps, remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.
Status of Vulnerable, Disallowed and Ineligible are not MNES under the EPBC Act.

Community Name	Threatened Category	Presence Text	Buffer Status
Coastal Swamp Oak (Casuarina glauca) Forest of New South Wales and South East Queensland ecological community	Endangered	Community may occur within area	In feature area
Coastal Swamp Sclerophyll Forest of New South Wales and South East Queensland	Endangered	Community likely to occur within area	In feature area
Grey box-grey gum wet forest of subtropical eastern Australia	Endangered	Community likely to occur within area	In buffer area only
Lowland Rainforest of Subtropical Australia	Critically Endangered	Community may occur within area	In feature area
Poplar Box Grassy Woodland on Alluvial Plains	Endangered	Community may occur within area	In feature area
Subtropical eucalypt floodplain forest and woodland of the New South Wales North Coast and South East Queensland bioregions	Endangered	Community likely to occur within area	In feature area
Swamp Tea-tree (Melaleuca irbyana) Forest of South-east Queensland	Critically Endangered	Community likely to occur within area	In buffer area only
White Box-Yellow Box-Blakely's Red Gum Grassy Woodland and Derived Native Grassland	Critically Endangered	Community may occur within area	In feature area

Listed Threatened Species [Resource Information]

Status of Conservation Dependent and Extinct are not MNES under the EPBC Act.
Number is the current name ID.

Scientific Name	Threatened Category	Presence Text	Buffer Status

Scientific Name	Threatened Category	Presence Text	Buffer Status
BIRD			
Anthochaera phrygia Regent Honeyeater [82338]	Critically Endangered	Species or species habitat known to occur within area	In feature area
Botaurus poiciloptilus Australasian Bittern [1001]	Endangered	Species or species habitat likely to occur within area	In feature area
Calidris acuminata Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat likely to occur within area	In feature area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat may occur within area	In feature area
Calyptorhynchus lathami lathami South-eastern Glossy Black-Cockatoo [67036]	Vulnerable	Species or species habitat known to occur within area	In feature area
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat may occur within area	In feature area
Climacteris picumnus victoriae Brown Treecreeper (south-eastern) [67062]	Vulnerable	Species or species habitat may occur within area	In feature area
Cyclopsitta diophthalma coxeni Coxen's Fig-Parrot [59714]	Critically Endangered	Species or species habitat may occur within area	In feature area
Erythrotriorchis radiatus Red Goshawk [942]	Endangered	Species or species habitat likely to occur within area	In feature area
Falco hypoleucos Grey Falcon [929]	Vulnerable	Species or species habitat known to occur within area	In feature area
Gallinago hardwickii Latham's Snipe, Japanese Snipe [863]	Vulnerable	Species or species habitat known to occur within area	In feature area

Scientific Name	Threatened Category	Presence Text	Buffer Status
[Geophaps scripta scripta](#) Squatter Pigeon (southern) [64440]	Vulnerable	Species or species habitat may occur within area	In feature area
[Grantiella picta](#) Painted Honeyeater [470]	Vulnerable	Species or species habitat may occur within area	In feature area
[Hirundapus caudacutus](#) White-throated Needletail [682]	Vulnerable	Species or species habitat known to occur within area	In feature area
[Lathamus discolor](#) Swift Parrot [744]	Critically Endangered	Species or species habitat likely to occur within area	In feature area
[Numenius madagascariensis](#) Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat may occur within area	In feature area
[Rostratula australis](#) Australian Painted Snipe [77037]	Endangered	Species or species habitat known to occur within area	In feature area
[Stagonopleura guttata](#) Diamond Firetail [59398]	Vulnerable	Species or species habitat may occur within area	In feature area
[Tringa nebularia](#) Common Greenshank, Greenshank [832]	Endangered	Species or species habitat likely to occur within area	In feature area
[Turnix melanogaster](#) Black-breasted Button-quail [923]	Vulnerable	Species or species habitat likely to occur within area	In feature area
FISH			
[Maccullochella mariensis](#) Mary River Cod [83806]	Endangered	Translocated population known to occur within area	In buffer area only
FROG			
[Mixophyes fleayi](#) Fleay's Frog [25960]	Endangered	Species or species habitat may occur within area	In buffer area only
INSECT			

Scientific Name	Threatened Category	Presence Text	Buffer Status
Argynnis hyperbius inconstans			
Australian Fritillary [88056]	Critically Endangered	Species or species habitat may occur within area	In feature area
MAMMAL			
Chalinolobus dwyeri			
Large-eared Pied Bat, Large Pied Bat [183]	Endangered	Species or species habitat may occur within area	In feature area
Dasyurus maculatus maculatus (SE mainland population)			
Spot-tailed Quoll, Spotted-tail Quoll, Tiger Quoll (southeastern mainland population) [75184]	Endangered	Species or species habitat known to occur within area	In feature area
Macroderma gigas			
Ghost Bat [174]	Vulnerable	Species or species habitat may occur within area	In feature area
Petauroides volans			
Greater Glider (southern and central) [254]	Endangered	Species or species habitat known to occur within area	In feature area
Petaurus australis australis			
Yellow-bellied Glider (south-eastern) [87600]	Vulnerable	Species or species habitat known to occur within area	In feature area
Phascolarctos cinereus (combined populations of Qld, NSW and the ACT)			
Koala (combined populations of Queensland, New South Wales and the Australian Capital Territory) [85104]	Endangered	Species or species habitat known to occur within area	In feature area
Potorous tridactylus tridactylus			
Long-nosed Potoroo (northern) [66645]	Vulnerable	Species or species habitat may occur within area	In feature area
Pseudomys novaehollandiae			
New Holland Mouse, Pookila [96]	Vulnerable	Species or species habitat may occur within area	In feature area
Pteropus poliocephalus			
Grey-headed Flying-fox [186]	Vulnerable	Foraging, feeding or related behaviour known to occur within area	In feature area
PLANT			

Scientific Name	Threatened Category	Presence Text	Buffer Status
Arthraxon hispidus Hairy-joint Grass [9338]	Vulnerable	Species or species habitat likely to occur within area	In feature area
Bosistoa transversa Three-leaved Bosistoa, Yellow Satinheart [16091]	Vulnerable	Species or species habitat may occur within area	In buffer area only
Coleus habrophyllus listed as Plectranthus habrophyllus [91378]	Endangered	Species or species habitat known to occur within area	In feature area
Cupaniopsis shirleyana Wedge-leaf Tuckeroo [3205]	Vulnerable	Species or species habitat may occur within area	In buffer area only
Cupaniopsis tomentella Boonah Tuckeroo [3322]	Vulnerable	Species or species habitat likely to occur within area	In buffer area only
Dichanthium setosum bluegrass [14159]	Vulnerable	Species or species habitat likely to occur within area	In feature area
Fontainea venosa [24040]	Vulnerable	Species or species habitat may occur within area	In feature area
Leuzea australis listed as Rhaponticum australe Austral Cornflower, Native Thistle [9363]	Vulnerable	Species or species habitat may occur within area	In feature area
Macadamia integrifolia Macadamia Nut, Queensland Nut Tree, Smooth-shelled Macadamia, Bush Nut, Nut Oak [7326]	Vulnerable	Species or species habitat likely to occur within area	In feature area
Macadamia tetraphylla Rough-shelled Bush Nut, Macadamia Nut, Rough-shelled Macadamia, Rough-leaved Queensland Nut [6581]	Vulnerable	Species or species habitat may occur within area	In feature area
Notelaea lloydii Lloyd's Olive [15002]	Vulnerable	Species or species habitat likely to occur within area	In feature area

Scientific Name	Threatened Category	Presence Text	Buffer Status
Notelaea x ipsviciensis listed as Notelaea ipsviciensis			
Cooneana Olive [93460]	Critically Endangered	Species or species habitat may occur within area	In feature area
Picris evae			
Hawkweed [10839]	Vulnerable	Species or species habitat may occur within area	In feature area
Planchonella eerwah			
Shiny-leaved Condoo, Black Plum, Wild Apple [17340]	Endangered	Species or species habitat likely to occur within area	In feature area
Rhodamnia rubescens			
Scrub Turpentine, Brown Malletwood [15763]	Critically Endangered	Species or species habitat may occur within area	In feature area
Rhodomyrtus psidioides			
Native Guava [19162]	Critically Endangered	Species or species habitat may occur within area	In feature area
Samadera bidwillii			
Quassia [29708]	Vulnerable	Species or species habitat likely to occur within area	In feature area
Thesium australe			
Austral Toadflax, Toadflax [15202]	Vulnerable	Species or species habitat likely to occur within area	In feature area
REPTILE			
Coeranoscincus reticulatus			
Three-toed Snake-tooth Skink [59628]	Vulnerable	Species or species habitat may occur within area	In feature area
Delma torquata			
Adorned Delma, Collared Delma [1656]	Vulnerable	Species or species habitat may occur within area	In feature area
Furina dunmalli			
Dunmall's Snake [59254]	Vulnerable	Species or species habitat may occur within area	In feature area
Hemiaspis damelii			
Grey Snake [1179]	Endangered	Species or species habitat likely to occur within area	In feature area
Listed Migratory Species			[Resource Information]

Scientific Name	Threatened Category	Presence Text	Buffer Status
Migratory Marine Birds			
Apus pacificus Fork-tailed Swift [678]		Species or species habitat likely to occur within area	In feature area
Migratory Terrestrial Species			
Cuculus optatus Oriental Cuckoo, Horsfield's Cuckoo [86651]		Species or species habitat may occur within area	In feature area
Hirundapus caudacutus White-throated Needletail [682]	Vulnerable	Species or species habitat known to occur within area	In feature area
Motacilla flava Yellow Wagtail [644]		Species or species habitat may occur within area	In feature area
Migratory Wetlands Species			
Actitis hypoleucos Common Sandpiper [59309]		Species or species habitat may occur within area	In feature area
Calidris acuminata Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat likely to occur within area	In feature area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat may occur within area	In feature area
Calidris melanotos Pectoral Sandpiper [858]		Species or species habitat may occur within area	In feature area
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat may occur within area	In feature area
Gallinago hardwickii Latham's Snipe, Japanese Snipe [863]	Vulnerable	Species or species habitat known to occur within area	In feature area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat may occur within area	In feature area

Scientific Name	Threatened Category	Presence Text	Buffer Status
Pandion haliaetus			
Osprey [952]		Species or species habitat may occur within area	In feature area
Tringa nebularia			
Common Greenshank, Greenshank [832]	Endangered	Species or species habitat likely to occur within area	In feature area

Other Matters Protected by the EPBC Act

Commonwealth Lands [Resource Information]

The Commonwealth area listed below may indicate the presence of Commonwealth land in this vicinity. Due to the unreliability of the data source, all proposals should be checked as to whether it impacts on a Commonwealth area, before making a definitive decision. Contact the State or Territory government land department for further information.

Commonwealth Land Name	State	Buffer Status
Defence		
Defence - GREENBANK TRAINING AREA [31009]	QLD	In buffer area only
Defence - GREENBANK TRAINING AREA [31014]	QLD	In buffer area only
Defence - GREENBANK TRAINING AREA [31013]	QLD	In buffer area only
Defence - GREENBANK TRAINING AREA [31012]	QLD	In buffer area only
Defence - GREENBANK TRAINING AREA [31011]	QLD	In buffer area only

1 PURPOSE

This report is designed to assist in identifying the location of matters of national environmental significance (MNES) and other matters protected by the Environment Protection and Biodiversity Conservation Act 1999 (Cth) (EPBC Act) which may be relevant in determining obligations and requirements under the EPBC Act.

The report contains the mapped locations of:

- World and National Heritage properties;
- Wetlands of International and National Importance;
- Commonwealth and State/Territory reserves;
- distribution of listed threatened, migratory and marine species;
- listed threatened ecological communities; and
- other information that may be useful as an indicator of potential habitat value.

2 DISCLAIMER

This report is not intended to be exhaustive and should only be relied upon as a general guide as mapped data is not available for all species or ecological communities listed under the EPBC Act (see below). Persons seeking to use the information contained in this report to inform the referral of a proposed action under the EPBC Act should consider the limitations noted below and whether additional information is required to determine the existence and location of MNES and other protected matters.

Where data is available to inform the mapping of protected species, the presence type (e.g. known, likely or may occur) that can be determined from the data is indicated in general terms. It is the responsibility of any person using or relying on the information in this report to ensure that it is suitable for the circumstances of any proposed use. The Commonwealth cannot accept responsibility for the consequences of any use of the report or any part thereof. To the maximum extent allowed under governing law, the Commonwealth will not be liable for any loss or damage that may be occasioned directly or indirectly through the use of, or reliance on the contents of this report.

3 DATA SOURCES

Threatened ecological communities

For threatened ecological communities where the distribution is well known, maps are generated based on information contained in recovery plans, State vegetation maps and remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species

Threatened, migratory and marine species distributions have been discerned through a variety of methods. Where distributions are well known and if time permits, distributions are inferred from either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc.) together with point locations and described habitat; or modelled (MAXENT or BIOCLIM habitat modelling) using point locations and environmental data layers.

Where little information is available for a species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc.).

In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More detailed distribution mapping methods are used to update these distributions when time permits.

4 LIMITATIONS

The following species and ecological communities have not been mapped and do not appear in this report:

- threatened species listed as extinct or considered vagrants;
- some recently listed species and ecological communities;
- some listed migratory and listed marine species, which are not listed as threatened species; and
- migratory species that are very widespread, vagrant, or only occur in Australia in small numbers.

The following groups have been mapped, but may not cover the complete distribution of the species:

- listed migratory and/or listed marine seabirds, which are not listed as threatened, have only been mapped for recorded breeding sites; and
- seals which have only been mapped for breeding sites near the Australian continent

The breeding sites may be important for the protection of the Commonwealth Marine environment.

Refer to the metadata for the feature group (using the Resource Information link) for the currency of the information.

Protected Plants Clearing Permit

Permit

Section 86 of Nature Conservation (Plants) Regulation 2020

Protected Plant Clearing Permit

This wildlife authority is issued under the following legislation: Nature Conservation (Plants) Regulation 2020.

Permit number: WA0062493 **Valid from:** 23 August 2024 to 22 August 2026

Activity: Clearing endangered, vulnerable or near threatened plants

Role	Name	Registered address	
Principal Holder:	MIRVAC QUEENSLAND PTY LIMITED	80 Ann St BRISBANE CITY QLD 4000 Australia	
Person In Charge:	Mark Clancy		
Business name:		**ABN/ACN**	060411207
Activity location/licensed premises	432-520 Greenbank Rd GREENBANK QLD 4124		

Schedule

Family or Species or Schedule	Details	Category	Quantity	Unit
Species	bush house or weeping paperbark or swamp teatree, Melaleuca irbyana	Live	164.97	Hectares

Christian Retschlag

Queensland Government

Nature Conservation Legislative Requirements and Conditions

Legislative Requirements

PPCLR01 This permit does not exempt the permit holder from obtaining other approvals relevant to the harvest of whole protected plants at the site.

PPCLR02 Activities carried out under this authority apply to non-protected areas only.

PPCLR03 This permit includes the clearing of least concern protected plants within the clearing area.

Conditions

PPCM02 The permit holder is to notify the department in writing at least 48 hours in advance of clearing commencing, for example, via an email to wildlife.management@des.qld.gov.au

PPCC001 This permit approves the clearing impact area of 164.97ha, with fifty-five (55) individuals of Melaleuca irbyana to be directly impacted and authorises the clearing of plants and species in the clearing area that were not specified in the Flora Survey Report.

PPCM001 Activities relating to the impact of the threatened species listed on this permit must be in accordance with the procedures and actions outlined in the following documents, except where conditions below indicate otherwise:

"Impact Management Plan, Melaleuca irbyana, Renewal for Permit No. WA0045420, 432 – 520 Greenbank Road, Greenbank, Prepared for Mirvac Queensland Pty Ltd, 16 August 2024, Job No. 7598 E", associated appendices and any other supporting documentation submitted to the department in relation to application number APP0131228 lodged electronically on 08 July 2024.

PPCP003 ADVISORY INFORMATION NOTICE: Clearing is to be conducted in a sequential manner and must be conducted in a way that directs escaping wildlife away from the area and into adjacent natural areas. A licensed spotter/catcher must be employed where there is a risk to native fauna present within the clearing site. The permit holder must ensure any injured animals are referred to an appropriate wildlife carer group or veterinarian.

PPCP004 Rehabilitation and/or translocation reporting advising of the progress and outcome of impact management measures to the habitat and/ local population of the listed protected plants must be maintained from the commencement date of the impact management program and continue until the expiration of the permit.

The written report (including advice on each monitoring period) must be lodged with the department via an email to wildlife.operations@des.qld.gov.au within 10 business days after each annual period.
