1. Introduction

Saunders Havill Group (SHG) was engaged by Mirvac Queensland Pty Ltd to prepare a Significant Biodiversity Assessment Report (SBAR) in response to Economic Development Queensland's (EDQ) *PDA Guideline No. 14 – Environmental values and sustainable resources* (Guideline 14) to support a Reconfiguration of a Lot (ROL) application to EDQ. The study area for this report is residential Precincts 5, 6 & 7 (ROL 13) within the Everleigh master planned development (refer **Figure 1** for Site Context & **Figure 2** for Site Aerial).

The broader project site is located within the Greater Flagstone Priority Development Area (GFPDA) and as such is governed by EDQ. Although being entirely included within the Logan City Council (LCC) Local Government Area, EDQ have jurisdiction for the implementation and enforcement of development applications in relation to the project as a key regulator of development within Priority Development Areas (PDA) for the Department of State Development and Infrastructure (DSDI). Despite this legislative position on assessment, the majority of infrastructure assets, inclusive of open space and the proposed Conservation Area, ultimately transition to the ownership of LCC.

Contextually, the subject area is located approximately 10 kilometers (km) west of Logan Village and 25 km south-east of Ipswich. The broader site is currently undergoing earthworks and construction for earlier stages of the masterplan development.

2. Desktop review

2.1. Historical and contemporary legislative review

Table 2 below provides a review of contemporary legislative provisions potentially constraining Precincts 5, 6 & 7. Maps are provided in **Appendix A**.

Table 2: State and Local governmental legislation and mapping constraints relative to the site

Legislation	Mapping	Purpose	Contemporary Site Relevance
<i>Environmental Protection & Biodiversity Conservation Act 1999</i> (EPBC Act)	N/A	The Australian Government's key piece of environmental legislation is the EPBC Act. The EPBC Act aims to protect and manage matters of environmental significance which include nationally and internationally important flora, fauna, ecological communities and heritage places.	The Protected Matters Search Tool (PMST) identified thirty-four (34) protected fauna species, fifteen (15) flora species, and six (6) Threatened Ecological Communities (TECs) as potentially occurring within a 5 km radius of the site (refer Appendix B). In 2016, the broader project site was referred and assessed under the EPBC Act (ref: 2016/7817) as the development was determined to have a significant impact on EPBC Act listed species. The action was approved in 2019 and commenced on the 18 November 2019 with the clearing of Stage 1. Impacts on Koala Habitat and Grey-headed Flying-fox foraging habitat are being offset under the conditions of the EPBC Act approval.
<i>Nature Conservation Act 1992</i> (NCA)	Appendix A - Map 5: Protected Plants Trigger Map	The NCA classifies and protects significant areas (Protected Areas) and protects Threatened plant and animal species. The <i>Nature Conservation (Animal) Regulation 2020</i> and <i>Nature Conservation (Plant) Regulation 2020</i> lists animal and plant species presumed extinct, critically endangered, endangered, vulnerable, near threatened, least concern, international or prohibited.	The Wildlife Online search tool identified seven (7) species listed under the NCA as potentially occurring within a 5 km radius of the site (refer Appendix C). Of these, <i>Phascolarctos cinereus</i> (Koala) and <i>Melaleuca irbyana</i> (Swamp Tea Tree) have been recorded across the broader property. Notably, almost the entirety of Precincts 5, 6 & 7 are mapped within a High-Risk Area for protected plants. During the Protected Plants Flora Survey across the

Legislation	Mapping	Purpose	Contemporary Site Relevance
			subject area no protected plants were identified. Impacts to Koala have been addressed at the Federal level (refer EPBC 2016/7817) and a permit to clear <i>M. irbyana</i> across the broader urban development extent for Everleigh has been granted by the Department of Environment and Science and is currently under renewal (refer WA0045420 at Appendix D).
Vegetation Management Act 1999 (VMA)	Appendix A - Map 6: Regulated Vegetation Management Map Appendix A - Map 7: Supporting Vegetation Management Map	The VMA is the key mechanism by which the Queensland Government protects the state's environmental resources pertaining to vegetation. Under the VMA, a series of maps delineate vegetation features across the landscape which are each assigned a conservation value directly related to the remaining extent of these features in the landscape. The VMA also protects 'essential habitat' vegetation where listed threatened species have been known to occur.	Precincts 5, 6 & 7 are mapped as containing Category X (non-remnant) and Category B (remnant) vegetation. Category X is not regulated under the VMA, however Category B (remnant) is deemed regulated vegetation. Category B (remnant) vegetation mapped on-site is 'Of Concern' status and is located within the eastern portions of the site. Essential habitat is also mapped within the areas of the ROL13 impact area, these include <i>Crinia tinnula</i> (Wallum Froglet) <i>Phascolarctos cinereus</i> (Koala) <i>Calyptrorhynchus lathami</i> (Glossy Black-cockatoo) <i>Dasyurus maculatus maculatus</i> (Spotted-tailed Quoll) and <i>Ninox strenua</i> (Powerful Owl). A watercourse defined under the VMA is mapped as intersecting the centerline between Precincts 5 and 6. This feature traverses the site from the western area of non-remnant vegetation in an easterly direction through the remnant vegetation. It is important to note that the provisions of the VMA do not apply in a PDA except where relevant to the Development Scheme. Further, the endorsed Natural Environment Site Strategy under DEV2016/768 does not identify any

Legislation	Mapping	Purpose	Contemporary Site Relevance
			significant biodiversity values within the Precinct 5, 6 & 7 works area (refer Section 4).
Koala priority areas and koala habitat areas (administered under the <i>Planning Regulation 2017</i> (PR))	Appendix A - Map 8: Koala priority areas and koala habitat areas map Appendix A - Map 9: Koala habitat values	The PR deals with development within mapped Koala habitat areas by regulating the clearing of mapped Koala habitat and stipulating how it must be cleared. The new mapping, implemented in February 2020 uses mapped Koala Priority Areas and Koala habitat areas to determine the response or referral pathway required for the site. Koala Habitat Areas are Matters of State Environmental Significance (MSES) and are reflected in the State Planning Policy. The LCC Planning Scheme mapping has not been updated to reflect these changes. Under Koala habitat mapping, Schedule 11, Part 2 of the PR is not applicable as the premises on which the development is carried out is within a PDA. As such, no State Code 25 response or referral is required for the site.	Not applicable. The site is mapped outside a Koala Priority Area and contains Koala Habitat Area throughout parts of Precinct 5, 6 & 7, in association with the remnant vegetation mapping. However, as the site falls within the GFPDA, the Koala Habitat triggers do not apply. Impacts on Koala Habitat are being managed by an offset under the EPBC Act (refer EPBC 2016/7817).
Fish Habitat Areas (<i>Fisheries Act 1994</i>)	Appendix A - Map 16: Fisheries WWBW Map	The <i>Fisheries Act 1994</i> deals with the use, conservation and improvement of Queensland's fisheries resources and fish habitats. The legislation deals with the impact from coastal development on marine fish habitat, including protected marine plants and declared fish habitat areas.	The broader site contains three mapped <i>low risk</i> waterways and one <i>moderate risk</i> for waterways for waterway barrier works (WWBW) under the recently revised DAF mapping. The <i>low risk</i> WWBW identified will be impacted by the northern part of Precinct 5 and southern parts of Precinct 6. Notably, the proposal avoids the eastern-most portions of this waterway linking to the conservation area where waterway features are more apparent as per the NESS outcomes. The ROL design has been based on the NESS and Context Plan outcomes that reviewed waterway values and respective mapping triggers at that time.

Legislation	Mapping	Purpose	Contemporary Site Relevance
Coastal Hazards (<i>Coastal Protection and Management Act 1995</i>)	Appendix A - Map 15: Coastal Protection Areas Map	The <i>Coastal Protection and Management Act 1995</i> seeks to protect the coastal resources of the coastal zone under State Code 8: Coastal development and tidal works. It establishes a framework for the protection, conservation, rehabilitation and management of the coastal zone with regard to the core objectives of the national strategy for ecologically sustainable development in the use of the Coastal Zone. It also ensures decisions about land use and development safeguard life and property from the threat of coastal hazards.	Not applicable. No areas subject to coastal hazards are mapped within the project site, and the site is not located within a Coastal Management Area.
<i>State Planning Policy 2014</i> (SPP)	Appendix A - Map 11: Matters of State Environmental Significance (Biodiversity)	Provides interim development assessment requirements which ensures that state interests are considered by local government when assessing development applications where the local government planning scheme does not yet integrate the State interests in the SPP. MSES include Biodiversity, Coastal Environment, and Water Quality.	Not applicable. Parts of Precincts 5, 6 & 7 are both mapped as containing several MSES; regulated vegetation (intersecting a watercourse, essential habitat and Category B) and wildlife habitat (Endangered or Vulnerable, and Koala habitat areas – core). Note, regulated vegetation and State Koala provisions do not apply in a PDA and impacts on Koala habitat are being managed by an offset under the EPBC Act.

2.2. Town Planning Instruments

The site is located within the jurisdiction of LCC but not subject to the provisions of the LCC Planning Scheme. Importantly, the site is located within the GFPDA and as such is governed by EDQ. Although being entirely included within the LCC Local Government Area, EDQ have jurisdiction for the implementation and enforcement of development applications in relation to the project as a key regulator of development within a PDA for the DSDI.

2.2.1 Greater Flagstone Priority Development Area

The development proposal occurs within the Greater Flagstone Urban Development Area, declared under the *Urban Land Development Authority Act 2007* (ULDA Act). This legislation superseded the requirements of local government planning provisions (in this case, LCCs *Logan Planning Scheme 2015*) and selective other state legislation (e.g. *Planning Act 2016*, VMA and others).

The Greater Flagstone Urban Development Area Development Scheme was approved in October 2011 and regulates development within the PDA. The Scheme identifies the site within the Urban Living Zone and Greenspace (refer **Figure 3**). The Urban Living Zone applies to most of the area intended for urban development in the PDA and has been rectified under the endorsed Context Plan. The majority of the zone is intended to be developed as neighbourhoods focused on identifiable and accessible centres comprising a mix of residential including houses, multiple residential and other residential and live work opportunities through home-based business.

Development applications referred to EDQ for assessment against the *Greater Flagstone UDA Development Scheme* will be assessed against the EDQ's Implementation Guidelines. Applicable guidelines specifically include Guideline 14 – Environmental Values and Sustainable Resource Use, and Guideline 17 – Remnant Vegetation and Koala Habitat Obligations in Greater Flagstone and Yarrabilba PDAs. In this case, remnant 'Endangered' vegetation will not be impacted, and Koala offsets have been approved under the Federal EPBC Act, therefore, the provisions of Guideline 17 do not apply.

The masterplan development including Precincts 5, 6 and 7, which are areas intended for residential allotments with associated road infrastructure, is shown in **Appendix E**. A significant portion of Precincts 5, 6 and 7 have been deemed conservation area. The vegetation within these areas will be retained within the designated environmental conservation area.

2.3. Aerial History

A review of historical aerial imagery over the Precincts 5, 6 & 7 application areas dating from 1965 to 2003 identifies the periodical changes which have occurred in the local landscape (refer **Plan 1**). General observations include:

- Aerial photography from 1965 shows that the extent of Precincts 5, 6 & 7 were historically cleared of vegetation within the majority of the western extent, with access tracks and fire trails visible within the remaining eastern vegetation in Precinct 7. Of the historically cleared sections, only sparse vegetation and what appears to be regrowth was present.
- Imagery from 1970 shows some areas have remained cleared through the south-western sections of the three precincts with regrowth occurring across the majority of the site. There does not look to be any additional clearing.
- Aerial imagery from 1983 shows regrowth over much of the three precincts however open paddock areas remain intact. Rural-residential development has commenced to the south-west of the broader project site along Greenbank Road and over adjoining properties to the north of the project site. A large infrastructure easement has been cleared to the immediate south.
- Imagery from 2003 shows areas of continued vegetation regrowth across the three precincts. Maintenance of access tracks within the area is visible on this aerial image, with additional access tracks and fire trails evident within the south. Development has commenced within much of the surrounding landscape, with rural residential allotments adjoining the broader project site to the north, east, south and west. The northern extent of the broader project site, abutting Precincts 8 and 10, has been cleared for an infrastructure easement.

1. Review of Historical Aerial Imagery

NOTES
This plan was prepared as a desktop assessment tool. The information on this plan is not suitable for any other purpose. Property dimensions, areas, numbers of lots and contours and other physical features shown have been compiled from existing information and may not have been verified by field survey. These may need verification if the development application is approved and development proceeds, and may change when a full survey is undertaken or in order to comply with development approval conditions. No reliance should be placed on the information on this plan for detailed design or for any financial dealings involving the land. Saunders Havill Group therefore disclaims any liability for any loss or damage whatsoever or howsoever incurred, arising from any party using or relying upon this plan for any purpose other than as a document prepared for the sole purpose of accompanying a development application and which may be subject to alteration beyond the control of the Saunders Havill Group. Unless a development approval states otherwise, this is not an approved plan.

3. Ecological Assessment

Teams of two Ecologists from SHG inspected the Precinct 5, 6 & 7 subject area from the 15-19 August 2022 to confirm ecological values and undertake a full tree-plot survey. In addition, the interface with the conservation area was tree plotted to cadastral survey accuracy in November 2023 to ensure potential impacts are mitigated. The study area has undergone a comprehensive assessment of the terrestrial vertebrate fauna and faunal values of the subject land for inclusion within all previous overall ecological assessments for the Everleigh Project. The broader site assessment has been completed over a number of years, dating from 2015 to contemporary studies for this report in August 2022 and November 2023. Focal areas were selected within the distinct broad vegetation types as defined by the detailed vegetation assessment and certified Property Map of Assessable Vegetation (PMAV).

3.1. Survey Methodology

All historical and contemporary surveys conducted within and adjacent to Precincts 5, 6 & 7 to describe the vegetations communities and fauna are illustrated on **Plan 2**, and include the following techniques:

- General Searches & Species Identification – The site was walked to ensure all vegetation communities and species were recorded and identified. Attention was paid to any threatened species or communities that were listed as possibly occurring on or within the vicinity of the application site and specific micro assemblages which may support these matters.
- PMAV – Each Regional Ecosystem community had been previously accurately surveyed, including producing detailed floristic lists, and checks for any threatened species, or habitat that may support these species. The PMAV process produced accurate data on projected foliage cover and age structure of each vegetation community. Detailed data sheets and GPS markings were recorded within each site using the Queensland Herbarium Map Assessment Request forms. Significant changes from the mapped endangered composite regional ecosystem occurred across the three precincts.
- Observational Survey – During extensive walk overs of the site detailed observational surveys were undertaken of the vertebrate fauna present on, or that may utilise, the study area including fauna lists and significance status of species under the EPBC Act which includes the Japan – Australia Migratory Bird Agreement and the Bonn Convention, as well as Queensland’s NCA.
- SAT –Spot Assessment Techniques (SATs)¹ have been undertaken within the broader site; one in the northern portion of Precinct 6, one in the central regions of Precinct 6 and one in the central regions of Precinct 7.
- Opportunistic Searches – Searches for fauna species throughout Precincts 5, 6 & 7 were conducted incidentally during the tree plot survey. This included generic fauna surveys and species-specific surveys using systematic methods in accordance with the Department of Science Information Technology Innovation and the Arts ‘Terrestrial Vertebrate Fauna Survey Guidelines for Queensland’.

¹ Phillips, S & Callaghan, J 2011, “The Spot Assessment Technique: a tools for determining localised levels of habitat use by Koala *Phascolarctos cinereus*”, *Australian Zoologist*, 35:3.

- Infrared Camera Traps – Motion triggered infrared cameras were utilised in strategic locations to detect fauna activity. Two Motion-sensor cameras was deployed proximal to the Precinct 5 boundary, and another was installed just outside of the north-west corner of the precinct boundary as part of broader site surveys.
- Nocturnal Surveys – Spotlighting and ultrasonic bat detection surveys. As part of broader site surveys, spotlighting over two nights total allowed for checks for nocturnal species', including threatened birds and mammals as well as detailed searches for frog species. Potential flyways and roosting habitat for microbats were systematically surveyed including ultrasonic call detection over two nights.
- Identification of habitat values within the area relevant to terrestrial vertebrate fauna, including hollow-bearing trees, nest sites, rocky outcrops, watercourses, leaf litter, denning or roosting structures and ecological corridors.
- Waterway assessments of mapped VMA watercourses were conducted within the Precincts 5, 6 & 7 works areas as well as the broader subject site. This assessment was in order to determine whether these watercourses contained riparian vegetation or actual waterway values.
- DGPS tree plot of all mature trees (≥ 200 mm DBH) within Precincts 5, 6, & 7 clearing extent and all mature trees (≥ 100 mm DBH) within a 20 m conservation area interface buffer. All trees were concurrently examined for signs of fauna activity, including scats and scratches and/or habitat values.
- Particular attention was paid to any threatened species that were listed as possibly occurring on or within the vicinity of the application area and specific micro-assemblages which may support these threatened species. This included observations for vertebrate fauna present on or that may utilise the study area, including faunal lists and significance status of species under the Commonwealth's EPBC Act including the JAMBA, CAMBA, ROKAMBA and the Bonn Convention, and Queensland's NCA.

2. Field Work Effort

3.2. Waterway Assessments

As mentioned within **Table 2** of this report, one watercourse/drainage feature defined under the VMA as well as a *low risk* waterway for waterway barrier works is currently mapped within the ROL13 impact area. Notably, the proposal avoids the eastern-most portions of this waterway linking to the conservation area where waterway features are more apparent as per the NESS outcomes. The ROL13 design has been based on the NESS and Context Plan outcomes that reviewed waterway values and respective mapping triggers at that time.

Features of the VMA mapped watercourse intersecting the ROL13 impact area were ground-truthed, with areas found to be reminiscent of a constructed drainage channel rather than a natural feature. This is supported by the observation of other constructed drainage channels and eroded drainage lines throughout the site in its entirety. No waterway features were observed during the field survey or specific waterway assessments with large portions of the mapped watercourse lacking a defined channel and existing generally as overland flow. Therefore, works within the ROL13 impact area are not considered to impact upon a defined waterway (refer **Photo set 1**).

Vegetation surrounding the mapped watercourse was largely reflective of composite 'Of Concern' RE 12.3.11/12.3.6 along the eastern portion of the feature and continues through Category X (non-remnant) vegetation as the drainage feature tracks west. An additional feature is mapped adjacent to the boundary of the Precinct 5 impact area of which the developmental footprint does not directly intersect.

Photo set 1: Drainage features present within ROL13

3.3. Vegetation Assessment Results

3.3.1 Flora Observations

Field surveys addressed the relevant desktop analysis conducted at the time of survey. The key findings from the field surveys are as follows:

- The PMST identified fifteen (15) flora species as possibly occurring on site. **No threatened flora species listed under the EPBC Act were recorded within the ROL 13 area during field survey efforts.**
- A Wildlife Online Search listed one (1) protected flora species as possibly occurring on-site. *M. irbyana* have been identified across the broader master planned development area, however no individuals were recorded within the ROL13 impact area. **No threatened flora species listed under the NCA were recorded within the ROL13 impact area during field survey efforts.**
- The PMST identified six (6) TECs as having potential to occur within 5 km of the site. In Queensland, the identified TECs are generally associated with the following Regional Ecosystems:
 - Coastal Swamp Oak (*Casuarina glauca*) Forest of New South Wales and South East Queensland ecological community - RE 12.1.1 and 12.3.20.
 - Coastal Swamp Sclerophyll Forest of New South Wales and South East Queensland – RE 12.2.7, 12.3.4/12.3.4a, 12.3.5, 12.3.6 and 12.3.20.
 - Lowland Rainforest of Subtropical Australia - RE 12.3.1, 12.5.13, 12.8.3, 12.8.4, 12.11.1, 12.11.10, 12.12.1 and 12.12.16.
 - Poplar Box Grassy Woodland on Alluvial Plains – RE 11.3.2, 11.3.17, 11.4.7, 11.4.12 and 12.3.10.
 - Subtropical eucalypt floodplain forest and woodland of the New South Wales North Coast and South East Queensland bioregions – RE 12.3.2, 12.3.2a, 12.3.3, 12.3.3a, 12.3.3b, 12.3.3d, 12.3.4a, 12.3.7, 12.3.7c, 12.3.7d, 12.3.10, 12.3.11, 12.3.11a, 12.3.11b, 12.3.12, 12.3.14a, 12.3.15 and 12.3.19
 - White Box-Yellow Box-Blakely's Red Gum Grassy Woodland and Derived Native Grassland – RE 11.8.2.a, 11.8.8, 11.9.9a, 13.3.1, 13.11.8, 13.12.9 and can also be a component of 11.3.23, 12.8.16, 13.3.4, 13.11.3 and 13.11.4.

No threatened ecological communities were recorded within the ROL13 impact area during field survey efforts.

A total of sixty-five (65) flora species were recorded on-site during field survey efforts. This consisted of thirty-five (35) native species and thirty (30) introduced / weed species (refer **Table 3** and **Table 4**).

Vegetation characteristics within the site (Eucalypt woodland) were observed to be broadly reflective of Koala, Grey-headed Flying Fox habitat. Koala and Grey-headed Flying Fox foraging habitat is being offset under the conditions of the EPBC Act approval, detailed site surveys identified vegetation on-ground to show evidence of historical modification resulting in very few large mature hollow bearing trees being present.

Native flora recorded to be dominant included *Acacia disparrima* (Hickory Wattle), *Allocasuarina littoralis* (Black She-oak), *Corymbia citriodora* (Spotted Gum), *Eucalyptus crebra* (Narrow-leaved Ironbark), *Eucalyptus siderophloia* (Grey Ironbark), *Eucalyptus tereticornis* (Forest Red Gum) and *Lophostemon suaveolens* (Swamp Box) (refer **Table 3**). Seven (7) of the introduced / weed species are listed as restricted matters under the *Biosecurity Act 2014*. Introduced / weed species were recorded largely within the ground and shrub layers within the subject area, and included *Lantana camara* (Lantana), *Sporobolus jacquemontii* (American Rats Tail Grass), *Bidens pilosa* (Cobblers Pegs) and *Bryophyllum delagoense* (Mother of millions) (refer **Table 4**).

Table 3: Native flora species recorded during 2022 survey.

Scientific name	Common name
<i>Acacia concurrens</i>	Black Wattle
<i>Acacia disparrima</i>	Hickory Wattle
<i>Acacia leiocalyx</i>	Early Flowering Black Wattle
<i>Allocasuarina littoralis</i>	Black She-oak
<i>Alphitonia excelsa</i>	Soap Tree
<i>Angophora leiocarpa</i>	Smooth-bark Apple
<i>Aristida calycina</i>	Dark Wiregrass
<i>Cassytha glabella</i>	Devil's Twine
<i>Cheilanthes distans</i>	Bristle Cloak Fern
<i>Chrysocephalum apiculatum</i>	Yellow Buttons
<i>Corymbia citriodora</i>	Spotted Gum
<i>Corymbia intermedia</i>	Pink Bloodwood
<i>Corymbia tessellaris</i>	Moreton Bay Ash
<i>Dianella caerulea</i>	Blueberry Lily
<i>Eragrostis brownii</i>	Brown's Lovegrass
<i>Eremophila debilis</i>	Winter Apple
<i>Eucalyptus crebra</i>	Narrow-leaved Ironbark
<i>Eucalyptus seeana</i>	Narrow-leaved Red Gum
<i>Eucalyptus siderophloia</i>	Grey Ironbark
<i>Eucalyptus tereticornis</i>	Forest Red Gum
<i>Eustrephus latifolius</i>	Wombat Berry
<i>Gahnia aspera</i>	Sword Sedge
<i>Goodenia rotundifolia</i>	Star Goodenia
<i>Imperata cylindrica</i>	Blady Grass
<i>Juncus usitatus</i>	Common Rush
<i>Lobelia purpurascens</i>	White Root
<i>Lomandra longifolia</i>	Mat Rush
<i>Lomandra multiflora</i>	Many-flowered Mat Rush
<i>Lophostemon suaveolens</i>	Swamp Box
<i>Melaleuca quinquenervia</i>	Broad-leaved Paperbark
<i>Melaleuca saligna</i>	Willow Bottlebrush
<i>Melaleuca viminalis</i>	Weeping Bottlebrush
<i>Parsonsia straminea</i>	Monkey Rope Vine
<i>Petalostigma pubescens</i>	Quinine Bush
<i>Themeda triandra</i>	Kangaroo Grass

Table 4: Introduced / weed flora species recorded during 2022 survey.

Scientific Name	Common Name	Weed Restriction Biosecurity Act 2014
<i>Ageratum houstonianum</i>	Blue Billygoat Weed	
<i>Ambrosia artemisiifolia</i>	Annual Ragweed	Category 3 - Restricted
<i>Anagallis arvensis</i>	Scarlet Pimpernel	
<i>Asclepias curassavica</i>	Red-headed Cotton Bush	
<i>Bidens pilosa</i>	Cobblers Pegs	
<i>Bryophyllum delagoense</i>	Mother-of-millions	Category 3 - Restricted
<i>Chloris gayana</i>	Rhodes Grass	
<i>Conyza sumatrensis</i>	Tall Fleabane	
<i>Corymbia torelliana</i>	Cadaghi	
<i>Cyperus polystachyos</i>	Bunchy Sedge	
<i>Desmodium incanum</i>	Creeping Beggarweed	
<i>Emila sonchifolia</i>	Emilia	
<i>Gomphocarpus physocarpus</i>	Balloon Cotton Bush	
<i>Heliotropium amplexicaule</i>	Blue Heliotrope	
<i>Lantana camara</i>	Lantana	Category 3 - Restricted
<i>Lantana montevidensis</i>	Creeping Lantana	Category 3 - Restricted
<i>Macroptilium atropurpureum</i>	Siratiro	
<i>Melinis repens</i>	Red Natal Grass	
<i>Neonotonia wightii</i>	Glycine	
<i>Opuntia stricta</i>	Prickly Pear	Category 3 - Restricted
<i>Oxalis corniculata</i>	Yellow Wood-sorrel	
<i>Paspalum dilatatum</i>	Broad-leaved Paspalum	
<i>Passiflora suberosa</i>	Corky Passion Vine	
<i>Senecio madagascariensis</i>	Fireweed	Category 3 - Restricted
<i>Sida cordifolia</i>	Flannel Weed	
<i>Sida filiformis</i>	Sida	
<i>Solanum mauritianum</i>	Wild Tobacco Tree	
<i>Solanum nigrum</i>	Blackberry Nightshade	
<i>Solanum seaforthianum</i>	Brazilian Nightshade	
<i>Sporobolus jacquemontii</i>	American Rats Tail Grass	Category 3 - Restricted

3.3.2 GPS Tree Plot Survey

A GPS Tree Plot Survey was carried out on-site locating and identifying all trees with a DBH ≥ 100 mm (measured at 1.4 m above ground) across the development impact area and surrounds. Trees meeting these criteria were located within and proximal to the proposed development area. Data for the GPS Tree Plot Survey have been extracted and summarised below. Refer to **Plan 2** for the Tree Plot and **Appendix F** for the Tree Schedule.

- The GPS Tree Plot Survey recorded twenty-five (25) native tree species. **Table 5** provides a summary of the results of the GPS Tree Plot Survey completed across the ROL13 development site and immediate surrounds. A total of 5093 trees including dead stags were recorded within the survey area.
- The dominant species across the subject site was *Corymbia citriodora* (Spotted Gum) with 1179 individuals (23.15%) followed by *Eucalyptus tereticornis* (Forest Red Gum) with 823 individuals (16.16%) and *Lophostemon suaveolens* (Swamp Box) 806 individuals (15.83%).
- **Table 6** provides a summary of the DBH recorded trees of the Tree Plot Survey and shows that 68.06% of trees recorded had a DBH of 300 mm or less, and 88.97% of the trees had a DBH of 400 mm or less. While 1.04% of trees recorded had a DBH of 600 mm or above. This indicates that while a few scattered large trees are present, the vast majority of the vegetation is immature.

Table 5: Tree Plot Summary

Scientific name	Common name	Number recorded	Percentage recorded (%)
<i>Acacia concurrens</i>	Black Wattle	194	3.81
<i>Acacia disparrima</i>	Hickory Wattle	31	0.61
<i>Acacia leiocalyx</i>	Early Flowering Black Wattle	123	2.42
<i>Allocasuarina littoralis</i>	Black She-oak	325	6.38
<i>Alphitonia excelsa</i>	Soap Tree	86	1.69
<i>Angophora leiocarpa</i>	Smooth-barked Apple	68	1.34
<i>Casuarina cunninghamiana</i>	River She-oak	1	0.02
<i>Corymbia citriodora</i>	Spotted Gum	1179	23.15
<i>Corymbia henryi</i>	Large-leaved Spotted Gum	2	0.04
<i>Corymbia intermedia</i>	Pink Bloodwood	169	3.32
<i>Corymbia tessellaris</i>	Moreton Bay Ash	34	0.67
<i>Corymbia trachyphloia</i>	Brown Bloodwood	9	0.18
DEAD/STAG	-	58	1.14
<i>Eucalyptus coolabah</i>	Coolibah	1	0.02
<i>Eucalyptus crebra</i>	Narrow-leaved Ironbark	701	13.76
<i>Eucalyptus seeana</i>	Narrow-leaved Red Gum	138	2.71
<i>Eucalyptus siderophloia</i>	Grey Ironbark	261	5.12
<i>Eucalyptus tereticornis</i>	Forest Red Gum	823	16.16
<i>Lophostemon confertus</i>	Brush Box	1	0.02
<i>Lophostemon suaveolens</i>	Swamp Box	806	15.83
<i>Melaleuca linariifolia</i>	Snow In Summer	14	0.27
<i>Melaleuca nodosa</i>	Prickly-leaved Paperbark	1	0.02

Scientific name	Common name	Number recorded	Percentage recorded (%)
<i>Melaleuca quinquenervia</i>	Broad-leaved Paperbark	62	1.22
<i>Melaleuca saligna</i>	White Bottlebrush	4	0.08
<i>Melaleuca viminalis</i>	Weeping Bottlebrush	1	0.02
<i>Petalostigma pubescens</i>	Quinine Bush	1	0.02
TOTAL:		5093	100

Table 6: Tree Plot DBH Summary

Total DBH (mm)	Number recorded	Percentage recorded (%)
0-100	3	0.06
100-200	1456	28.59
200-300	2007	39.41
300-400	1065	20.91
400-500	397	7.80
500-600	112	2.20
600-700	37	0.73
700-800	7	0.14
800-900	8	0.16
900-1000	1	0.02
Total	5093	100

3.3.3 Regional Ecosystem Observations

Under the VMA, the three Precincts are largely mapped as containing predominately Category X (non-remnant) vegetation (36.1 ha) with areas of Category B (remnant) vegetation (15 ha) within the eastern extent. The Category X (non-remnant) vegetation is present through the central, northern, north-western, and southern portions of the site. There are two composite Category B (remnant) vegetation regional ecosystems mapped on-site. Composite RE12.9-10.2 / 12.9-10.7 is the more dominant of the two and is present over the majority of the mapped Category B (remnant) Of Concern vegetation. This regional ecosystem is mapped through the northern, central and southern sections of the Category B (remnant) polygon. The balance of the Category B vegetation is mapped as RE 12.3.11 / 12.3.6. This regional ecosystem is present along a corridor through the southern Category B polygon (refer **Table 7**).

Table 7: Regional Ecosystem Descriptions

Regional Ecosystem	VMA Status	Description
RE12.9-10.2	Least Concern	<i>Corymbia citriodora</i> subsp. <i>variegata</i> open forest or woodland usually with <i>Eucalyptus crebra</i> . Other species such as <i>Eucalyptus tereticornis</i> , <i>E. moluccana</i> , <i>E. acmenoides</i> and <i>E. siderophloia</i> may be present in scattered patches or in low densities. Understorey can be grassy or shrubby. Shrubby understorey of <i>Lophostemon confertus</i> (whipstick form) often present in northern parts of bioregion. Occurs on Cainozoic and Mesozoic sediments. Not a Wetland. (BVG1M: 10b).
RE12.9-10.7	Of concern	<i>Eucalyptus crebra</i> +/- <i>E. tereticornis</i> , <i>Corymbia tessellaris</i> , <i>Angophora leiocarpa</i> , <i>E. melanophloia</i> woodland. Occurs on Cainozoic and Mesozoic sediments. Not a Wetland.
RE12.3.6	Least Concern	<i>Melaleuca quinquenervia</i> +/- <i>Eucalyptus tereticornis</i> , <i>Lophostemon suaveolens</i> , <i>Corymbia intermedia</i> open forest to woodland with a grassy ground layer dominated by species such as <i>Imperata cylindrica</i> . <i>Eucalyptus tereticornis</i> may be present as an emergent layer. <i>Eucalyptus seeana</i> may also occur in this ecosystem to the south and east of Brisbane. Occurs on Quaternary floodplains and fringing drainage lines in coastal areas. Palustrine. (BVG1M: 22a).

RE12.3.11	Of Concern	<i>Eucalyptus tereticornis</i> +/- <i>E. siderophloia</i> and <i>Corymbia intermedia</i> open forest to woodland. <i>Corymbia tessellaris</i>, <i>Lophostemon suaveolens</i> and <i>Melaleuca quinquenervia</i> frequently occur and often form a low tree layer. Other species present in scattered patches or low densities include <i>Angophora leiocarpa</i>, <i>E. exserta</i>, <i>E. grandis</i>, <i>E. latisinensis</i>, <i>E. tindaliae</i>, <i>E. racemosa</i> and <i>Melaleuca sieberi</i>. <i>Corymbia trachyphloia</i> and/or <i>C. citriodora</i> subsp. <i>variegata</i> may dominate on areas of Pleistocene alluvia. <i>Eucalyptus seeana</i> may be present south of Landsborough and <i>Livistona decora</i> may occur in scattered patches or low densities in the Glenbar SF and Wongi SF areas. Occurs on Quaternary alluvial plains and drainage lines along coastal lowlands. Rainfall usually exceeds 1000mm/y. Contains Palustrine. (BVG1M: 16c).
------------------	------------	---

Remnant Vegetation

Vegetation within the western portion of the ROL13 impact site is mapped as Category B (remnant). This area is predominately mapped as composite 'Of Concern' RE 12.9-10.2/12.9-10.7. As part of the detailed field survey efforts, the vegetation within the RE 12.9-10.2/12.9-10.7 area was assessed and identified as being largely reflective of the mapped regional ecosystems. The vegetation was dominated by *Eucalyptus. siderophloia* (Grey Ironbark), *E. tereticornis* (Forest Red Gum) and *Eucalyptus citriodora* (Spotted Gum). Due to the dominance of *E. citriodora* the area was identified as being more reflective of RE 12.9-10.7 with elements of RE 12.9-10.2. The sub-canopy layer contained species typical of the 9-10 landzone, sedimentary rocks, and included a dense layer of *Acacia leiocalyx* (Early Flowering Black Wattle) with scattered *Allocasuarina littoralis* (Black She-oak) regrowth with scattered *Lophostemon suaveolens* (Swamp Box) and *Alphitonia excelsa* (Soap Tree) (refer **Photo set 2**).

Photo set 2: Mapped Category B (remnant) RE 12.9-10.2 / 12.9-10.7 vegetation characterises

The vegetation within the polygon of composite 'Of Concern' RE 12.3.11/12.3.6 was assessed and identified as being largely reflective of the mapped regional ecosystems. The dominant species within this area included

Eucalyptus tereticornis (Forest Red Gum) and *Melaleuca quinquenervia* (Broad-leaved Paperbark) (refer **Photo set 3**).

Photo set 3: Mapped Category B (remnant) RE 12.3.11 / 12.3.6 vegetation characterises

Non-remnant Vegetation

As part of the detailed field survey efforts, the vegetation within the western portion of the ROL13 mapped as non-remnant vegetation was assessed and identified as being reflective of State mapping. The non-remnant vegetation areas were identified as being dominated by sub-canopy species and juvenile native canopy species. Canopy species within the non-remnant vegetation included scattered mature *Corymbia citriodora* (Spotted Gum), *Eucalyptus tereticornis* (Forest Red Gum), *E. crebra* (Narrow-leaved Ironbark). The subcanopy layer was dominated by *Acacia* species with patches of juvenile *Allocasuarina littoralis* (Black She-oak) regrowth, with die-back and thinning evident throughout.

Areas of native vegetation regrowth are present throughout the mapped Category X (non-remnant) areas (refer Error! Reference source not found.). Disturbance from weed species was observed throughout areas of the remnant and non-remnant vegetation alike. Areas of understorey were observed to lack native vegetation, instead containing patches of *Lantana camara* (Lantana) infestation varying in density.

Photo set 4: Non-remnant vegetation characteristics

3.3.4 Habitat Assessment and Vegetation Communities

The following section discusses the results of the field verification surveys of vegetation communities within the ROL13 impact area. On-ground vegetation characteristics were utilised to delineate vegetation communities. Field surveys identified two (2) vegetation communities within the proposed impact area.

- Eucalypt dominant vegetation – non-remnant
- Eucalypt dominant vegetation – remnant

The site was subject to a PMAV assessment throughout the property resulting with the on-ground vegetation values being mapped. While no changes to the extent of mapped remnant areas across the entirety of the Everleigh site were proposed, the only change was to the status of remnant areas. The site is mapped as both Category X (non-remnant) and Category B (remnant) vegetation of 'Of Concern' status being RE12.-10.7a mapped within the remnant vegetation.

3.4. Fauna Observations

Key findings of the contemporary survey undertaken in 2022 are as follows:

- One (1) Koala sighting was recorded during historical (2015) field survey efforts within the south-eastern corner of the site. Koala (*Phascolarctos cinereus*) is known to occur within the locality of the Everleigh impact site. Impacts on Koala Habitat are being managed by an offset under the EPBC Act (refer EPBC 2016/7817).
- The PMST identified thirty-four (34) fauna species as possibly occurring within the ROL13 impact area. **No other threatened fauna species listed under the EPBC Act were recorded within the ROL13 impact area during the field survey effort.**
- A Wildlife Online Search listed six (6) protected fauna species as possibly occurring on-site, including *Phascolarctos cinereus* (Koala), *Dasyurus maculatus maculatus* (Spotted-tailed quoll), *Petauroides australis australis* (Yellow-bellied Glider), *Adelotus brevis* (Tusked Frog), *Ninox strenua* (Powerful Owl) and *Petauroides volans volans* (Southern Greater Glider). **No other threatened fauna species listed under the NCA were recorded within the ROL13 impact area during field survey efforts.**
- During the 2022 field survey effort twenty-three (23) fauna species were recorded throughout the ROL13 impact area. All those identified were common and highly urbanised fauna and avifauna typical of highly modified environments. No fauna species listed under Commonwealth legislation or protected under the NCA were observed during the contemporary field survey (refer **Table 8**).

Table 8: Recorded fauna species (2022 survey)

Scientific name	Common name
Birds	
<i>Anas superciliosa</i>	Pacific Black Duck
<i>Cacatua galerita</i>	Sulphur-crested Cockatoo
<i>Centropus phasianinus</i>	Pheasant Coucal
<i>Coracina novaehollandiae</i>	Black-faced Cuckoo-shrike
<i>Corvus orru</i>	Torresian Crow
<i>Cracticus nigrogularis</i>	Pied Butcherbird
<i>Dacelo novaeguineae</i>	Laughing Kookaburra
<i>Entomyzon cyanotis</i>	Blue-faced Honeyeater
<i>Gymnorhina tibicen</i>	Australian Magpie
<i>Hirundo neoxena</i>	Welcome Swallow
<i>Macropygia amboinensis</i>	Brown Cuckoo-Dove
<i>Manorina melanocephala</i>	Noisy Miner
<i>Oriolus sagittatus</i>	Olive-backed Oriole
<i>Pardalotus striatus</i>	Striated Pardalote
<i>Philemon corniculatus</i>	Noisy Friarbird
<i>Platycerus adscitus</i>	Pale-headed Rosella

Scientific name	Common name
<i>Rhipidura leucophrys</i>	Willie Wagtail
Mammals	
<i>Canis lupus familiaris</i>	Wild dog
<i>Lepus europaeus</i>	Hare
<i>Macropus gigantus</i>	Eastern Grey Kangaroo
<i>Macropus rufogriseus</i>	Red-necked Wallaby
Reptiles	
<i>Lampropholis delicata</i>	Grass Skink
Amphibian	
<i>Rhinella marina</i>	Cane Toad

3.4.1 Threats and Barriers to Fauna Movement

The ROL13 impact area is located within the eastern extent of the Everleigh impact area. This precinct adjoins the planned Conservation Area which spans the eastern extent of the Everleigh residential development. Current barriers to fauna movement within the locality of ROL13 include already present residential development to the north-west and west, however unimpeded movement to the north-east, east and south is extant. More broadly large lot residential development is present to the north, south-east and south of the Everleigh residential development, as well as Wearing Park bound by low density residential and Mount Lindesay Highway to the east.

3.4.2 Threatened Fauna Assessment

The EPBC protected matters search identified thirty-four (34) threatened fauna species as potentially occurring within the ROL13 impact area. The Nature Conservation (Animals) Regulation 2020 (NCAR) lists six (6) threatened fauna species as possibly occurring within five (5) kilometres of the application site.

Historically, one (1) fauna species listed as threatened under the EPBC Act and/or NCA have been observed across the Everleigh residential development site, including *Phascolarctos cinereus* (Koala). Impacts on Koala Habitat and Grey-headed Flying-fox foraging habitat are being offset under the conditions of the EPBC Act approval. Potential for additional threatened species to occur is discussed in detail below.

Glossy Black Cockatoo (*Calyptorhynchus lathami lathami*)

The Glossy Black Cockatoo relies on two specific habitat types for foraging and breeding. Foraging habitat is defined as vegetation containing Casuarina or Allocasuarina species. In South-east Queensland these are usually *Allocasuarina littoralis* (Black She-oak) and *Allocasuarina tortulosa* (Forest She-oak). The species is known to be having highly selective of feed tree species as well as preference for individual trees and the size, weight and number of cones a tree produces, due to these traits a large stand of trees is desirable for foraging. Breeding habitat is understood to be equally selective with a preference for specific hollow characteristics, notably a minimum entrance diameter >15cm².

² "Conservation Advice for *Calyptorhynchus lathami lathami* (South-eastern Glossy Black Cockatoo)", Department of Climate Change, Energy, the Environment and Water.

A GPS tree plot of all mature trees (>100 mm DBH) was conducted across the entirety of the ROL13 impact area. A total of three-hundred and twenty-five (325) individual *Allocasuarina littoralis* (Black She-oak) trees were recorded, which represent 6.38% of the total vegetation observed (refer **Section 3.3.2**). All trees were concurrently examined for signs of fauna activity, including scats and scratches and/or habitat values. Additionally, a total of eighteen (18) hollows were recorded across the ROL13 impact area, eleven (11) small and seven (7) large hollows, nine (9) of which were identified within dead/stage trees.

Areas of the site do contain relatively intact eucalypt woodland which is dominated by *Eucalyptus siderophloia* (Grey Ironbark), *Eucalyptus tereticornis* (Forest Red Gum) and *Eucalyptus citriodora* (Spotted Gum). These species are consistent with 'Of Concern' RE 12.9-10.7a. The sub-canopy layer contained species typical of the 9-10 landzone, sedimentary rocks, and included *Acacia leiocalyx* (Early Flowering Black Wattle) and *Allocasuarina littoralis* (Black She-oak) regrowth with scattered *Lophostemon suaveolens* (Swamp Box) and *Alphitonia excelsa* (Soap Tree). While certain areas of dense undergrowth were noted particularly within the Category B (remnant) areas, the sub-canopy was observed as being relatively disturbed. Disturbance from weed species was observed throughout areas of the remnant and non-remnant vegetation alike. Areas of understorey were observed to lack native vegetation, instead containing patches of *Lantana camara* (Lantana) infestation.

Glossy Black Cockatoo are highly selective of individual food trees and require a stand of *Allocasuarina*. The largely modified and scattered nature of the foraging species, results in an unlikely ability to provide adequate foraging habitat for the species. While multiple observations of the species within 5 km of the impact site have been recorded on the Atlas of Living Australia (ALA) website, only three (3) of these have been within the last ten years and no sightings have been recorded within the impact site. Glossy Black Cockatoo is known to occur within White Rock Conservation Park where the ample availability of large areas for foraging habitat is present suggesting the reason why records of the species are lacking from the development area is the lack of available habitat. Additionally, a total of eighteen (18) hollows were recorded across the ROL13 impact area, eleven (11) small and seven (7) large hollows, nine (9) of which were identified within dead/stage trees. These features were recorded during the tree plot surveys as containing potentially suitable hollows for breeding across the ROL13 impact area (refer **Section 3.3.2**). Additionally, on the extensive field surveys that have occurred throughout the Everleigh residential development, no evidence the species utilises the ROL impact site has been recorded.

The vegetation throughout ROL13 is considered to lack foraging and breeding habitat for this species. It is considered highly unlikely Glossy Black Cockatoo would utilise this vegetation.

No sightings of Glossy Black Cockatoo were recorded within the site during the field survey effort.

Greater Glider (*Petauroides volans*)

The Greater Glider is restricted to eucalypt forests and woodlands of eastern Australia. It is typically found in highest abundance in taller, montane, moist eucalypt forests on fertile soils, with relatively old trees and

abundant hollows associated with Category B (remnant) vegetation. While the site does contain mapped Category B (remnant) vegetation of eucalypt dominated communities it lacks the mature habitat trees required to support Greater Glider.

A GPS tree plot of all mature trees (>100 mm DBH) was conducted across the entirety of the ROL13 impact area. All trees were concurrently examined for signs of fauna activity, including scats and scratches and/or habitat values. Areas of the site do contain relatively intact eucalypt woodland which is dominated by *Eucalyptus siderophloia* (Grey Ironbark), *Eucalyptus tereticornis* (Forest Red Gum) and *Eucalyptus citriodora* (Spotted Gum). These species are consistent with 'Of Concern' RE 12.9-10.7a. Additionally, a total of eighteen (18) hollows were recorded across the ROL13 impact area, eleven (11) small and seven (7) large hollows, nine (9) of which were identified within dead/stage trees. These features were recorded during the tree plot surveys as containing potentially suitable hollows for breeding across the ROL13 impact area (refer **Section 3.3.2**). This represents approximately 0.3 hollows per hectare to be impacted which is well below the 2-4 hollows per hectare required by the species. Targeted spotlighting surveys failed to locate the species on-site (refer **Plan 2** and **Section 3.4**).

As stated in the Conservation Advice for *Petauroides volans* (Greater Glider (southern and central)) 2022, the species is particularly sensitive to disturbance associated with forest clearance and fragmentation and individuals disperse poorly. The site is located in a landscape that is currently under construction has been subject to modification for development resulting in a mixture of undisturbed and highly disturbed environments. The site lacks suitable habitat for the species and is located adjacent to highly modified areas.

Six (6) occurrence records of Greater Glider sightings have been recorded on the ALA database within 5 km of the site, of which two (2) the date of the sighting was not specified, one (1) was in 1994, and three (3) were between 2017 and 2023. Please note the six (6) sightings within 5 km of the Precinct 11 site exclude data points with location uncertainty, absence records, unverified records, duplicate records and unresolved user annotations. All recent sightings (2017 – present) are associated with vegetation located within the Greenbank Training Area which contains much more mature vegetation than the surrounding landscape. No sightings of the species have been recorded within the development site. Considering all of the above and the scale of development that has already occurred in the approved project area adjoining ROL13 it is considered unlikely Greater Glider utilise the site.

No observations of Greater Glider were recorded within the site during the survey effort.

Yellow-bellied Glider

The Yellow-bellied Glider occurs in tall mature eucalypt forest and den, often in family groups, in hollows of large trees usually more than one metre in diameter. The species is very mobile and occupy large home ranges between 20 to 85 ha to encompass dispersed and seasonally variable food resources.

A GPS tree plot of all mature trees (>100 mm DBH) was conducted across the entirety of the ROL13 impact area. All trees were concurrently examined for signs of fauna activity, including scats and scratches and/or habitat values. Areas of the site do contain relatively intact eucalypt woodland which is dominated by *Eucalyptus siderophloia* (Grey Ironbark), *Eucalyptus tereticornis* (Forest Red Gum) and *Eucalyptus citriodora*

(Spotted Gum). These species are consistent with 'Of Concern' RE 12.9-10.7a. Additionally, a total of eighteen (18) hollows were recorded across the ROL13 impact area, eleven (11) small and seven (7) large hollows, nine (9) of which were identified within dead/stage trees. These features were recorded during the tree plot surveys as containing potentially suitable hollows for breeding across the ROL13 impact area (refer **Section 3.3.2**). This represents approximately 0.3 hollows per hectare to be impacted which is well below the 2-4 hollows per hectare required by the species. Targeted spotlighting surveys failed to locate the species on-site (refer **Plan 2** and **Section 3.4**).

The site is located in a landscape that is currently under construction has been subject to modification for development resulting in a mixture of undisturbed and highly disturbed environments. The site lacks suitable habitat for the species and is located adjacent to highly modified areas. While there are five (5) recorded sightings with 5 km of the ROL13 impact site, one (1) does not have a date specified, two (2) sightings were recorded to the north of the site associated with vegetation within the Greenbank Training Area Range Control in 2012 and two (2) sightings were recorded to the south-west of the impact site in 2021 within large lot residential properties. The species was not observed within the site despite multiple targeted searches. Evidence of the species in the form of characteristic V-shaped cuts were also not observed during detailed individual tree surveys. Considering all of the above and the scale of development that has already occurred in the approved project area adjoining ROL13 it is considered unlikely Yellow-bellied Glider utilise the site.

No sightings of Yellow-bellied Glider were recorded within the site during the survey effort.

Powerful Owl

The Powerful Owl is the largest owl species in Australia. They usually roost in tall densely vegetated trees within moist forests of eastern Australia. Powerful Owls are active predators, feeding mainly on medium-sized marsupials such as gliders and possums.

The site is located in a landscape that is currently under construction has been subject to modification for development resulting in a mixture of undisturbed and highly disturbed environments. The site lacks optimal habitat for the species and is located adjacent to highly modified areas. While six (6) sightings have been recorded via the ALA database, five (5) of these have been within large lot residential properties to the east, south and south-west of the impact site, with another immediately north-west of the Everleigh development between 2011 and 2016. In the unlikely event the species does utilise the vegetation within the site, the Conservation Area included as part of the approved Everleigh residential development is to be retained. Considering the extensive field survey efforts and the scale of development that has already occurred in the approved project area adjoining ROL13 it is considered unlikely Powerful Owl utilise the site.

No sightings of Powerful Owl were recorded within the site during the survey effort.

4. Natural Environment Site Strategy

The NESS was prepared for Mirvac by SHG in 2017 in accordance with PDA Guidelines 14 and 17 and relied upon detailed ecological surveys and assessments. The NESS was endorsed by EDQ upon approval of the MCU. The areas containing applicable biodiversity values relevant to the ROL13 impact area are illustrated in Error! Reference source not found..

4.1. Criteria

The NESS criteria are assessed further below for the ROL13 application:

- **Survey, Identification, Reporting and Management** – a significant biodiversity assessment is required to be developed for each development stage that potentially impacts on identified significant biodiversity values. Field surveys (contemporary and historical) have been conducted to identify the Significant Biodiversity Values within the ROL13 impact area.
- **Confirmed Areas of Remnant Vegetation Containing Endangered Regional Ecosystems** – while remnant vegetation is present within the ROL13 impact area, there is no confirmed areas of remnant vegetation containing an 'Endangered' regional ecosystem. Confirmed areas of remnant vegetation containing an 'Endangered' regional ecosystem adjoins the ROL13 impact area which have been mapped as containing Significant Biodiversity Values. The impact to the surrounding areas will be mitigated through the management measures outlined in supporting documentation.
- **Other Vegetation** – there will be some removal of remnant vegetation of 'Of Concern' status within the ROL13 impact area. All clearing of native vegetation will be managed through the implementation of a Vegetation Clearing & Fauna Management Plan (VCFMP).
- **Koala** – the removal of Koala habitat is being compensated through a Federal offset.
- **Extinct, Critically Endangered, Endangered, Vulnerable and/or Near Threatened Species** – a VCFMP will be implemented to manage fauna during the clearing phases. Historically two (2) EVNT have been recorded across the entire Everleigh development site, however during the recent field survey effort no EVNT species were recorded within the boundaries of the ROL13 impact area.
- **Native Fauna (non-EVNT)** – a VCFMP will be implemented to manage fauna during the clearing phases.
- **Waterways & Drainage Features** – one (1) mapped watercourse under the VMA as well as a *low risk* waterway for waterway barrier works under the *Fisheries Act* is mapped across the ROL13 impact area. However, this feature was identified as a drainage line and does not meet the requirements of a Significant Biodiversity Value. The ROL design has been based on the NESS and Context Plan outcomes that reviewed waterway values and respective mapping triggers at that time. The impact to the surrounding areas will be mitigated through the management measures outlined in supporting documentation.
- **Land Degradation** – an Erosion and Sediment Control Plan will be implemented to manage impacts from clearing and landscaping and potential deposition of erosion.
- **Pest and Weed species** – on-site rehabilitation includes the removal of weed and pest species. This element will be monitored, measured and managed throughout the course of the project.
- **Monitoring, Management Plans & Reporting** – A VCFMP is provided with this application.

4.2. Natural Environmental Features

As defined by the NESS, the ROL13 impact area contains the following natural features (refer Error! Reference source not found.):

- Low order remnant vegetation;
- Areas of juvenile native vegetation;
- Other Drainage Features and Watercourses.

Areas of juvenile native vegetation, other drainage features and watercourses and low order remnant vegetation are not identified as Significant Biodiversity Values under the NESS and are instead deemed Other Biodiversity Values. As these are not identified as Significant Biodiversity Values under the NESS, they do not warrant a further response to PDA Guideline 14.

3. NESS Constraints Plan

NOTES
This plan was prepared as a desktop assessment tool. The information on this plan is not suitable for any other purpose. Property dimensions, areas, numbers of lots and contours and other physical features shown have been compiled from existing information and may not have been verified by field survey. These may need verification if the development application is approved and development proceeds, and may change when a full survey is undertaken or in order to comply with development approval conditions. No reliance should be placed on the information on this plan for detailed design or for any financial dealings involving the land. Saunders Havill Group therefore disclaims any liability for any loss or damage whatsoever or howsoever incurred, arising from any party using or relying upon this plan for any purpose other than as a document prepared for the sole purpose of accompanying a development application and which may be subject to alteration beyond the control of the Saunders Havill Group. Unless a development approval states otherwise, this is not an approved plan.

*This note is an integral part of this plan/data. Reproduction of this plan or any part of it without this note being included in full will render the information shown on such reproduction invalid and not suitable for use.

- Legend**
- Project site
 - Precinct 5-7 (ROL13) Boundary
 - Precinct 5-7 (ROL13) bulk earthworks clearing area
- Significant Biodiversity Values**
- Confirmed Areas of Remnant Vegetation Containing Endangered Regional Ecosystems**
Areas proposed and confirmed through Property Map of Assessable Vegetation application as retaining remnant vegetation of an Endangered Regional Ecosystem type (82.49 hectares)
- Confirmed Waterway Areas**
Areas confirmed through field survey. As retaining features consistent with a watercourse within the extent of the Project Site (3.43 hectares)
- Other Biodiversity Values**
- Low Order Remnant Vegetation**
Of Concern and Least Concern Regional Ecosystem type areas (125.97 hectares)
- Waterway Buffer Areas**
Areas of preferred buffer extent to Project Site watercourses (13.71 hectares)
- Other Drainage Features & Watercourses**
Areas within the site conveying current hydrology flow paths - varying quality (0.39 hectares)
- Project Site Farm Dams**
Locations of artificially created farm dams (6.84 hectares)
- Areas of Juvenile Native Vegetation**
Areas of Project Site retaining varying degrees of native regeneration vegetation (154.0 hectares)

Issue	Date	Description	Drawn	Checked
A	22/03/2024	Preliminary	TC	KR

5. PDA Guideline 14 response

As highlighted within the previous section, the ROL13 impact area does not include areas identified as having Significant Biodiversity Values under the NESS. For clarity, an additional response to criteria illustrated within Guideline 14 is provided in **Table 9**.

Table 9: Response to PDA Guideline 14

Values	Strategies	Comments
1. Significant terrestrial biodiversity values Areas of significant biodiversity value may include: ▪ Land mapped in the applicable PDA development scheme as having significant biodiversity values ▪ Mapped biodiversity corridors identified in the applicable PDA development scheme ▪ Other areas of significance identified in the applicable PDA development scheme ▪ Viable areas of remnant vegetation containing endangered regional ecosystems as defined in Appendix 1 ▪ Listed threatened species habitat	Identify significant terrestrial biodiversity values within and adjoining the development area by undertaking: ▪ Robust field surveys ▪ Desktop assessments using local, state and commonwealth environment databases and mapping searches Demonstrate how the development minimises impacts on significant biodiversity values by minimising vegetation clearing generally within the area and by specifically: ▪ Retaining and enhancing areas of viable remnant vegetation containing endangered regional ecosystems as defined in Appendix 1 ▪ Avoiding, minimising or off-setting the clearing of non-viable remnant vegetation containing endangered regional ecosystems as defined in Appendix 1 ▪ Minimising the clearing of remnant and regulated regrowth vegetation within the area ▪ Providing adequate buffers between development and any identified significant biodiversity value within or adjoining the development site ▪ Providing management plans to reduce and control clearing and manage other development and construction impacts in the area.	The project areas and surrounding broader site has been subject to both desktop and on ground ecological assessments by SHG to identify existing ecological values at the site. The results of which have been summarised for the ROL13 application areas in this SBAR. Desktop reporting was undertaken to inform on ground ecological surveys which included ground truthing flora, fauna, habitat and waterway field assessments over the ROL13 project extent. Robust ecological surveys were undertaken in accordance with Commonwealth and State survey guidelines and best practice methods. Targeted flora and fauna surveys were undertaken specifically to identify the potential presence of threatened species and locate ecologically significant areas. The results have been used to describe various on-site habitat and vegetation characteristics. As discussed in this SBAR, there are no areas within the Precincts 5, 6 & 7 works extent areas that meet the Guideline 14 definition of a significant biodiversity value (including as identified under the NESS). Therefore, the proposal does not involve the removal of areas identified as having significant biodiversity values. A GPS tree plot of the entire impact area was undertaken to determine the habitat values for hollow dependent species and to provide data on species composition of the impacted vegetation. The results have been used to describe various on-site habitat and vegetation characteristics. As discussed in this SBAR, there are no areas within the ROL13 works extent that meet the Guideline 14

Values	Strategies	Comments
		definition of a significant biodiversity value (including as identified under the NESS). Therefore, the proposal does not involve the removal of areas identified as having significant biodiversity values. The proposed ROL13 development footprint does not contain any areas of ground-truthed viable 'Endangered' vegetation. The ROL13 impact area has been subject to certified PMAVs, which identify the area as containing partly Category X (non-remnant) and partly 'Of Concern' Category B (remnant) vegetation. Only viable Remnant 'Endangered' vegetation is identified as significant under Guideline 14. The removal of the area of Category B (remnant) 'Of Concern' vegetation throughout the western sections of the ROL13 impact area is to occur as a result of the works. The balance of the impact footprint consists of areas of Juvenile Native vegetation present in the western portion. The removal of vegetation has been minimised and a VCFMP to manage clearing has been developed and included with this application. Impacts from the development planned for the ROL13 footprint are to be negated through mitigation measures outlined in supporting documents. The entire project site, and immediate surrounding area within the PDA is zoned as Urban Living. This zone has been strategically identified as containing areas suitable for urban development to minimise impacts on landscape scale significant biodiversity values. Field surveys have identified individual specimens of <i>Melaleuca irbyana</i> (<i>M. irbyana</i>) within the broader project site, however no specimens were found within the ROL13 works areas. As

Values	Strategies	Comments
		<i>M. irbyana</i> were identified to be present in the broader project site, a Protected Plants Clearing Permit to manage <i>M. irbyana</i> across the broader urban development extent for Everleigh has been granted by the Department of Environment and Science (Appendix D). This permit included the establishment of a 5,000 m² <i>M. irbyana</i> thicket secured as a Category A area as an offset. Therefore the <i>M. irbyana</i> specimens identified within the broader site area are permitted to be cleared.
2. Ecological connectivity	- Identify priority vegetation patches, fauna habitat features and fauna movement corridors in and beyond the application site through detailed site assessments completed in accordance with the relevant local government authority guidelines or planning scheme policies for ecological assessment - Retain vegetation connections between priority vegetation patches, fauna habitat features and fauna linkages to ensure ecological connectivity is maintained or enhanced - Minimise locating major infrastructure through identified corridor linkages - Undertake strategic rehabilitation of degraded land where required to improve or create functioning corridors.	Ecological assessments completed by SHG in accordance with Guideline 14 requirements have been conducted across the entire project extent including the adjoining bushland situated east of the proposed development. This bushland is designated as Conservation Parkland. The vegetation within the ROL13 impact area was not observed to contribute to a fauna movement corridor, nor identified as a suitable linkage corridor Within the ROL13 works boundary, and within the broader project extent, evidence of Koala was found in the form of scats with direct observations of individuals in earlier surveys. Thermal imagery surveys of surrounding areas for previous stages of works have recorded Koalas within the vicinity of the ROL13 clearing area. Thermal imagery surveys are to be conducted prior to each stage of clearing. Across the broader project area, the proposed on-site rehabilitation directly adjoins the Conservation Parkland and will ensure continued connectivity between the retained waterway corridor in the broader project area and the Conservation Parkland. The bushland retains connectivity to the east along Norris Creek (high risk waterway for WWBW), however, does not connect to any significant State-wide corridors. Connectivity is limited north and south by easements and

Values	Strategies	Comments
		west by the presence of roads and on-going residential developments. The ROL13 footprint does not contain areas of ground-truthed viable Category B (remnant) 'Endangered' vegetation, rather, the precinct is located within areas of partly Category X (non-remnant) and Category B (remnant) 'Of Concern' vegetation. These are not considered to be significant biodiversity values under Guideline 14.
3. Sustainable landscaping practices	▪ Incorporate biodiversity friendly landscape principles and practices such as retaining habitat trees in road reserves and opens space areas ▪ Maximise use of locally occurring native species in landscaping ▪ Identified opportunities for revegetation and rehabilitation along waterways and biodiversity corridors	Sustainable landscape principles and practices will be incorporated within the development area under the proposal. These will include plantings from a localised native species pallet.
4. Bushfire risk management	▪ Ensure significant biodiversity values are protected from exempt clearing by ensuring new built infrastructure is adequately set back from identified biodiversity areas ▪ Where a firebreak is required to protect new infrastructure ensure clearing associated with the firebreaks is located external to significant biodiversity areas.	A Bushfire Management Plan has been addressed separately. Due to the proposed development and post-development vegetation settings, bushfire is not considered to pose a risk to the retained vegetation on the site, nor to the proposed development.

Values	Strategies	Comments
1. Wetlands	▪ Identify and accurately map the extent of, and describe the values for, any identified wetlands of	SARA Wetland Protection Area mapping and SPP MSES mapping does not identify protected wetlands within or adjacent to the proposal area.

Values	Strategies	Comments
	high ecological significance and referrable wetlands ▪ Provide adequate buffers between development and wetlands that are in and adjacent to the PDA (where feasible incorporate open space, storm water treatment or fauna corridors within wetland buffers) ▪ Where a wetland of high ecological significance occurs, a minimum buffer of 50 metres between the development proposal and the wetland is recommended	Surveys by SHG confirmed that no natural wetland values were identified across the site.
2. Waterways	▪ Identify and accurately map waterways in accordance with DES' stream order hierarchy (1-5). ▪ Determine existing and proposed waterway values of site stream orders (e.g. Intact remnant vegetation, riparian values, fauna connectivity, natural water quality function, watercourse stability) ▪ Retain waterways in their undisturbed condition by minimising disturbance to natural drainage. Where this is not proposed provide a detailed waterway assessment report justifying encroachment or removal of waterway areas. ▪ Provide adequate buffers between development and retained waterways to provide waterway protection including temperature, bank stability, light, aquatic habitat, terrestrial habitat. ▪ Where waterways have been designated or identified to provide dual use (fauna corridor,	While one (1) mapped waterway feature was identified within the ROL13 impact area, this waterway was identified as a drainage line and does not meet the Significant Biodiversity Value criteria. The impact to the surrounding areas will be mitigated through the management measures outlined in supporting documentation. Therefore, consistent with the higher-level NESS, surveys by SHG confirmed that no waterway features are present within the ROL13 works boundary.

Values	Strategies	Comments
	open space connection, stormwater conveyance) provide additional buffer setback.	
3. Water Quality	- Water discharge to on-site and adjacent water systems (freshwater, estuarine and marine) must meet water quality standards under current Queensland legislation. - Soil disturbance must be managed to avoid associated contaminants entering adjacent water systems. - Identify nutrient hazard areas and appropriately manage soil and groundwater disturbance to avoid or minimise nutrient mobilisation that may increase the risk of coastal algal blooms. - Avoid or minimise waste water discharge from the site in accordance with a waste water management plan prepared by a suitably qualified person. - Avoid areas with highly permeable soils or a high water table when locating waste disposal activities or facilities. - Provide adequate buffers for water quality between development and retained waterways.	Stormwater Management and Erosion and Sediment Control Plans will be prepared as part of this application and will manage and minimise potential impacts on mapped waterways lower in the catchment.

6. Conclusions

This SBAR was prepared on behalf of Mirvac Queensland Pty Ltd to determine the potential environmental impacts associated with ROL13 within the masterplan development located at Everleigh, Teviot Road, Greenbank. This report provides a contemporary review of the ecological values across Precincts 5, 6 & 7 and the wider Everleigh master-planned area, identified through desktop analysis and field survey, in accordance with Commonwealth, State and Local Government Legislation in support of the ROL application to EDQ.

Overall, the following conclusions can be made:

- The ROL13 application areas do not contain natural features that meet the Significant Biodiversity Value classification.
- This combined Precinct 5, 6 & 7 application is considered compliant with the criteria of the higher level endorsed NESS.
- No threatened species nor communities listed under the NCA or EPBC Act were observed during the contemporary field survey effort.

7. Recommendations

7.1. Management and Compensatory Measures

A number of management and compensatory measures are proposed to minimise and offset impacts associated with the development. These measures are discussed in the following subsection.

7.1.1 Vegetation Clearing and Fauna Management Plan

The subsequent VCFMP forms part of the broader management document submitted.

The VCFMP covers clearing of all vegetation listed in this report and includes details on:

- trees marked for removal;
- all civil works likely to impact existing vegetation;
- temporary and permanent exclusion and protection fencing;
- roles and responsibilities for site contractors, the developer and the consultant group;
- stockpiling and site access locations;
- a clearing sequence plan showing the commencement of clearing and direction of removal to allow for the appropriate flushing of fauna towards safe havens;
- fauna species surveyed as using the site, focusing on those most likely impacted by development works;
- a list of relevant State and Commonwealth legislation constraints and controls for fauna potentially affected by development works;
- a plan showing existing habitat opportunities and locations;
- details of the threats to existing fauna species;
- management and mitigation measures – i.e. temporary use of fauna exclusion fencing;
- description of fauna spotter role, contacts and certification;
- specific fauna management procedures for potential or known habitat trees;
- links to weed management and revegetation proposals; and
- stock piling and reuse of cleared vegetation.

1. Federal Matters of National Environmental Significance		
A Protected Matters Report was generated from the environment.gov.au website and returned the following results. These matters may occur within a 5 km radius of the site and are protected under the <i>Environment Protection and Biodiversity Conservation Act 1999</i> .		
World Heritage Properties:	None	
National Heritage Places:	None	
Wetlands of International Importance:	1	
Great Barrier Reef Marine Park:	None	
Commonwealth Marine Area:	None	
Listed Threatened Ecological Communities:	6	
Listed Threatened Species:	49	
Listed Migratory Species:	16	

2. State Matters		
2.1 Nature Conservation Act 1992 and subordinate legislation		
Protected Plants Flora Survey Trigger Map	Partially within high risk area	
2.2 Vegetation Management Act 1999 and subordinate legislation		
Regulated Vegetation Management Map and Vegetation Management Supporting Map		

Regional Ecosystem	VMA status
12.9-10.2 / 12.9-10.7	Of concern
12.3.11 / 12.3.6	Of concern
Non-remnant	None
Essential Habitat	<i>Crinia tinnula</i> (Wallum Froglet) <i>Phascolarctos cinereus</i> (Koala) <i>Calyptorhynchus lathami</i> (Glossy Black-cockatoo) <i>Dasyurus maculatus maculatus</i> (Spotted-tailed Quoll) <i>Ninox strenua</i> (Powerful Owl)
Wetland/s	Watercourse and/or Drainage Features present
Bioregion	Coastal bioregions and sub-regions

2.3 Koala habitat values and development areas (superseded)

Koala (SPP May 2010)	Medium value bushland Low value bushland Medium value rehabilitation Low value rehabilitation
Assessable Development Area Koala Habitat Values (SPRP May 2010)	Outside of assessable development areas

2.4 Koala priority area and koala habitat areas

Koala Priority Area (KPA)	Not within KPA
Koala Habitat Area	Koala Habitat Area (core)

2.5 State Planning Policy Interactive Mapping System (selected environmental matters)

SPP — Biodiversity	MSES – Protected areas (nature refuge) MSES – Wildlife habitat (endangered or vulnerable) MSES – Wildlife habitat (koala habitat areas – core) MSES – Regulated vegetation (category B) MSES – Regulated vegetation (category C) MSES – Regulated vegetation (essential habitat) MSES – Regulated vegetation (intersecting a watercourse)
SPP — Coastal Environment	Not within coastal management district
SPP — Water Quality	Does not apply
SPP — Natural Hazards Risk and Resilience	Flood hazard area - Local Government flood mapping area Bushfire prone area High Potential Bushfire Intensity

Medium Potential Bushfire Intensity
Potential Impact Buffer

Summary

Matters of National Environment Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the [Administrative Guidelines on Significance](#).

World Heritage Properties:	None
National Heritage Places:	None
Wetlands of International Importance (Ramsar	1
Great Barrier Reef Marine Park:	None
Commonwealth Marine Area:	None
Listed Threatened Ecological Communities:	6
Listed Threatened Species:	49
Listed Migratory Species:	16

Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at <https://www.dcceew.gov.au/parks-heritage/heritage>

A [permit](#) may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

Commonwealth Lands:	None
Commonwealth Heritage Places:	None
Listed Marine Species:	23
Whales and Other Cetaceans:	None
Critical Habitats:	None
Commonwealth Reserves Terrestrial:	None
Australian Marine Parks:	None
Habitat Critical to the Survival of Marine Turtles:	None

Extra Information

This part of the report provides information that may also be relevant to the area you have

State and Territory Reserves:	2
Regional Forest Agreements:	None

Details

Matters of National Environmental Significance

Wetlands of International Importance (Ramsar Wetlands)		[Resource Information]
Ramsar Site Name	Proximity	
Moreton bay	20 - 30km upstream from Ramsar site	

Listed Threatened Ecological Communities	[Resource Information]
For threatened ecological communities where the distribution is well known, maps are derived from recovery plans, State vegetation maps, remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.	
Status of Vulnerable, Disallowed and Ineligible are not MNES under the EPBC Act.	

Community Name	Threatened Category	Presence Text
Coastal Swamp Oak (Casuarina glauca) Forest of New South Wales and South East Queensland ecological community	Endangered	Community may occur within area
Coastal Swamp Sclerophyll Forest of New South Wales and South East Queensland	Endangered	Community may occur within area
Lowland Rainforest of Subtropical Australia	Critically Endangered	Community may occur within area
Poplar Box Grassy Woodland on Alluvial Plains	Endangered	Community may occur within area
Subtropical eucalypt floodplain forest and woodland of the New South Wales North Coast and South East Queensland bioregions	Endangered	Community likely to occur within area
White Box-Yellow Box-Blakely's Red Gum Grassy Woodland and Derived Native Grassland	Critically Endangered	Community may occur within area

Listed Threatened Species	[<u>Resource Information</u>]	
Status of Conservation Dependent and Extinct are not MNES under the EPBC Act.		
Number is the current name ID.		
Scientific Name	Threatened Category	Presence Text
BIRD		

Scientific Name	Threatened Category	Presence Text
Anthochaera phrygia Regent Honeyeater [82338]	Critically Endangered	Foraging, feeding or related behaviour likely to occur within area
Botaurus poiciloptilus Australasian Bittern [1001]	Endangered	Species or species habitat likely to occur within area
Calidris acuminata Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat may occur within area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat may occur within area
Calyptorhynchus lathami lathami South-eastern Glossy Black-Cockatoo [67036]	Vulnerable	Species or species habitat known to occur within area
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat may occur within area
Climacteris picumnus victoriae Brown Treecreeper (south-eastern) [67062]	Vulnerable	Species or species habitat may occur within area
Cyclopsitta diophthalma coxeni Coxen's Fig-Parrot [59714]	Critically Endangered	Species or species habitat may occur within area
Erythrotriorchis radiatus Red Goshawk [942]	Endangered	Species or species habitat likely to occur within area
Falco hypoleucos Grey Falcon [929]	Vulnerable	Species or species habitat likely to occur within area
Gallinago hardwickii Latham's Snipe, Japanese Snipe [863]	Vulnerable	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Geophaps scripta scripta Squatter Pigeon (southern) [64440]	Vulnerable	Species or species habitat may occur within area

1 PURPOSE

This report is designed to assist in identifying the location of matters of national environmental significance (MNES) and other matters protected by the Environment Protection and Biodiversity Conservation Act 1999 (Cth) (EPBC Act) which may be relevant in determining obligations and requirements under the EPBC Act.

The report contains the mapped locations of:

- World and National Heritage properties;
- Wetlands of International and National Importance;
- Commonwealth and State/Territory reserves;
- distribution of listed threatened, migratory and marine species;
- listed threatened ecological communities; and
- other information that may be useful as an indicator of potential habitat value.

2 DISCLAIMER

This report is not intended to be exhaustive and should only be relied upon as a general guide as mapped data is not available for all species or ecological communities listed under the EPBC Act (see below). Persons seeking to use the information contained in this report to inform the referral of a proposed action under the EPBC Act should consider the limitations noted below and whether additional information is required to determine the existence and location of MNES and other protected matters.

Where data are available to inform the mapping of protected species, the presence type (e.g. known, likely or may occur) that can be determined from the data is indicated in general terms. It is the responsibility of any person using or relying on the information in this report to ensure that it is suitable for the circumstances of any proposed use. The Commonwealth cannot accept responsibility for the consequences of any use of the report or any part thereof. To the maximum extent allowed under governing law, the Commonwealth will not be liable for any loss or damage that may be occasioned directly or indirectly through the use of, or reliance

3 DATA SOURCES

Threatened ecological communities

For threatened ecological communities where the distribution is well known, maps are generated based on information contained in recovery plans, State vegetation maps and remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species

Threatened, migratory and marine species distributions have been discerned through a variety of methods. Where distributions are well known and if time permits, distributions are inferred from either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc.) together with point locations and described habitat; or modelled (MAXENT or BIOCLIM habitat modelling) using

Where little information is available for a species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc.).

In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More detailed distribution mapping methods are used to update these distributions

4 LIMITATIONS

The following species and ecological communities have not been mapped and do not appear in this report:

- threatened species listed as extinct or considered vagrants;
- some recently listed species and ecological communities;
- some listed migratory and listed marine species, which are not listed as threatened species; and
- migratory species that are very widespread, vagrant, or only occur in Australia in small numbers.

The following groups have been mapped, but may not cover the complete distribution of the species:

- listed migratory and/or listed marine seabirds, which are not listed as threatened, have only been mapped for recorded
- seals which have only been mapped for breeding sites near the Australian continent

The breeding sites may be important for the protection of the Commonwealth Marine environment.

Refer to the metadata for the feature group (using the Resource Information link) for the currency of the information.

CODES

I - Y indicates that the taxon is introduced to Queensland and has naturalised.

Q - Indicates the Queensland conservation status of each taxon under the *Nature Conservation Act 1992*.

The codes are Extinct (EX), Extinct in the Wild (PE), Critically Endangered (CR), Endangered (E), Vulnerable (V), Near Threatened (NT), Special Least Concern (SL) and Least Concern (C).

A - Indicates the Australian conservation status of each taxon under the *Environment Protection and Biodiversity Conservation Act 1999*.

The values of EPBC are Extinct (EX), Extinct in the Wild (XW), Critically Endangered (CE), Endangered (E), Vulnerable (V) and Conservation Dependent (CD).

Records - The first number indicates the total number of records of the taxon (wildlife records and species listings for selected areas).

This number is output as 99999 if it equals or exceeds this value. A second number located after a / indicates the number of specimen records for the taxon.

This number is output as 999 if it equals or exceeds this value.

Appendix D

Protected Plants Clearing Permit

Notice of Decision

Section 86 of Nature Conservation (Plants) Regulation 2020

This notice is issued by the administering authority to advise of a statutory decision on a permit application

To: MIRVAC QUEENSLAND PTY LIMITED
80 Ann St
BRISBANE CITY
QLD 4000
Australia

Our reference: APP0131228

Dear Sir/Madam

Re: Decision made in relation to your application

Your application received on 08 July 2024 has been assessed and the decision in regards to your application is specified below:

Permit applied for	Permit number	Decision
Protected Plant Clearing Permit, Clearing endangered, vulnerable or near threatened plants	WA0062493	GRANTED

Your application for a permit has been granted, the conditions of approval are attached.

Your permit reference is WA0062493.

Please note that for the approval, this Notice of Decision and the relevant attachments constitute the permit documentation. Please retain this approval documentation for your records.

Included with this notice is advice on review and appeal processes that may be available to you. Should you seek a review or appeal, you are advised to seek independent advice before taking such action.

Should you have any queries in relation to this notice, please refer to the contact details below.

Nature Conservation Legislative Requirements and Conditions

Legislative Requirements

- PPCLR01 This permit does not exempt the permit holder from obtaining other approvals relevant to the harvest of whole protected plants at the site.
- PPCLR02 Activities carried out under this authority apply to non-protected areas only.
- PPCLR03 This permit includes the clearing of least concern protected plants within the clearing area.

Conditions

- PPCM02 The permit holder is to notify the department in writing at least 48 hours in advance of clearing commencing, for example, via an email to wildlife.management@des.qld.gov.au
- PPCC001 This permit approves the clearing impact area of 164.97ha, with fifty-five (55) individuals of *Melaleuca irbyana* to be directly impacted and authorises the clearing of plants and species in the clearing area that were not specified in the Flora Survey Report.
- PPCM001 Activities relating to the impact of the threatened species listed on this permit must be in accordance with the procedures and actions outlined in the following documents, except where conditions below indicate otherwise:
- “Impact Management Plan, *Melaleuca irbyana*, Renewal for Permit No. WA0045420, 432 – 520 Greenbank Road, Greenbank, Prepared for Mirvac Queensland Pty Ltd, 16 August 2024, Job No. 7598 E”, associated appendices and any other supporting documentation submitted to the department in relation to application number APP0131228 lodged electronically on 08 July 2024.
- PPCP003 ADVISORY INFORMATION NOTICE: Clearing is to be conducted in a sequential manner and must be conducted in a way that directs escaping wildlife away from the area and into adjacent natural areas. A licensed spotter/catcher must be employed where there is a risk to native fauna present within the clearing site. The permit holder must ensure any injured animals are referred to an appropriate wildlife carer group or veterinarian.
- PPCP004 Rehabilitation and/or translocation reporting advising of the progress and outcome of impact management measures to the habitat and/ local population of the listed protected plants must be maintained from the commencement date of the impact management program and continue until the expiration of the permit.
- The written report (including advice on each monitoring period) must be lodged with the department via an email to wildlife.operations@des.qld.gov.au within 10 business days after each annual period.

Information Sheet

This information sheet is issued by the Department of Environment and Science (the department) to advise of a statutory decision on a permit application under the *Nature Conservation Act 1992* (the Act).

When assessing an application for a licence, permit or other authority, the chief executive must have regard to the following matters under the following laws:

Section 104(1) of the Nature Conservation (Plants) Regulation 2020

- (a) whether the chief executive is restricted from granting the authority under chapter 5, part 1 or chapter 4, parts 3 to 7;
- (b) whether the applicant is a suitable person to hold the authority;
Note - See also division 2 for when a person is not suitable.
- (c) the impact the activities proposed to be carried out under the authority may have on the conservation of native wildlife;
- (d) the effect the grant of the authority may have on the fair and equitable access to nature, in particular, the ecologically sustainable use of wildlife;
- (e) any contribution the applicant proposes to make to the conservation of nature;
- (f) any relevant Australian or international code, instrument, protocol or standard or any relevant intergovernmental agreement;
- (g) the precautionary principle;
- (h) public health and safety;
- (i) the public interest;
- (j) any recovery plan for a plant to which the authority is proposed to apply;
- (k) for a plant authority, proposed to take effect immediately after an existing plant authority of the same type ends—
 - (i) whether the existing plant authority was obtained on the basis of false or misleading information; and
 - (ii) whether the holder of the existing plant authority, or a relevant person for the holder, has failed to comply with a condition of the existing plant authority;
- (l) for an Aboriginal tradition authority—any advice given by the corporation named in the application on the significance, under Aboriginal tradition, of the activity the subject of the application;
- (m) for an Island custom authority—any advice given by the corporation named in the application on the significance, under Island custom, of the activity the subject of the application;

To advise of a statutory decision on a permit application under the Nature Conservation Act 1992

- (n) any other matter stated in a conservation plan as a matter the chief executive must have regard to when considering an application for the authority.

Section 104(2) of the Nature Conservation (Plants) Regulation 2020

Without limiting subsection (1), the chief executive may have regard to anything else the chief executive considers appropriate to achieve the object of the Act.

Note – See also section 137 of the Act

Section 137 of the Nature Conservation Act 1992

(2) A licence, permit or other authority issued or given under a regulation to—

- (a) take, use or keep protected wildlife; or
- (b) abandon, release, keep, use or introduce international or prohibited wildlife; must be consistent with—
- (c) the management principles for the wildlife; and
- (d) the declared management intent, or conservation plan, applicable to the wildlife.

In assessing your application, consideration has been given to each of the relevant matters listed above.

In some cases some conditions have been imposed on the resulting permit/licence. Please take the time to familiarise yourself with these requirements. In other cases, your application may have been refused.

Should you have any questions regarding any these decisions please contact the Department of Environment and Science using the contact details provided to you on your notice of decision.

Review of decisions

Part 8A of the Act provides for internal and external reviews, should you be dissatisfied with any reviewable decision. In summary these include:

- If you wish to apply for an internal review of an original decision, the application must be made in the approved form within 28 days after being given this information notice;
- The application must be supported by sufficient information to decide the application;
- The application for internal review does not stay the decision made. However you may apply to the Queensland Civil and Administrative Tribunal (QCAT) for a stay of the decision;
- The department must review the decision within 28 days of receiving the application and provide you with a decision through a QCAT information notice that complies with the *Queensland Civil and Administrative Tribunal Act 2009*, section 157(2);
- If you are dissatisfied with the internal review decision, you are able to file an application for an external review in the registry of the QCAT within 28 days of receiving the internal review notice.

For further information you are directed to Part 8A: Review of decisions of the *Nature Conservation Act 1992* and *Queensland Civil and Administrative Tribunal Act 2009* which can both be found at www.legislation.qld.gov.au

To advise of a statutory decision on a permit application under the Nature Conservation Act 1992

Also please note:

Should it be determined at some future date by any Court or Tribunal that Native Title exists over the subject land or waters, this permit may be terminated and the holder (or any subsequent holder) may be required to remove any works established under this permit at the permit holder's (or any subsequent permit holder's) own cost, expense and risk. In that event, no compensation for works, development costs or loss of income shall be payable to the permit holder (or any subsequent permit holder) by the State of Queensland.
