

2 March 2026

To whom it may concern,

I write to formally confirm the waste management arrangements applicable to the Griffith University Gold Coast Campus in support of the relevant planning compliance condition for the new HATRIC building.

The campus operates under a centrally managed waste management system administered by Griffith University Campus Operations. Waste services across academic, research, commercial, and public facilities are delivered in accordance with University sustainability objectives and applicable local authority requirements.

Under the University's existing waste services contract, Crown Waste Solutions is engaged to undertake the collection and removal of all general waste and recyclable materials generated across the campus.

For the HATRIC building, the following operational framework will apply:

- All general waste and recycling generated within the HATRIC building will be removed internally by ISS as part of routine building services.
- ISS will transport these materials to the designated central campus waste management area.
- At the central waste area, materials will be segregated in accordance with established campus waste separation procedures.
- Following consolidation and segregation, Crown Waste Solutions will undertake the collection and lawful disposal or recycling of materials in accordance with the University's existing contractual arrangements.

The HATRIC facility will therefore operate fully within the established campus-wide waste management system. No separate or independent waste collection infrastructure is proposed. All servicing will utilise existing waste storage areas, infrastructure, and approved service vehicle access routes.

These arrangements ensure operational continuity with current campus practices and satisfy the applicable planning compliance requirements relating to waste management.

Please advise if any further clarification or supporting documentation is required.

Thank you,

Michelle van der Hoven,
Business Development Manager,
Crown Waste Solutions
