Dear Sameh

**RE: DIAPHRAGM WALL CONSTRUCTION
HIGH RISE MIXED USE DEVELOPMENT
19 HERCULES STREET, HAMILTON**

Following recent discussions and based on the results of numerous geotechnical investigations conducted by Butler Partners Pty Ltd on the site and on adjacent sites (e.g. Portside, Hamilton Harbour etc.) we write to confirm that the site is underlain by deep deposits of alluvial soils, with a relatively shallow groundwater table.

It is understood that a diaphragm wall is proposed (or being considered) for use to provide temporary and permanent support to the six to seven level basement excavation proposed for the site.

As discussed, it is considered that a diaphragm wall is well suited to the site ground conditions and that the installation of the wall should not adversely affect adjacent buildings/streets etc., if the diaphragm wall is constructed to appropriate (and normally adopted) standards.

If you require any additional information or clarification please don't hesitation to contact the writer.

Yours faithfully
BUTLER PARTNERS PTY LTD

BRUCE BUTLER
Senior Principal
